1. Welcome to the Skywaves MW DX Group!

Yahoo group: skywavesmw
Date: 2005-10-15 20:25:53 UTC
From: John Faulkner
Topic: 1 Message: 1

This is a new forum for medium wave DX DXers around the world.

Please feel free to browse our posts, report your own DX news and loggings or pass on your comments and DX tips.

John Faulkner

From: John Faulkner
Topic: 2 Message: 2

With the west coast of canada being received in Carlisle and here in the Midlands earlier this morning, not to mention the continuing run of quiet conditions, the next 24 hours could again bring in some exotic DX!

Good DX all!

600 CBNA St Anthony NF. CBC English service // others Good
00:33 16/10 JF
750 CBGY Bonavista Bay NL. CBC English service // others Weak
00:33 16/10 JF
1150 CHGM Gaspé PQ. Presumed with French discussion. Time is
approx due to losing my overnight
recording. Weak 06:15 16/10 JF
1320 UNID French programme. "Vous ecoutez ... ???" far too quick
for my ears - even from the
recording. Weak 01:19 16/10 JF
1470 UNID Gospel station. Lots of lengthy "hallelujah" type songs
with ID but I lost this due to
losing my overnight recording. Approx time. Good peaks 06:00
16/10 JF
1540 ZNS1 R Bahamas, Nassua. "News from PRI" programme with
British-English accented announcers,
over WDCD V Good 23:19 16/10 JF
1670 UNID Fox Sports ID near top of the hour. Time is approx due
to losing my overnight
recording. WTDY Madison WI? Weak 05:30 16/10 JF

At 02:06 GMT micro$oft windows decided to do a security update and
rebooted my laptop, thus
terminating my recording on RecAll-PRO. (thankfully it saves what
has already been recorded) I
thought I'd switched off the wireless connection, as I usually do.
All recordings after this time
were therefore lost and I know there were several IDs, including 1150
and the gospel station on
1470. Determined not to be beaten by the evil micro$oft corporation
I'm still going to claim the
loggings but all details are from memory. NEVER TRUST MODERN
TECHNOLOGY !!! ;0)

Conditions - on the whole they didn't sound particularly great
compared with previous nights. I
monitored 1320 again until the above disaster. CKEC was generally
dominant. A French station
appeared at 01:19 with a "Vous ecoutez .... ????" ID -
http://www.skywaves.info/2005/1320-0119gmt-16-10-05.mp3 which was too
quick for my ears. Presumed
CJMR then appeared at 01:40 with Indian music. There were two pop NA
stations at times. one being
CKEC, but the other one will forever be a mystery.

Good DX!

9. Recent Loggings

Yahoo group: skywavesmw
Date: 2005-10-16 04:27:57 UTC
From: John Faulkner
Topic: 9 Message: 9

Just for the record, I thought I'd post my DX loggings "so far" this season. Conditions have been
very good since the end of September and I must say I haven't had a log (from home) like the
following for quite a few years.

My receiver is an AOR 7030 (early model - no frills other than I had a 1.8kHz crystal filter fitted
last year). My aerials: a Wellbrook ALA1530 at 8ft agl on rotatable mast; approx 200' longwire
running east.west, both running into a homebrew antenna phaser. Datong FL3 audio filter.

I tend to record one or two channels overnight (just changing frequency midway through the night)
with very little listening actually done "at the dials". My recirdings, until last week, have been
done on a Sharp "Extraplay" nicam hi-fi video recorder, which allows up to 12 hours recording on
E240 cassettes. I began using RecAll-PRO on my laptop last week which records to mp3 standard.

Hi Guys,

Has anyone tried a ferrite loopstick aerial like the one's found in a portable set with a Comms receiver ??

Its something I've often thought about but never tried.
My Trio R600 isn't as sensative as it once was so it needs a bit of a boost, especially as I dont realy have room for a long wire outside.
I did think about joining 5 slinky springs together but strangely the Mrs doesn't think of aerials as works of art as I do.

Has anyone ever tried one of these & are there any similar ones available from else where ??? http://www.russandrews.com/product.asp?lookup=1®ion=UK¤cy=GBP&pf_id=5740&customer_id=PAA16081012054 29CDRIXGUQYIJBDCJH .

First logging, 1595 Khz Unmodulated carrier from Nokia freeview box!!

Happy Dxing

Nigel

Hi Nigel
I use a fine commercial version of a ferrite unit from the US
It is the Quantum Pro from Radio Plus.
They are made to order.
I also have the Quantum Phaser.
The pro version covers LW/MW 150kHz to 3MHz but the standard version for
MW is available at a cheaper cost.
The ferrite heads are interchangable, with the MW rod giving sharper nulls.
It has switchable controlable feedback as standard,which is useful on a
weaker station.

I also own the AOR unit LW to 30MHz which uses ferrite for the MF and
loops for 2MHz to 30MHz.

the Quantum Pro beats this hands down on LW & MW with better nulls and
adequate gain.

Why not build your own with a FET amp and a buffer stage and see for
yourself

Not tried Slinkies but have a collection of Tuned Loops, Active and
passive, all but 2 home built.
regards
dave

1050 WEPN New York City NY. Sports, then sports and even more sports, ID heard. V Good 23:40
16/10 JF

There, that was exciting wasn't it! My solitary logging for last night! I didn't note anything
particularly good overnight so I set myself a challenge to ID everything on 1010 1020 1030 & 1050,
all of which were producing audible English talk. I managed WEPN only. 1030 kept coming up to very
good levels around 23:30 - 00:00 but seemed to die after this. Two stations mixing on 1010 and
1050. All this before midnight GMT.

After midnight I heard English speech on 1090 1100 1110 & 1120 though these did not last long. I
set the recorder going on 1390 for most of the night and moved to 1470 at 04:00. Latins on both
channels but the only one I ID'd was CPN R in Peru on 1470.

;0(

Hope y'all did better than me!

Good DX!

From: John Faulkner
Topic: 15 Message: 15

A warm welcome to all! Thought I would "start the ball rolling" by asking a few question and saying a little about myself.

How long have you been interested in the MW DX hobby? Perhaps you'd like to share details of your receiving equipment and aerials with us or even your best catches.

My medium wave interests go back to the mid-70s when I used to DX with my father's Trio 9R59DE valve receiver (and VERY unstable it was too!). Odd that this inferior valve receiver got me my best ever medium wave catches back then, but of course the bands were relatively empty. I moved up to a Marconi CR100/2 in the 80s which made a big improvement, but I remember the congestion was starting to be a problem even then. In the 90s I bought an original Racal RA17. These days I use the AOR AR7030 but often wonder what it would have been like to be using it back in the 70s.

Finally, to paste in the forecast from Jan Alvestad (http://www.dxlc.com/solar/) ...

"The geomagnetic field is expected to be quiet to active on October 17 due to a low speed stream from CH192. Quiet is likely on October 18-20."

Looks like reception could be about to improve again.

Good DX!

From: Dario Monferini
Topic: 16 Message: 16

Hi to all ,
greetings from Italy.
I am in the listening hobby from 1970 and I started with a little Italian portable paied 10 Euro .... but in that period MW resulted more quiet and on 1010 kHz I had the joy to get WINS for first time in Italy .... opening the North American listening SAGA to Italy...
I changed many receivers... but the best for MW has been the DRAKE SPR4.... unfortunatly equipped not with all SW quartz....
in these years 1977-1979 I used a Cardioid loop antenna made by a friend of mine (I admit I am around zero in technical matters...hi)
This offered phantastics catches on MW.... like 900 kHz CBC Barbados, Air Cuddapah , Radio Cali Colombia, XEW Radio Mexico..... naturally the night RAI MILANO usually was off the air for maintnances (still is doing this also now !!!) but in the 70's 900 kHz becomed free and it was thrilling to try this channel....
In the 1985 I changed to JRC 525 equipped with cristal filter 3,00 kHz made in Japan for RAI ITALY which ordered 50 of these filters and utilized only 30.... this filter is perfect for MW listening.
My loop changed to a normal 90 cm loop not amplified.
Need to explain I live at 7 floor of a building with open glittering sky line view towards north west....
Reception on MW gradually becomed worse and worse... more noise from my building electrical system... more line computers...fax line
.... alogena lamps .... so often if I have the possility I go to Dx outside Milano area with my good friend Giampiero Bernardini living in Milano, we go to Liguria coast in the area called "5 terre" ....
That's all folks ..... now the mike is yours...please....

Before to close this message I may say the K-index today is going up ...finally ...this is the signal ... on MW will be more stations to catch on coming nights....
The mid-latitude K-index at 1500 UTC on 17 October was 3 (26 nT).
The mid-latitude K-index at 1200 UTC on 17 October was 3 (28 nT).
The mid-latitude K-index at 0900 UTC on 17 October was 4 (57 nT).
The mid-latitude K-index at 0600 UTC on 17 October was 4 (48 nT).

Good dxs !
Dario

Hi,
I haven't actually done any MW DX for a number of years but have been looking for something to fill in the gaps during the winter months when FM DX is almost non-existent.
A few years back I used a Sony SW7600 with an external homemade tunable loop antenna for MW DX as published in Short Wave Magazine and can remember getting some reasonable results with CJYQ (St Johns Newfoundland) and WINS (New York ?). I did have other successes but never bothered logging anything seriously so those two are simply the ones that stick out in my mind.
I still have the Sony SW7600 but am currently on the look-out for a decent desktop receiver with appropriate coverage but am totally unsure what to go for. As for antennas I'm am not sure either; do I go for an external tunable loop as before, an external active antenna or longwise I just do not know.

Regards

Lynton

Subject: [skywavesmw] Introduction

A warm welcome to all! Thought I would "start the ball rolling" by asking a few question and saying a little about myself.

How long have you been interested in the MW DX hobby? Perhaps you'd like to share details of your receiving equipment and aerials with us or even your best catches.

My medium wave interests go back to the mid-70s when I used to DX with my father's Trio 9R59DE valve receiver (and VERY unstable it was too!). Odd that this inferior valve receiver got me my best ever medium wave catches back then, but of course the bands were relatively empty. I moved up to a Marconi CR100/2 in the 80s which made a big improvement, but I remember the congestion was starting to be a problem even then. In the 90s I bought an original Racal RA17. These days I use the AOR AR7030 but often wonder what it would have been like to be using it back in the 70s.

Finally, to paste in the forecast from Jan Alvestad (http://www.dxlc.com/solar/) ...

"The geomagnetic field is expected to be quiet to active on October 17 due to a low speed stream from CH192. Quiet is likely on October 18-20."

Looks like reception could be about to improve again.

Good DX!

John

Hi to all, I´m Jordi Brunet from Barcelona and I was an MW-DXer during a lot of years (1982-1999), but now I´m a MW-DX er "out of order". My receivers, Kenwood R-600 and R-5000 must to be send to repair and where I live now I haven´t aerial for DX... my 1 meter loop is destroyed :(
Now I hope to receive a portable a DEGEN 1103 to reestart this hobby.
During nights I catch a lot of american MW stations, the best DX-MW day was during a DX-expedition in Ciudad Real, a lot of american MW stations were present!!!!
In few days I will scan some historic MW-DX QSL´s ;)

Frome years ago I collaborate with WRTH to update the spanish MW list.

73+DX!!!!

Topic: 18 Message: 20

Hi Everyone

My name is Ian

My interest in MW DX stems back to 1966 when the bands were not so crowded.

Although I would not consider myself a enthusiast I usually spend many a winter night trawling MW/LW
bands.
My main interest on MW is trying to copy Canadian and USA BCasters.
Best DX was Winnipeg about 6 or 7 yrs ago roundabout 680khz I think.

I also try to work DX on Topband 1810-2000khz as a licenced amateur although 60x20ft garden size offers many restrictions.

Since last yr I have spent many happy hours monitoring NDB beacons on the Longwave 200-500KHZ
Best dx NDB's Newfoundland Cape Verde Azores Ukraine.

My current Receivers are my Amateur Transceivers FT1000D TS2000 which are quite good on LF
Antenna is a 125ft Inv L tuned to 1830khz but wrks nicely as a long wire on MW/LW.

Many Thanks to John Faulkener for settting up the forum.

Looking forward to exchanging information DX in the coming future.

Regards Ian QTH Blackpool UK

21. My MW-DX history.

Yahoo group: skywavesmw
Date: 2005-10-18 18:31:37 UTC
From: Tim Bucknall
Topic: 18 Message: 21

Hi All,
My Name is Tim,
I live in a town called Congleton in the N.W of England,
i started dxing when i was 12 either very late 1990 or early 1991, I was tuning around during the 1st Gulf war anyway.
I was sick at home from school one day, so i decided to have a tune around MW on my Cheap analogue "Boots" radio/cassette player.
I don't know why, i guess i was just looking for something to listen to
I managed radio Cumbria on that Very first day during Daylight hours, I'm still not quite sure how!
after that i just kept at it.
I got my first Real Radio for my 13th Birthday in Sept 1991 a Sony ICF2001D, which lasted for about 8 years.
and was probably the best MW portable ever
My First Transatlantic ID was CJYQ 25th Jan 1992 barefoot on the Sony ICF2001D
i got a proper indoor loop in 1996
and finally an outdoor welbrook loop in 1998
when the Sony finally gave up, i got an Icom IC-R75
over the years i've dipped in and out of MW dxing as other parts of the hobby have become dominant, but i've recently got back into it after a dissapointing year for FM & TV

best regards tim

... at least that is the hope!

The geomagnetic figures list today as unsettled but conditions are set to return to quiet between the 19th - 23rd.

Nothing of any great interest noted last night here. 1390 had the usual WEGP Presque Isle, Maine and 1470 had a good signal from R Vibracion, Carupano (Ven) around local sunrise.

Asiatic DX continues to be reported elsewhere in the late afternoon.

Good DX!

27. Conditions Overnight

Yahoo group: skywavesmw
Date: 2005-10-19 10:38:33 UTC
From: John Faulkner
Topic: 27 Message: 27

Only one log for the logbook ...

1390 YVZA R Fe y Alegria, Caracas ID in speech. Weak 04:59 19/10 JF

Other stations heard which are also in the logbook include ...

930 CJYQ St Johns NL

1280 WFAU Gardiner ME

1320 CKEC New Glasgow NS

1370 WDEA Ellsworth MA

1450 Atlantic City NJ

1510 WWZN Boston MA

Certainly *some* improvement in overall reception overnight, partucularly towards sunrise.

Monitored 1320 to begin with and heard a weak pile-up with CKEC popping up every now and again.
Also two (possibly three) Latin stations, one with phone in after midnight GMT, the other with
lively LA rhythms. Beautiful splatter-free channel tonight too!

At 01:45 I moved to 1390 as it seemed quite lively.

I think WPLM Plymouth MA was present at 03:00 - station playing back to back oldies, straight over
the toh as usual for them but still no ID after that and straight into the next song. Another
abrupt fadeout - DX on 1390 started to fade out at 06:30 and was almost gone ten minutes later.

Around 06:00 I had a check on other channels and heard US speech on 610. I suspect this is WIOD
Miami but no ID heard. Would be nice as this has not been logged here before.

If the forecasts are correct tomorrow morning should be much better.

Good DX!

John
john.faulkner@...

Central England, AOR AR7030 with Wellbrook ALA1530, 200' (approx, I must measure this) longwire
running E/W, antenna phaser.

28. Re: Introduction

Yahoo group: skywavesmw

From: John Faulkner
Topic: 15 Message: 28

Hello all! Thank you for your "introductions". It's been very interesting to read your accounts.

It is really good to see a nice lively beginning to the new group. We have an excellent spread of members right across Europe and beyond. In fact the large majority of members, so far, are joining from the European mainland which is very encouraging. We look forward to reading your DX logs in the coming winter months.

We should now be sliding down the slope towards the next solar minimum and conditions for the first half of October would appear to confirm this with many strong signals being received here at home from across the Atlantic.

I plan to go on at least one winter DXpedition to the west coast of Wales (or further north) in the coming months where I hope to catch some exotic DX.

I wonder how many of you venture out, DXing mobile from you cars? It is good to take advantage of open countryside for the erection of beverage antennas, far away from power lines and interference.

So long for now. Best DX to all.

John
john.faulkner@...

Hi all,

knew things would be interesting last night listening to Long Wave around 2 am Iceland on 189 was coming in very nicely when I decided to have a tune about and came upon Turkmenistan on 279 coming in quite strong - at first I thought it was Turkey but then worked it out. First time Ive heard this on Long wave....is it rare??.

Medium Wave was in good shape later, but I really need a better receiver and a loop. I was using a yaesu frg7700 with longwire fed through a balun (one which is MUCH quieter than the rf systems mlb see http://www.geocities.com/qrp_baluns/QB-10I.html - sells cheap on American ebay)

later

VOCM 590
CBNA 600
CHNC New Carlisle PQ 610
Possibly Greenland 650
WFAN 660
R. Rebelde, La Julia, Cuba. 710 // 5025
WOR 710
CJCH 920
CJYQ 930
CBI 1140 (S9+20 at one time)
WEGP 1390
WDHP US Virgin Isles 1620

lots of others heard trying to get through the splatter but didnt spend much time trying with them - a number on the extended band but its very very noisy with me here.

I wonder can some of you guys with AOR7030's tell me just how good they are on MW in terms of their filters etc. Ive been very tempted by an AOR7030 plus for a long time but yet to make up my mind.

I really am in an excellent place here for MW so a good receiver would really bring some interesting stuff I feel. No space for beverages alas but I think Im going to give EWE's a go.

regards for now

From: John Faulkner
Topic: 27 Message: 30

If you're thinking about upgrading the receiver, how about a Lowe HF225 Europa? Just a thought as this had an excellent reputation as an AM DX machine.

My friend works for Lowe, not sure how easily available second hand these things are these days though he should know. I can say they are a very good match to the AR7030 having used one a few years ago. The HF150 is also worth considering though perhaps not quite such a good receiver.

Just my 2p worth Paul.

Following correspondence with Jack Weber from the MWC, he seems to think my talker on 610 earlier was very likely WIOD. I suspect this isprobably the case though I'm not logging it for definite as I never heard an ID or any other clues. They were talking about the forthcoming threat from hurricane Wilma.

Anybody getting any Asiatic DX so far today?

Cheers

I certainly agree with John about the Lowe HF 225 Europa, I have one here which I am currently using as a standby since the backlight on my AOR7030 recently stopped working, making it difficult to read the dial (it appears to be a circuit fault not the actual LEDs that have gone). The only drawback with the HF225 is that the display only reads out the the nearest kHz, so offsets can't be measured accurately - but its fine for general MW and HF listening.

By the way the Lowe HF250 is a different matter altogether - avoid it.

Regards
Dave
Caversham, Berks.

CBI 1140 (S9+20 at one time)
WEGP 1390
WDHP US Virgin Isles 1620

lots of others heard trying to get through the splatter but didnt spend much time trying with them - a number on the extended band but its very very noisy with me here.

I wonder can some of you guys with AOR7030's tell me just how good they are on MW in terms of their filters etc. Ive been very tempted by an AOR7030 plus for a long time but yet to make up my mind.

I really am in an excellent place here for MW so a good receiver would really bring some interesting stuff I feel. No space for beverages alas but I think Im going to give EWE's a go.

regards for now

Paul Logan,
Lisnaskea, N. Ireland.

There is currently two Lowe 225's for sale on ebay one currently at
£121.00 and another at £72.00
if you do a search on ebay they will come up
regards
Mark P

Topic: 27 Message: 34

Hi Paul,

I've just been talking to my friend at Lowe Electronics and they sold an HF225 Europa only last week. They are not manufactured anymore as you probably know but you should be able to get your hands on a second hand Europa for about £200 on eBay, maybe less. The HF150's usually go second hand for around £150.

The AR7030 has come to be recognised as the best receiver of its kind in the world by many of the major manufacturers. This can of course be debated. Even matching the expensive Watkins Johnson model (I forget the number)

The passband tuning on the 7030 is very good but I have heard better - on one of the Drakes for instance.

If you can afford it, go for the AR7030. Otherwise the Europa is probably *almost* as good for medium wave DXing. The NRD545 is superb too - I did a side-by-side comparison between this and the 7030 before the 545 was available to buy. One thing I will say about the 545 is that I found the constantly variable IF selectivity did nothing to let me hear any more DX catches than the 7030 - I thought it might have done.

I have added a 1.8kHz crystal filter to my 7030 but find I still mostly use the standard 2.1kHz filter for MW DXing.

For me, the strong selling point of the 7030 is it's unbelievably quiet noise floor. You really appreciate this when you take it out to an electrically noise-free environmant, like out in the countryside, and hook up a beverage. There is so little noise that, if you tune to an empty channel, you'll think the radio is dead. The weakest of weak signals can be heard with clarity in SSB when it's this quiet.

Hope this helps Paul. What about any other receivers folks?

John

Hi,my name Is Mark Pratt,I live in a town called Exeter in the county of Devon in England,I really have just a passing interest in mw as my main interest is fm I started with mw because remember listening to radio 1 and radio luxemburg on a tranny under the bed covers at night in the 70's and early eighties ,I progressed to fm in the mid eighties,but then in 1991 I brought a philips d2935 reciever with ssb and coverage non stop from 146 to 29.999 mhz and admittingly I haven't recieved any Americans etc, but 810 bbc scotland at night also vatican or italian radio on 1530 radio wvyren think I spelt this wrong on 1530 at night,1512 wavre belgium 1521 arabic assumed dubai all at night etc to some people I know this isn't dx but it is to me.. also Isle of wight radio when they used to be on 1242 during the day around midday etc

No they are all CW Mark.. various frequencies
between 200-500khz.
Some have tone followed by cw id.
Some are just carrier wave.
Speeds vary between 5wpm and 17wpm approx.
Great way to learn cw or just right carriers dwn and look at a cw chart.
They just repeat

1100 WTAM Cleveland, Ohio. Many IDs at top of the hour Good 07:00 20/10 JF
1150 CHGM Gasp?, Quebex. French phone in // 610 Fair 23:41 19/10 JF
1400 CBG Gander, Newfoundland. CBC ID Good 06:49 20/10 JF
1640 WTNI Biloxi, Mississippi. Coast 2 Coast talk show with George Noory Weak 06:35 20/10 JF

Tried to stay awake as much as reasonably possible. Lots happening across the band and LOTS of
North American activity, many stations at VERY GOOD levels. Certainly my best morning so far this
season!

I monitored 1060 from 03:00 to 05:50 but no ID's were forthcoming. There were two stations there -
a North Ameircan talker slightly off channel and a Latin talker which mentioned Cuba.

920 became intresting at 06:00 with an echo on Broadcast News. I presume one of these was CJCH but
the second one remeined a mystery, however, immediately BN finished I recorded a clear CKNX ID. My
first ever logging of CKNX!

Others / also logged previously this month ...

700 WLW CIncinnati, Ohio
820 Suspect WBAP Fort Worth, Texas again
1020 Talker, Probably KDKA Pittsburgh, Penn.
1190 EE Talk Good at 23:45 suspect WOWO Fort Wayne, Indiana?
1200 EE Talk Good at 23:50 Suspect WOAI San Antonio, Texas
1360 Probably WKAT ID (Miami). I'd like to hear this one again before logging it. Recording

was
ony 50% convincing. ID was shouted.
1420 Latin dominant at 06:24

Plus many, many others, but as always, getting those all-important IDs can be tricky.

CONDITIONS ARE FORECAST TO REMAIN QUIET UNTIL OCTOBER 23RD

Good DX!

John

Hi John,

very nice logs especially WWL and the Cubans. Tell me when you string out a beverage do you ground it at the far end and through what size of resistor?.

The noise level where I live has gone through the roof - MW is getting very difficult - I have a playing field at the back of my house so thinking of running an on ground short beverage out there to see what its like. Close in to the houses and its a noise nightmare.

Nothing too strange last night - listened to 710 for quite a while listening to WOR CKVO and Rebelde mixing. I need to get a quiet listening site. When mw is open signals strengths here are something else was getting audio on 1210 last night for the first time in years making it past Virgin - looked at the meter and it was 9+30 before virgin trounced it. Probably WPHT Philadelphia which I remember as WCAU back in the 80s.

Think I will go to bed early tonight and get up before dawn.

regards

Paul Logan,
Lisnaskea, N. Ireland.

Hi John,

very nice logs especially WWL and the Cubans. Tell me when you string out a beverage do you ground
it at the far end and through what size of resistor?.

// These loggings were made "at home" with my loop, my 200' longwire, or a combination of both
through my antena phaser.

// Yes, the far end must have a terminating resistor, the value of which needs to be checked and
adjusted. It's usually around 500 ohms but varies with beverage length and height above the ground.
Ideally you should have someone at the receiver and someone at the resistor, tuning it to get the
best null on the Europeans. Working on my own with beverages I am not able to do this so it's a bit
more hit and miss.

The noise level where I live has gone through the roof - MW is getting very difficult - I have a
playing field at the back of my house so thinking of running an on ground short beverage out there
to see what its like. Close in to the houses and its a noise nightmare.

// Noise is a serious problem for me too. I had S9 of electrical crap/buzz/growl, call it what you
will. Even the Wellbrook ALA1530 was picking up a lot of the noise. I sourced some of the noise
and fitted two home-made chokes along the coax feeder for both which COMPLETELY eliminates all
noise. Well, there is always some which gets through from time to time, but I think this is due to
conditions, rain noise, etc.

// These chokes are 20 turns of RG174 coax wound around the now "standard" grey Maplin ferrite.

Think I will go to bed early tonight and get up before dawn.

// Who is Dawn? ;0)

regards

Paul Logan,
Lisnaskea, N. Ireland.

// Cheers

Sorry - just to clarify one paragraph -

"// Yes, the far end must have a terminating resistor"

This refers to the far end of a *beverage*, used out in the countryside, or wherever. I was not
referring to my longwire at home.

I did actually terminate my longwire as it is a reasonable length at approximately 200' and runs
east/west so therefore should have some directional properties when terminated, though obviously not
as directional as a full-wave beverage. Unfortunately my plan was dashed by my neighbours. I had
made use of a path to the rear of the house (not on any of the neighbour's property) and buried at
least 50 metres of coax under the soil, attached this to the east end of the wire via a matching
transformer, terminated the west end, etc. This project took five days to complete and on the sixth
day one of the neighbours, who had obviously been watching my antics, ripped it all up and left it
in a heap on the path. Neighbours - who'd have 'em?

What arseholes, I take it the coax wasnt even visible!

Get your hands on one of those turf cutting thingies
it'll just glide through the soil. push your coax into
the groove and walk over it. (some night at 4am when
the idiots are asleep).

Paul Logan,

// Yes, I had gone to a lot of trouble burying it. None of the wire or coax was visible anywhere.
Earth rods were out of sight and hidden under large rocks, tucked well away underneath hedgerows.

I tried to find a turf cutting device but not even the local B&Q mega-super-ultrastore had anything
like one (hate that place). They had no idea if such a thing existed. They'd probably query what a
hammer wsa for if I asked for one. So what are these turf cutters and where can I get one?

John

Wont be long before we convert you.
MW is getting tough to ride out the qrm.
Might try build myself a K9AY.

My pal is using his 72ft total wire length Quad fed wid 16ft of 75ohm and then 50ohm. This resonates on 14200.

when rotaing the nulling effect on LW/MW is quite amazing
and hes had stuff on this that I cant hear on my 125ft end fed against radials.
Definitely time to try a K9AY thats similar length.

I have same quad unfortunately I find it quite noisey.

I am sure it was you and Tim that were the first to cross the atlantic on MW

Regards Ian

Sounds good Ian.

Perhaps I ought to clarify what bands this group covers, just for the record.

Medium and long wave, including any beacons or NDB in that range. I suppose 0 - 1.8 MHz is about right but it would be interesting to have a top band report every now and again as the propagational characteristics are the same as for the top end of medium wave.

No problems if we go off topic (a little) from time to time also, as all groups do, but strictly speaking this isn't a ham radio group.

You might well convert me to ham radio and top band Ian. For now though I am having a good bash at medium wave broadcast DX and long may it continue.

It's a tough band but somebody's gotta do it!

Hi John,

Well I'll certainly second that!:-) Transatlantic NDB conditions have been excellent over the past few nights, and in spite of the static, last night was really good. I managed to log 24 Canadian NDBs, 2 Canadian DGPS beacons, and one US beacon (CLB - Carolina Beach, NC on 216 kHz). I just wish I could manage to drag myself away for long enough to look for the Medium Wave BC stations!

73 for now, Alan.

Hi all,

perhaps Alan or some of the other NDB dxers might
publish here a short list of NDB's to search for
outside Europe - might spur some of the rest of us on.

Topic: 43 Message: 59

Hi all,

just wondering are conditions particularly good
tonight.

I've just run out my first mini beverage and Im having
quite good results. Its about 250 feet long terminated
with a 1k pot which is set half open so um I guess
this is 500 ohms??? (tell me im wrong someone cos Im
not terribly technical lol)

Europe is down but still there so I guess I could have
it set a little better. Signals from North America are
pretty good - listening to CFMB in Montreal 1280
mixing with a US sports staion. GBG on 1400 is s9 in
the clear.

So my question is - how well is the mini bev
working??.

Any ideas anyone?.

by the way its laying on the ground.

regards-

Paul Logan,
Lisnaskea, N. Ireland.

>Paul Logan,

Hi Paul,

Below is a copy of my 'hitlist'. I usually have all of these in memory channels and check them first. JC Rigolet on 396 kHz is usually a regular here, even when others aren't audible, and Deer Lake DF on 350 is another one that always seems to put in a strong signal. Most of the Canadians have the lower sideband suppressed, so it's generally better to look for them at +400 Hz, e.g. JC would be on 396.4 kHz.

Most Canadians use 400 Hz offsets, but there are a few exceptions, and Deer lake is heard at +1020 Hz, and 2B at -400! The most (only) commonly heard US beacon is CLB on 216 kHz, and Puerto Rico (DDP 390), is another regular T/A catch for many European listeners.

One last shameful plug before the list, I run a 'private' beacon reflector called the 'NDB List', which was started back in 1998, and covers NDBs, DGPS Beacons, Amateur HF Propagations, Navtex, and Cluster Beacons, and anyone with an interest in joining us is more than welcome, we're not really a secret society, honest! Anyone wanting to join can either contact me off list for details, or check out our page at: http://groups.yahoo.com/group/ndblist

End of plug, here's the list!:-)

depends whether it's a linear or logarithmic potentiometer.

Sounds good though ... set it during daylight and go for a maximum reduction on some UK or European off the back of the wire. Probably need someone to help you unless you have a pair of video mobiles etc (one watching the s-meter & one you're watching). Then check with something NW that you haven't killed all signals, eg Iceland or Faroes.

Mark

Topic: 63 Message: 63

Beverages, when set up correctly will REDUCE signals off the back as opposed to ELIMINATE them,
unless you are lucky. Beverages don't work THAT well, it would be nice if they did. Even with the
big beverages used in Sheigra you still get lots of European splatter, though it should be reduced.

The ony thing likely to hamper a beverages perfoermance, I guess, is multipathing of night-time
signals. This renders my antenna phasing system quite useless some nights.

The word on the streets at the moment seems to be "get an EWE antenna". Some DXers have reported
these being more directional than a beverage, though they won't have the same massive gain and low
angle reception as a beverage. I hope to be able to consider one here soon and will conduct some
EWE experiments.

Cyril ... I used the half moon edger to dig the groove for the coax. It took ages. I'm still
hoping to find this magical tool Paul mentions.

Not sure what's been happening on the radio overnight - still to check through my recording. I
recorded 1320 for the first half of the morning and moved to 850 as there were two North American
talkers fighting it out on there, one being WEEI. Conditions didn't seem generally so good as the
previous night though.

Good DX!

64. RAI Milan to begin DRM testing (likely on 693) - sorry if repeated

Yahoo group: skywavesmw
Date: 2005-10-21 08:40:11 UTC
From: Andrea Lawendel
Topic: 64 Message: 64

My address has been bouncing on Yahoo so I'm not sure this went through (if it did, it also had a misleading subject... What a mess).
Sorry if you're reading it twice!

73s, Andy

According to the Italian press wire ASCA quoted, in Italian, on

http://www.mytech.it/news/articolo/idA006012008446.art

Rai Way will soon begin experimenting with DRM via Milano Siziano. Tests will be conducted at nighttime, presumably on the former Radio 2 frequency of 693 kHz. Exact power levels are not mentioned (in the above mentioned news flash the writer says "at low power" adding, however, that will ensure "high quality" and Europe wide coverage). Milano 2 wasn't exactly a
low power plant. Nothing new, really, DRM conversion of the ex Radio 2 transmitter has been planned for a long time as per RAI "insider" Andrea Borgnino. According to the same source, Rai Way begun installing DRM equipment in Milan at end of last year for tests beginning at the beginning of 2005. Apparently these were postponed to end of 2005/beginning of 2006.

67. VERY quiet conditions now!

Yahoo group: skywavesmw
Date: 2005-10-21 16:26:57 UTC
From: John Faulkner
Topic: 67 Message: 67

In a post to the Medium Wave Circle's e-list, General Editor Steve Whitt comments on the current
state of the ionosphere. Conditions are currently about as quiet as they can get!

He also comments that conditions can sometimes be "too quiet". In such cases it may only take take
is a slight disturbance to tip the balance and bring in some exotic DX.

Quiet to active conditions are possible October 23-25 due to the effects of coronal hole CH193.

The next 24 hours could, once again, bring some exceptional transatlantic signals.

Unfortunately for me I have to be out most of the night, collecting our daughter from EM airport.
Taklk about bad timing!

Now then, which frequency to record while I am out? Hmmmm.

Good DX!

Topic: 63 Message: 69

It's a great way to lose one's marbles!

Can you bury some 50 ohm (RG58) coax, or hide it) until you get to the playing field? Just wondering if there was anything you could do to protect the first part, then you could run wire out
or haul it in as and when you require.

The X band is a mystery. It doesn't always follow the conditions on the rest of medium wave. Some
nights you can hear lots up there when the rest of medium wave is lacking TA signals.

Congrats on WLNO 1060. I'm looking for this one myself tonight. Seems it is a daytimer of one of
those stations which drops it's power after a certain time - so a late evening catch with a small
window of opprtunity and then it's gone.

Cheers

John

Paul

Excellent glad the Bevs opening up more DX for you.

I put out a 250ft recently firing ESE the only direction available.

I got back to the shack and started hearing new stuff.

Then it just became noisy so thru the towel only to realise
a kind neighbour had coiled it back up and put it bak in the garden.

It did pass over 2 neighbours gardens then down an alley way.

Regards Ian

Subject: [skywavesmw] Rediscovering Medium Wave / Losing your marbles / the short bev.

Hi all,

what can I say - - why the hell did I never try a
short beverage before! - ok so it has to run on the
ground across a narrow road at the back of my house
and then across a public playing field - but last
night showed me the risk was worth taking. Eventually
the wire will get stolen or broken by kids but I think
in future Im going to regularly put down the short bev
at night and lift it the next day.

I CANNOT express what a revelation this Antenna was
last night - loggings are attached - many other freqs
and signals were heard but these ones were noted. Ive
never seen a beverage work before so excuse my
enthusiasm!. Perhaps I can get someone to help me
tweak the variable resistor tonight.

Signals were good and the antenna quite quiet -
although after dawn the noise came up seriously as my
town woke up for another day.

It seemed deaf above 1600 khz the expanded band freqs
all being quite quiet. Was this conditions or some
failing in the antenna??.

I have attached a text file of logs but perhaps some
of you might help me with these UNID's:

780 CFDR? religious station from ?? Is this CFDR
dartmouth NS?.
970 Unid US station with "CNN Radio News"
1150 Unid Station from Quebec, country music in ff
1150 Unid station from Quebec, talk in ff mixing with
country in ff
1250 Unid US religious station from ??
1280 Unid US Sports station mixing with CFMB
1300 Unid US sports station
1390 Unid SS station with religion.
1430 US Fox sports station. Ads
1450 US sports station.
1510 US station " Newstalk 1510" any ideas?
1540 WDCD? US religious station over CHIN, WDCD or ???
1590 Unid US station with religious programme.

heres hoping for more tonight - if i can stay awake -
looks like Im going to have to rejoin the MWC.

btw - highlights of the night- WTNI Biloxi on 1640 -
WLNO New Orleans on 1060 and-

tuning to 930 expecting CJYQ and hearing CUBA blasting
in instead - incredible!.

regards all

Paul Logan,
Lisnaskea, N. Ireland.

73. loop antennes outside

Yahoo group: skywavesmw
Date: 2005-10-22 08:05:42 UTC
From: mark10538
Topic: 73 Message: 73

I don't have room for a beverage in the garden as it is only about 33ft long,what would happen if I built a loop 33ft long by 6ft high, ie the length of the fence,the fence is roughly north northwest from the house wall.
Mark P
Devon
John I tried the freqs you gave me last night but I didn't hear a thing,I think it's due to a couple of reasons :-
1. no outside antenna just used the sets ferrite rod and an indoor untuned loop
2. think the filters that are in the set are two eide ie bog standard filters and the ssb on normal audioif used with a station pretty close to another station creates a whine so you cannot here the audio as I tried this method as well.

Mark, you'd have an EWE antenna, pointing in the right direction! See
http://home.arcor.de/mschnitzer/EWE-English.htm
http://www.dxing.info/equipment/ewe.dx
Dimensions are non-critical, I can supply the big cores for UKP 2.00 +
postage, so, go for it!

Mark - constructing a medium wave loop would be ideal, but I hate to say that you won't get too far with your portable radio. You really ought to look into a communications receiver.

As it happens, I will be selling a Lowe HF225 Europa via this site in a few weeks, maybe less. This has only just been built by a friend and, while technically "second hand", has never been used. The price he asks is £225.

Alternatively try eBay for an HF150, though not as good. These go for around £150.

Cheers

Topic: 77 Message: 77

740 CHCM Marystown NL. Usual C&W // CKCM 620, etc. Fair 04:32
23/10 JF
1030 WBZ Boston MA. WBZ ID after Boston information Fair 23:34
22/10 JF
1090 WBAL Baltimore MD. Heard nightly for the first three weeks in
October at the side of
TalkSport. Baltimore news and sportstalk Good 23:52 22/10 JF

Some unusual co-incidences between myself and Steve overnight. I too
had an airport run to do, mine
being Birmingham International. Luckily it was only an hours drive
each way and only ten minutes
wait to collect our daughter.

Encouraged by the WLNO reception yesterday I spent most of the night
on 1060kHz. This is not the
easiest of channels to access here though I'm not sure what is
causing the splatter - possibly my
local TalkShite Clipstone relay up on 1071 which is a BIG signal. If
I null this, which is
possible, I can leave CBA in the clear on 1070, albeit with some
Spanish QRM from 1071. But moving
down to 1060 needs some further tweaking of the antenna phaser to
remove a sharp het from 1062, but
this allows some of the splatter back in from TalkShite, so it's a
case of getting the balance just
right and reducing only one of the two evils rather than both
together.

1060kHz
23:00 - 23:40: There were at least two US talkers on the channel
with one being dominant though
neither were much above the general splatter level.

23:40 things lifted up and a station appeared to fair levels with an
ad break, then quickly into
nostalgia/crooning music (Sinatra, etc.) and in-programme promos for
artists appearing "live" in
Brampton, also Broadcast News mentioned and "Praise to the Lord".
Odd thing here is the announcer
said "Let's Take another caller from Pittsburgh, hi you're on the BN
show"

23:45: Serious (or organ?) music, then OM.

More non-descript speech ws heard opn 1060 up to 02:48 when somebody signed on, Denmark? which had
the effect of increasing the het and destroying the 03:00 slot and beyond.

So, not a lot of luck on 1060. Same for 1390 where I moved from 04:00 on returning from the
airport. 1390 remained open up to approx 08:45. Quite a late fadeout for me.

Good DX!

Mark

Not sure but ur looking for between 300-1K variable.
The poorer the natural ground the higher the resistance.
The lower the freq you want to resonate the higher the resistance.
MW stations are a great way to tune the null.
I think Julian mention something abt supplying termination
bits and pieces.
The EWE ant is perfect for your situation.

Hi all,

reception last night not up to the level of the night before but still some interesting stuff. All the usuals in including a very good WEGP on 1390. Also:

1650 WHKT Portsmouth VA, disney programming. G 22:58
1690 WPTX Lexington Park MD, id on hour. G 23:00
1430 CHKT Toronto, Chinese programming. F/G 23:01
1540 WDCD Albany NY, people to people religion show. VG 23:06
1520 WKBW Buffalo NY, usual oldies and cool jingles. VG 23:50
1250 CJYE Oakville ON, "Joy 1250" id and pops. F 00:00
1700 French Programming via??? F/G 02:20
1030 WBZ Boston, full id and talk. F/G 02:50
530 Voz Cristiana, Turks and Caicos, long sung id. G 02:58
560 CHVO Spaniards bay, NF // 590 VOCM programmes W 03:00
890 R. progresso Cuba, yl in talk. F/G 03:45
750 RCR 750 Caracas, Venezuela, "R -C -R-ay" om in talk battling CBGY F/G 03:52

Anyone got any idea of the French programming on 1700??.

1060 again had a religion station at times but not at very good levels no id - then a spanish station later - not strong either. Much later maybe 4 am - 1060 had a sports station at quite good levels mixing with a station playing classical music. - - Any ideas John??.

850 WEEI was fighting it out with a religion station for a good part of the night too - with the religious station taking over at times no id though.

And then at 5 am the vandals - some of whom had been involved in a near riot at a night club opposite my house discovered the wire laying across the road at the back of my house. They followed it to my fence where the ripped out an earth and started messing with my 1.1 metre sat dish. When they spotted me at the window they scarpered but.....its just annoying. Perhaps I'll have to run coax over head into the trees and feed the short bev from there.

The other option is of course to have most males under
the age of 25 hanged :)

regards

Paul Logan,
Lisnaskea, N. Ireland.

Sounds like its worth the hassle Paul.
I thought the evening started it out with a bang until abt 1245 and it frizzelled out a bit.

Had

QX 280 NF NDB
JT 390 NF NDB

1390 2 stations WEGP was very good
1510 was huge sig
1010 good with vy hvy qrm (Canada)
1470 USA

Only carriers and vy weak audio above 1600 (1610 weak audio)
So the Bevs doing its stuff.

Good Luck Ian

Anyone got any idea of the French programming on
1700??.

1060 again had a religion station at times but not at
very good levels no id - then a spanish station later
- not strong either. Much later maybe 4 am - 1060 had
a sports station at quite good levels mixing with a
station playing classical music. - - Any ideas John??.

850 WEEI was fighting it out with a religion station
for a good part of the night too - with the religious
station taking over at times no id though.

And then at 5 am the vandals - some of whom had been
involved in a near riot at a night club opposite my
house discovered the wire laying across the road at
the back of my house. They followed it to my fence
where the ripped out an earth and started messing with
my 1.1 metre sat dish. When they spotted me at the
window they scarpered but.....its just annoying.
Perhaps I'll have to run coax over head into the trees
and feed the short bev from there.

The other option is of course to have most males under
the age of 25 hanged :)

regards

Paul Logan,
Lisnaskea, N. Ireland.

// Sports on 1060 is probably KYW Philadelphia PA.

850 WEEI was fighting it out with a religion station
for a good part of the night too - with the religious
station taking over at times no id though.

// No idea - an interesting one.

And then at 5 am the vandals - some of whom had been
involved in a near riot at a night club opposite my
house discovered the wire laying across the road at
the back of my house. They followed it to my fence
where the ripped out an earth and started messing with
my 1.1 metre sat dish.

// Kill them! ;0)

I found it a frustrating night for IDs. My nostalgia station on 1060 is a complete mystery. No
more airport visits until next Wednesday so hopefully some better loggings.

Conditions are still quiet now. This may not last, but fingers crossed it does!

Hi Mark,

I hope to try some EWE experiments sometime in the near future (as soon as possible, at least). At
the moment I have very little knowledge about these aerials and how they should be set up. Perhaps
Julian, or someone else could explain in a little more detail.

In the meantime I think there is plenty of information to be found on the web - try Googling for EWE
antennas for medium wave. For starters ... http://www.nrcdxas.org/articles/ewe.html

PS Mark - When trying for Boston on 1510, wait until the end of the evening after Belgium have
signed off on 1512. It is unlikely you will get anything before they close for the night.

Also check 1390 and 1470 - again, very late evening when the respective Euros have gone off.

Try the X band too. 1620 can give good signals from the station WDHP in the US Virgin Isles.

Also listen for Radio Disney on 1650 (WHKT Portsmouth VA) and Indian music on 1680 (WTTM Princeton
NJ). 1690 WPTX Lexington Park MD has an all-news format with frequent IDs.

You WILL get them one night. When you do, you'll wonder why you've never heard them before. :0)

Good luck!

John

You know I dont think conditions have been much use
the last couple of nights - strange I know especially
sinced Ive logged over a hundred stations - but - I
remember times when the X band stations would be maybe
S9++ - I remember hearing WDHP Virgin Isles on 1620
and WGIT in Puerto Rico both maybe 20 over on a small
amplified loop. And I dont think it was spring which
usually favors the caribbean / south america.

Its also strange from night to night observing how
either the lower or higher part of MW is doing better
than the other.

heres hoping for a good reception vandal free night!

Better get an electric fence charger and hook it up to wire when you notice them picking up the wire. That should fix it.

About 30 years ago I sold to a cooworker such a device, because his friend lived near a pub and every day someone took a piss at his front door. He put a wire near the bottom, and during the following nights heard some incredible screams. It worked !!

Sounds ok....Doesnt matter abt the coax being at the far end.
Obviously you need a 300-900ohm resistor in there to
give it some front to back
Unless the portable receiver is a very good one you will
not have much success.
Does the receiver have USB/LSB or a BFO
as ideally u need to zero beat the freq using this mode.

If its AM only try 1510 after 2300 you might get that.

Regards Ian

I'm not clear what Mark is using for the matching/isolating transformer, but it should be wound on a ferrite ring, and look something like: http://www.dxing.info/images/articles_impedance_matching_small1.jpg

Maplin ferrite toroid type QT26 will do in the short term*
Any type of potentiometer will suffice for MF, and you should look for a 'linear' type of around 2 to 5kohm, e.g. Maplin types JM70 or FW01
You'll have to run some co-ax down the garden to the transformer at the NW end, then adjust the 'pot' for the best null on some station coming in directly from the SE end (maybe Le Mans, Marseille or Toulouse?)

I'm not clear either about what Rx you are using. For use with the ferrite rod in a portable, a tuned loop (which need not be larger than 1m dia) will just amaze you! Get the Maplin FT78 tuning capacitor, or cannibalise an old transistor radio, and wind 12 turns of wire on some board to give a diameter of 2ft. I can currently hear quite clearly, on the kitchen portable, next to the 2' loop, at Ian's suggestion, 1510 WWZN

Good Dx - Julian

*The QT26 toroid is quite unsuitable for use as a common-mode noise choke, before anyone asks.

I get this for your link Julian.
The rx is a philips d2935 with seperate screw ants for am earth and fm
picture is here http://www.thorneyhill.freeserve.co.uk/philips.html
has switch on front for switching between external ant and am ferrite
rofd in set
the step down is temporary an old guard or mesh about 2ft by 1ft with
about half inch mesh square and connect in the middle at one end is 30
or so turns of wire which is connected to the ewe and earthed then on
this same guard is 9 turns of another wire right next to the 30 turns
and this one goes to coax and the recievers ant in this was working
last night and was comparable with the sets internal ferrite rod with
signal levels maybe a bit more with a slight overload in places but
only slight ..
The ewe is connected at the other end to a two foot aluminium rod
which is right in the ground to soil depth but this was working last
night as i was good good or reasable signals of it

Condx were excellent last night and the polar paths seem very good.
I would have loved to be sat on the seafront with a beverage acroos the beach.(planned for the future.)
I didnt get chance to check the MW but had lots of fun on Longwave.Topband sounded like 20M full of east and mideast USA stations.

I have incleded my NDB log for interest.
New Countries were Libya Puerto Rico Canaries and Czec Republic.
I missed Croatia that my pal could hear on his 20m Quad.
I need to work on a directiional antenna.

NDB Log from last night
Brief log from last night listing some of the better catches. listening between 1000 -0230
JT and QX were also good signals. Sorry abt the format.

104. R: [skywavesmw] European Members

Yahoo group: skywavesmw
Date: 2005-10-23 14:35:12 UTC
From: Renato Bruni
Topic: 99 Message: 104

Dear John,
earlier in the season we had a couple of nice openings towards Colombia and Venezuela, with Carinosa Manizales-1450 and La Pascua-1370 as major hits.

Last Friday was particularly good for North American stations reception at Northern latitudes in Italy. Nothing new or exceptional during that night, but as a few days ago it was possible to tune to a full MW band of signals, some at armchair reception level.

It must be pointed out, however, that conditions are always less exciting here in Southern Europe if compared with the UK and even northern Germany, mainly as a consequence of the lower number of free channels actually available for dxing. It's really a pity, dxing-wise, because when channels are really free some excellent catches have been made also here -during the last 5 years at least- by myself, by Giampaolo Galassi, Valter Comuzzi, Andrea Lawendel and Rocco Cotroneo (Ecos del Naranjito-1470 and Teleradio-1350 from Ecuador, Emisora Espacial-1390 from Peru, XECO-1380, XETT-1430, XEBAL-1470 from Mexico, WADO-1280 and CJWI-1610 from the US/Canada, Ondas de la Monta?a-1350 from Colombia, R. Sociedade Espigao-1570 from Brasil and so on). Not to say that during this summer Valter Comuzzi catched both 1370 Radio Santa Monica, Cuzco, Peru and 1380 Radio Nuevo Tiempo, Lima, Peru.

When 1350 kHz was free, JOIF-1350 from Japan, Jiangxi PBS from China and an unid station from the Philippines (maybe DZXQ Pasig City Metro Manila) were heard and on 846 kHz AIR Ahmedabad and Kuang Hwa BC-TWN have been positively logged and their ids recorded.

As you can see we have maybe a small edge towards LA, especially during late spring and summer and maybe a slight edge towards Far East if we can take advantage of K9AY antennas or phasing/nulling devices.

I usually upload daily our best catches (both as log and as mp3/real audio) in http://www.radioascolto.org/html/index.php. Another excellent reference on what can be (or has been at least once...) heard from Italy in MW during the latest years is Salvo Micciche's DxHandbook, which can be downloaded for free following the instructions available at: http://snipurl.com/ivw1

Good dx,
Renato Bruni

109. Re: [skywavesmw] European Members

Yahoo group: skywavesmw
Date: 2005-10-23 16:42:10 UTC
From: Jurgen Bartels
Topic: 99 Message: 109

Last night I checked until about 02:00 UTC, but signals weren't impressive.

1510 and 1390 made it occasionly to audible levels
1520 was strong (with 2khz filter) but on 1521 a strong arabic station blocked it, hopefully will be silent once Ramadan ends.

also heterodynes on 1170, 1230, 1290, 1500, 1540

I have had much better signals a couple of years ago, (I stopped listening the last 3 winters). I remember that often on 1510 Boston (WRNB) and WLAC Nashville arrived simultanously.
I guess the northern latitudes are better off now.

Also the band at night is quite filled up by europeans.

I checked my logs and found that in Dec 97 I had excellent signals from USA/CAN from Northern Germany. Up to Des Moines (WHO), never had it so far.
In the late 70's I once got WOAI San Antonio.

The reception in the 70's in Northern Germany was in retrospect incredibly good. With a normal radio at a 1x1m loop I got very often WINS and it sounded as loud as Holland (on 1008) during the day. No special filter just a plain receiver. But then Spain wasn't using MW during the night and many others in Europe closed too. That left plenty of empty spots.
Later I bought a R390 and was hoping for better results, little did I know, that over time things only would deteriorate despite a better rx.

TA-DX in Northern Germany is definitely better then here in central Germany, although it is 'only' 360km more to the north.

I am using now: R390 at a 1x1m loop,
loaction: near Wiesbaden Germany

Jurgen

1060 WLNO New Orleans LA. OM excitable gospel giving tips on avoiding temptation! Programme promo "Saturday night, right here on WLNO" and full ID on half hour ". AM, WLNO New Orleans . ?home
of the Chritsian radio station?" Fair 23:30 22/10 JF

1060 WBIX Natick MA. "Your Business Station, AM 10-60 WBIX" ID on hour Fair 00:59 22/10 JF

1139.96 CHRB High River AB. Presumed, YL serious speech (religion?) on recognised offset. Mixing
CBI and UNID (country?) music station Weak 07:15 23/10 JF

1280 WFAU Gardiner ME. Sports information, ID. In nice and early Fair 22:00 22/10 JF

1690 WWAA Avondale Estates GA. "WWAA Avondale Estates ... the Al Franken Show" Also "16-90 Air
Atlanta" IDs. Fair 00:59 23/10 JF

1690 WWRL Berwyn IL. "Real Oldies" Drifters, Elvis, etc. Fair 01:15 23/10 JF

Not bad considering I fell asleep shortly after 01:00 and slept right through. The radio was tuned
to 1690 at this time. How I so wished I'd stayed awake. (I also heard Chinese music on 1470 just
after the sunrise period - likely CJVB Vancouver BC)

So pleased to get the ID's on WLNO. Recording at:
http://www.skywaves.info/2005/1060wlno-2330gmt-22-10-05.mp3 WBIX was a bonus.too as I haven't heard
this since it was called WTTP - "back in the day", as they say. This signal just romped in and
stayed there.

My logging of CHRB on 1140 came about when I heard an off-frequency carrier close to 1140 from
around 07:15. I loaded SpectrumLab on my laptop and could clearly see the CHRB offset at 1139.96.
Audio could be heard in the form of a woman talking in a serious voice though it was difficult to
make out inividual words. I hate to log another "presumed" catch but the offset was correct and I
really don't see who else this could be. What was also interesting was that there were at least
FORTY carriers present on this channel!

Good DX!

112. Excellent MW conditions this morning, very useful spreadsheet listings

Yahoo group: skywavesmw
Date: 2005-10-24 09:25:41 UTC
From: Björn
Topic: 112 Message: 112

Hi everyone,

what a great idea John had to create a new MW-DX group !

I'm age 30 now and started DXing 20 years ago.

My listening location is situated in the far western region of Germany, close to the Netherlands and Belgium. So far the past week has provided very good conditions on MW with nightly DX signals from across the Atlantic (1510 or 1390), despite being surrounded by so many European powerhouse stations in all directions (the French stations don't switch off anymore, what a shame !).

The equipment here for now is quite simple: A small MW loop antenna used either by passive conducting or direct connector, and a Degen DE 1103, Sangean ATS 803A, Grundig Yachtboy 400.

The Sangean ATS 803A has a nice narrow 2.1 kHz AM filter, the other portable sets will have get modified with narrower filters. The Grundig Yachtboy f.e uses 3 and 4 kHz AM filters.

Some DX loggings from here will come later on, but for now here is an important link for all DXers looking for accurate radio transmitter data from North America. Girard Westerberg, a DXer from Lexington in Kentucky offers some accurate and very convenient spreadsheet listings on his DX website, for both AM and FM stations:

http://www.dxfm.com/Content/spreadsheet_info.htm

http://www.dxfm.com/

good DX

regards

Björn

113. Ashfield DX Log: 24-10-05

Yahoo group: skywavesmw

580 CFRA Ottawa ON. Home improvements ad, and two "CFRA" ID's" Fair 06:34 24/10 JF
640 CBN St Johns NL. CBC programming // CBNA 600 and others Good 06:23 24/10 JF
650 KNR Qeqertarsuaq. OM talk in Greenlandic V good 22:11 23/10 JF
730 CHWO Toronto ON. "Great music becomes unforgettable. Here's another all-time classic from
Toronto's AM 7-30". Over CHCM. Good 06:31 24/10 JF
1630 KCJJ Iowa City IA. Very weak but positive ID in the noise - "Iowa's ??? ??? KCJJ Iowa City"
Pop hits: Elton John "I'm Still Standing"; Debbie Gibson "Only In My Dreams"; Weak 02:00 24/12
JF
1630 KKGM Fort Worth TX. Hot gospelling OM, dominant over KCJJ & WRDW. Weak 03:28 24/10 JF

Dozing off while tuned to 1630 wasn't such a bad thing after all as I logged KKGM & KCJJ - first
timers here. I was hoping for KRND but this didn't materialise - that would've been ALL the North
Americans on the channel - and it's not everyday you can make that sort of a claim!

I had a tune around "live" from 06:30 and bagged the rest. Off to work before 07:00 I left the
recording going on 1130 and heard TALK / DISCUSSION behind / almost equal levels with WBBR. The
subject matter wasn't clear but it wasn't a sports commentary as such. This was mostly not there at
all and had gone by 08:00. WBBR carried on until 09:00.

The Calgary carrier was present again on 1139.96 before 07:00 so I suspect there will be some good
loggings elsewhere.

Good DX!

118. Conditions Overnight

Yahoo group: skywavesmw
Date: 2005-10-25 19:38:20 UTC
From: John Faulkner
Topic: 27 Message: 118

Not so good overnight. Struggled to find anything worth recording so I settled for 1660, where there are a few stations I don't yet have in my log.

At 05:30 I heard sports talk and an ID of "This is ESPN radio dot com" and a mention of the White Socks. Unfortunately I find three stations on 1660 which carry ESPN: WQSN, WFNA or KRZI. I don't know which is the most likely candidate.

K indices up to 4 so far today. :0(It was good while it lasted!

Quiet to unsettled conditions are forecast from tomorrow for a few days.

Good DX!

John

That sounds very promising Mark. Glad to hear it's working well.

Conditions have begun to improve already after yesterday's poor overnight period. Miami and Cuba
particularly good this morning. My log to follow later..

I'm off to see Julian this evening to get some ferrites and a few bits for the EWE, though when I'll
get chance to play around with this is anybody's guess. Workload high here - mustn't complain, it
pays the bills! :0)

Cheers

I'm trying to catch up on sleep here too, Ken! I try to listen around local midnight and sunrise.
For the bit in the middle, I just record a chosen frequency - usually wherever happens to be
producing anything of interest. Occasionally it's just "wherever" I can access easily just to see
what turns up. (1060 tonight)

Conditions this morning were focussed around Cuba and Florida. 610 WIOD is a personal first. Seems
just about everybody else got it too! It was dominating the channel, only allowing CHNC to come up
occasionally.

Did anybody else notice how many odd-offset carriers there were this morning around sunrise?

Two clear carriers on 1140 again around 06:00 GMT but this time not the Calgary station.

1060 was interesting with two North Americans and a Latin up to 02:45 - when somebody signed on and
splattered the channel to bits. Bang! and the DX is gone!

I am surprised conditions have recovered so quickly considering yesterdays numerous K4's.

Good DX!

Signal pick-up on the feeder is liable to compromise the null, so it would be best to try to minimise the pick-up. I'm not even sure if you've got the EWE wire connected up correctly, so check everything.

Start with the receiver. With no aerial connected, there should be nothing except your strongest local stations, like Start Point 693kHz. If necessary, try shorting the Antenna terminal to the Ground terminal with a very short piece of wire (max. 3in). When that is ok, connect the co-ax feeder to the Rx, inner to 'ant' and outer to 'ground', with the far end of the co-ax shorted. There should not be much more signal level. Then connect the transformer smaller winding (6 or 9 turns) and there may be a little more signal, but only from the strong locals. Try grounding the co-ax ground (outer) to the grounding rod which you should have driven into the ground adjacent to the NW end of the antenna wire, to see if this reduces the signal levels at all. Try running the Rx on batteries, and try grounding the receiver locally, until all seems well.

Now connect one end of the larger transforrmer winding to the adjacent ground rod, and the other end of this winding to the EWE wire. Regardless of whether or not the other end of the EWE is connected to the second ground rod, you should now be getting needle-bending S9+ signals from anything 'nearby', eg Ireland, France, and the Benelux. If not, find out why!

All being well, you should now be able to set the termination resistor for a good null on signals from your southeast, eg Rennes 711kHz.

Good Dx!

Let's call it DX 2.0. We all know how the Net can be helpful nowadays. The latest Brazilian DX catch in Italy, Radio Sul Fluminense 1390, has been made possible by good propagation conditions and some... real time collaborative detective work made by Renato Bruni in Parma, and Rocco Cotroneo, living in Rio de Jainero, both connected, via audio and keyboard chat, through Voip application Skype (is it only a chance it's a Swedish/Baltic software?).

While Renato was able to hear the station in Southern Europe, with a live coverage of a Santos-Vasco futebol match, Rocco, a hundred miles from the station location, could barely hear a few fragments on his radio set. No other station Rocco was being able to tune to in Rio was commenting the same match, so much so that Renato rather suspected some local station in the North-East, quite far from Rio. But, a Northeastern carrying a Vasco game...? Luckily, everything came through Skype thanks to a direct minidisc-computer audio connection and, eventually, as a full length MP3 recording.
Please go to http://www.radioascolto.org/html/index.php to listen to the clear ID at 00.33 UTC of today, October 27h.. Just follow the first orange link in the first posting.
BTW, Santos ended up defeating Vasco 3 to 1.

73s
Andy

133. Big Moor Overnighter

Yahoo group: skywavesmw
Date: 2005-10-27 11:42:23 UTC
From: John Faulkner
Topic: 133 Message: 133

DXpedition to Big Moor, Derbyshire.
http://www.multimap.com/map/photo.cgi?client=public&X=427000&Y=374000&scale=25000&width=500&height=300&gride=&gridn=&lang=&db=freegaz&coordsys=gb

A disaster waiting to happen! To call it a disaster is perhaps unfair, though the ending was
somewhat unexpected. People know my (bad) luck with aerials, but this particular experience just
left me feeling bewildered. First, the DX ...

I didn't actually log anything at all as I was hoping to hear something more exotic than the regular
east coasters. By midnight GMT the band was full of strong North American signals. 1090 WBAL and
1070 CBA were almost free from splatter - the Europeans just weren't presenting any challenge to the
DX.

Of the few catches of interest I report ...
1670 kHz at 23:50. WMWR was heard with a clear ID but there was another station mixing with equal
levels, playing Indian style music. I don't see any North American station listed on 1670 which has
ethnic programming. Anybody any clues?

1140 had the familiar carrier offset from CHRB around 05:00, but only briefly.

1360 had three stations around 00:00. At 00:18 two of the stations were carrying separate adverts,
then they both must have gone back into a syndicated programme and there was a clear echo - this was
a standard talk show. I may have heard WKAT and WIXZ? I was unable to make recordings with my
laptop as the drain on my mains inverter / car supply was too much and it kept sounding it's alarm.

This session was the worst I've ever known for getting IDs. EVERY signal I monitored at the top of
the hour faded at the wrong moment.

North American signals around midnight GMT were generally strong - s9+10dB+!!! But the DX seemed to
start fading away not long after this. By local sunrise, DX signals were much more subdued and
there was a sudden Latin takeover after 06:00. I pulled the plug and started to get the wire in
shortly after this. This is where it went completely pear shaped.

The wire was a 300m beverage, beaming approximately 300 degrees, suspended about a meter above
ground level, draped over the dry stone wall and various bushes / tree branches then terminated via
a variable resistor, set at 500 ohms. It wsa almost full daylight and I walked the length of the
wire, un-hooking it from the wall as I went. I almost got to the end of the wire when I caught
sight of flashing yellow lights back towards the beginning of the wire. I guessed it was a tractor
and so I got back in the car, pulled into a lay-by and waited for it to pass. It pulled in just
after where the beverage started. I waited for ten or fifteen minutes and it started up again, came
up the road and overtook me, driving off into the distance.

I got out of the car to start reeling the wire in, but it wasn't there anymore. (scratches head -
it was there ten minutes ago) I drove back down towards the beginning of the wire, still not able
to see it. It had vanished! I also noticed that some of the grass ans bushes had been cut here.
It didn't take me long to realise that the tractor had been cutting back the growth (at 7:30am) and
had picked up my wire, hence the likely reason the tractor had stopped. When it drove past me I
could see the grass / hedge trimmer tool but it wasn't in use. I guess my wire had wrapped itself
around the cutter and siezed it up. Also, my earth rods were gone too, presumably these too were
wrapped around the cutter.

Never mind eh! It's just another disaster to add to the ever-growing list of disasters which plague
my MW DXing.

Here is a brief assessment of the stations I heard, though you will appreciate I have to *assume*
them all due to the lack of IDs, hence these are not *proper* loggings.

Hi Mark,

For Dutch pirate loggings I find this group realy usefull.
Its not really a group as such, but more a distribution list sent out once a week of the last 7 days Medium Wave & Shortwave pirate loggings.

Its worth a look
http://groups.yahoo.com/group/doctortimde/

Happy DXing

Nigel

135. Taiwan - The Voice of Kuanghua now coming in on MW 846 kHz

Yahoo group: skywavesmw
Date: 2005-10-28 22:14:19 UTC
From: Björn
Topic: 135 Message: 135

Right now, when I null the signal from Ireland on 846 kHz by pointing the MW loop antenna to the NNE, a weak signal from Taiwan - The Voice of Kuanghua
is coming in, just by using the Degen DE 1103 via inductive coupling, I could also directly connect the loop but this works better. The signal from Taiwan sometimes fades in to a well readable level, with talk by a chinese woman.

For DXers in England 846 kHz the Irish station on 846 kHz might be harder to null, not sure how it is in Lisnaskea at Paul's location. A Dxer in Sweden, Joachim Stiller also was able to receive other nice Dx signals from Asia:

1557 1495 UTC Family Radio Taiwan
819 1615 UTC Shaanxi RGD
1425 UTC Delhi A O=4
1467 1450 UTC IRIB Isfahan und BSKSA
1377 1455 UTC chinesisch und russisch (tent Yekaterinburg)
1368 1510 UTC IRIB Sari und chinesisch

136. Ashfield DX Logging: 29-10-05

Yahoo group: skywavesmw
Date: 2005-10-29 11:01:36 UTC
From: John Faulkner
Topic: 136 Message: 136

1060 WBIX Natick MA. God, God and more God at 23:30, but not the hot gospel style of WLNO. ID at
top of the hour and USA Radio Network News Fair 00:00 29/10 JF

Sleep required following my previous night's lack of. So I just recorded two frequencies overnight.

1060 kHz:
WBIX dominant from 23:00. Sports popped up after 02:00. Between 02 & 02:45 there was another
station playing non-stop jazz music. This was persistent but there was never any speech. At 02:36
a Spanish YL talker appeared. Sounds like the same one I have heard on precious nights. Euro
carrier on at 02:48 - end of 1060, only seconds after an ID of " __?__ Classic Radio". I was hoping
to catch the Mexican station on here.

1520 kHz:
Moving here at 04:30 in search of KOMA perhaps - only foind WKBW and a very lively Latin music
station. Looks like the start of the late morning Latin takeover we are coming to expect now.

Good DX!

137. Might be an Idea: A DX-pedition to the far western point of Ireland

Yahoo group: skywavesmw
Date: 2005-10-29 12:52:31 UTC
From: Björn
Topic: 137 Message: 137

Hi everyone,

this might be an idea, several DXers could gather together at Shannon and head to the far western reaches of the Irish coastline to do a DX-pedition ?

A good location at Dingle head or in the NW of county sligo may offer some never before heard MW signals ?

good DX

regards

Björn

What an excellent idea Bjorn!

Sadly, for me, I have to be "available" for work and may only be able to go at the "last minute" so
will be unable to make any plans.

Anybody else?

John

From: Björn
Topic: 139 Message: 139

Hi,

There is new very informative website for all MW-DXers hosted by the Danish DXer Ydun M. Ritz:

http://www.mediumwave.info/

there is a good MW log-database section there too:

http://mediumwave.info/loggings/loggings.php

with many logs from the famous DX-183 (Wilhelm Herbst) beverage antenna park in northern Denmark.

regards

Björn

The forecast is for quiet conditions up to the 3rd of November.

The far east could be good now.

Anybody getting anything?

I've been thinking about this,

Im only 30 miles inland from the Atlantic in a county
which is virtually a puddle! have a look at a map of
Fermanagh.

Theres this site a few miles from me it has chalets on
the side of a lake I dont know if it would have the
space for very large antennas but Im going to have a
look one of these days.

will keep you all posted.

Paul Logan,
Lisnaskea, N. Ireland.

144. BOCCA DI MAGRA DX NIGHTS 23-28 October 2005

Yahoo group: skywavesmw
Date: 2005-10-29 22:11:04 UTC
From: Dario Monferini
Topic: 144 Message: 144

Ciao!
This is the report from Bocca di Magra Dx Nights
(Bocca di Magra is a little town in the gulf in front the Toscana coast of Massa & Carrara towns) the place is very quiet in autumn, and south direction is open to the Mediterranean sea, signals from Spain (Valencia & Catalunya & Baleares) are heard also at daylight with no problems also with portable DEGEN 1103 or SANGEAN ATS 909.
Hope you may open this link and you get the map area:
http://www.comune.ameglia.sp.it/contenuto_secondo_liv.asp?id=14&sez=10
or http://www.comune.ameglia.sp.it
click on TERRITORIO and than click MAPPA DEL TERRITORIO
The listenings has been done by Dario Monferini and Giampiero Bernardini.
Receivers & Antennas : Rx: Drake SPR-4; RFSpace SDR-14;Icom R7000 (mod. by Capra); Lowe HF150; Grundig Satellit 700 & 500;Sangean ATS 909 mod. & DT-220; Degen DE1103; (In all FM rx I use 110/80/53 kHz filters); RKB 5, 9 & 10 elements FM; Wellbrook LFL 1010, loops by A.Capra; DLA Loop for MW.

Weather has been stormy the night of the arrival 23 Oct. with floods in the listening area...but we survived..hi
Also following night 24-25 Oct. same weather, but from 25 Oct. morning sunny sky till the departure day 28 Oct.
However lot of QRN storms on the MW the nights 26-27 Oct. made quite hard to do MW listenings.

Propagation resulted good to North America MW on 23-24 Oct. and good to very good to La Plata area and Brasil MW on 25-27 Oct. less good on 28 Oct.

Here the complete DX-LOG :

145. Some logs from last night 29.10/30.10, Taiwan was strong on 846 kHz !

Yahoo group: skywavesmw
Date: 2005-10-30 10:39:47 UTC
From: Björn
Topic: 145 Message: 145

Hi everyone,

some logs from the Middle East and Asia last night, received with an Degen DE 1103 and a MW loop antenna:

531 IRN IRIB 1 - Hamadan - Talk in Farsi //1503 Bushehr (really strong !) 0=4 (Even stronger than Algeria)

639 IRN IRIB/Vo Iran - Bonab - Muezzin call 0=2-3

846 TWN Voice of Kuangua 1st Network - Kuan-yin, Guanyin - Talk in Chinese 0=3
(Very nice signal, no MW loop was needed, just the plain Degen DE 1103 or Grundig Yachtboy 400 did it well !)

954 QAT QBS Arabic - Al Arish 0=2-3 (Only when CZE is off air)

1017 TUR TRT 1 - Mudanya - Turkish music 0=3-4 (over SWR Contra)

1026 IRN IRIB 1 - Tabriz - Talk in Farsi 0=3-4

1161 IRN Vo Iran - Abadan 0=3

1224 ISR Galei Zahal - Beersheba //1287 kHz 0=2

1287 ISR Galei Zahal - Tel Aviv 0=3-4

1386 KEN KBC - Maralal, New in English at 02:00 UTC 0=2

1467 IRN IRIB 1, Isfahan, Muezzin call 0=2-3

1503 IRN IRIB 1, Bushehr, Talk in Farsi //531 kHz 0=3

Another log on 1539 kHz from a few nights ago revealed a huge signal somewhere from the mideast, the program was in Farsi, very strong here 0=4-5

And ofcourse from across the Atlantic a few North American stations were logged too, but not as much as in the UK or IRL:

950 CAN CHER - Sydney, Nova Scotia - Soft pop music 0=3

1030 USA WBZ - Boston, Massachusetts 0=2-3

1050 USA WEPN - New York City, New York 0=2

1390 USA WEGP - Presque Isle, Maine 0=2

1500 USA USA WTOP - Washington DC 0=2

1510 USA WWZN - Boston, Massachusetts - Sportstalk 0=3

good DX!

regards

Björn from Germany

146. 1510 WWZN Boston Mass.

Topic: 146 Message: 146

Since autumn 2004 again (a little) active on LW/MW.
Compared to autumn 2004 condx. are not so good in my
opinion (?).
Only USA WWZN 1510kHz Boston Mass.is coming in last
three nights with amazing strenght.

On LW last year same time every night Turkey, Iceland(2x)
Marocco, Algeria and many Russian TX's.

Of course I use a Supertech SR16HN(Sangean)of 1988 with the
built in ferrite rod, but I used this RX also a year ago !

149. Good Dx receiver: Supertech SR16HN=Sangean ATS 803A

Yahoo group: skywavesmw
Date: 2005-10-30 14:23:32 UTC
From: Björn
Topic: 149 Message: 149

Hi,

the Supertech SR16HN or alias Sangean ATS 830A was a really good portable receiver in the early 1990s, it was perhaps the best ever Sangean portable ever built. The 2.1 kHz AM filter in narrow mode performs nicely, much better than on most portable sets. The price of a Sangean ATS 803A or Supertech SR16HN in 1992 was very affordable, only around 300 DM or 150 ☐.

Anyone who uses a Sangean ATS 803A or Supertech SR16HN, can find several helpful tips here (most important is the mod that gets rid of the chuffing noise while tuning):

http://www.sdxf.org/alfa/dxinfo/sangean_ats803a.pdf

From: Björn
Topic: 150 Message: 150

Hi everyone,

Bjarne Mjelde, one of the organizers of the big Kongsfjord DXpedition in the far northern reaches of Norway has a very informative personal DX page with some of his latest blogs included:

http://mjelde.blogspot.com/

And not to be missed, the main Kongsfjord MW-DX page:

http://www.kongsfjord.no/

http://www.kongsfjord.no/logs/KONG13.htm

http://www.kongsfjord.no/logs/KONG12.htm

One of the few locations in Europe where a Dxer can receive signals from Tonga, Hawaii or many other Pacific targets on MW !

Regards

Björn

151. Ashfield DX Log: 28>30-10-05

Yahoo group: skywavesmw
Date: 2005-10-31 02:27:38 UTC
From: John Faulkner
Topic: 151 Message: 151

My first message (from several hours ago still hasn't arrived so here is a repost - apologies if it
appears twice (or more!)

1280 CFMB Montreal PQ. Presume with ethnic programming. Sounded Slavic or Italian but too much
splatter to be sure. Definitely not WFAU which overtook later. Jingle ID sounded like "Radio
Nationale" with possible CFMB letters after??? Click
http://www.skywaves.info/2005/1280-2147gmt-28-10-05.mp3 to hear. Fair 21:25 28/10 JF

1650 KWHN Fort Smith AR. ID on the half hour. "News-talk 16-50 KWHN" Weak 02:30 30/10 JF

Overnight 28th > 29th was spent looking for CFMB 1280 and WFIF 1500 around 21:00+. Not sure if I
had CFMB but you can hear the recording of a jingle ID by clicking the above link in the log.
Perhaps someone will recognise this jingle. 1500 had two stations but they were too weak and the
splatter was impossible to shift. Overnight on the 29th I recorded 1160kHz as there was an English
talker (monotonous discussion) which occasionally pushed through the mess from 1161.

Overnight on the 30th got off to a late start after a day-trip to Wales (not for DXing once again)
and I monitored 1650 kHz. WHKT and KWHN were fighting it out at the beginning of the morning though
signals deteriorated as the morning progressed. KWHN won in the end with a further ID at 06:34.

I'm unimpresed with the general conditions over the last few nights. TA signals mostly subdued and
lots of Euro-splatter and mush.

Good DX!

153. Re: Degen 1103 [was Re: Some logs from last night...]

Yahoo group: skywavesmw
Date: 2005-10-31 23:44:16 UTC
From: Julian Hardstone
Topic: 153 Message: 153

Jordi - The Degen 1103 cannot use an external antenna below 1710kHz. Use of a tuned loop as described by Bj?rn is probably the best way to get such excellent Dx. No direct connection to the loop is required when the receiver has its own ferrite antenna. I keep listening on 846 (with a tuned loop) but Ireland has been very strong in the evening.
- Julian, Manchester

154. Wipeout!

Yahoo group: skywavesmw
Date: 2005-11-01 00:51:53 UTC
From: John Faulkner
Topic: 154 Message: 154

I couldn't find any channel interesting enough to record overnight so I just set the rx on 1620 for
the hell of it.

Tentative WDHP, very weak playing music over the top of each hour and half hour with no IDs.
Nothing else.

Conditions were forecast as being "quiet" so I don't know what went wrong.

Problem is we've now been spoilt by the conditions last month.

Good DX!

John

Topic: 156 Message: 156

Hi everyone,

When using a trick with the software, the Degen DE 1103 can tune below 100 kHz, there is an even bigger suprise in store: As soon as the Degen DE 1103 tunes below 100 kHz the built in ferrite bar antenna switches off and on comes the whip antenna and the external antenna connector also can be used below 1710 kHz !

It will take a few necessary steps to apply this:

- tip in 2-1-9-5-1 kHz, press the AM (band +) button

- now press the FM (band -) and AM (band +) button at once, a downward scan in 5 kHz steps will start, it will take a while to reach below 100 kHz (4-5 min or so)!

- when the scan finally reaches a frequeny below 100 kHz, quickly stop it by moving the tuning dial and manually tune or stop at a desired frequeny, such as 77 kHz (DCF 77 time signal).

- now save a memory preset of any frequency between 0-100 kHz, at least twice.

- after calling a memory preset, such as 77 kHz, simply turn the scan mode off again by pressing the FM (band -) or AM (band +) button, and then continue tuning by using only the tuning dial.

- now tune up towards the LW and MW band, you will notice right away by touching the whip antenna, that it is indeed now active. Many signals on LW and MW now come in stronger.

- Even the external antenna connector will now work below 1700 kHz, but inductive coupling with a MW loop still will often bring in more signal level.

- If who want to switch back into "normal mode" or do inductive coupling with a MW loop instead, just tip in any frequency on MW or press the FM (band -) and AM (band +) button. This will immediately turn the ferrite bar antenna back on again !

- If the dislay panel has been correctly shielded from the HF circuit board, everything will work fine. If the shielding from dislay panel interference is not so good (one or more solder pins are perhaps not OK), the a loud buzzing noise might come up when the ferrite bar antenna is turned off (let's not hope so).

Good luck in trying this out !

regards

Björn

Hallo Björn,

Sehr vielen Dank für deine Ergänzungen über meine SR16HN.
Ich habe es immer eine sehr empfindliche Empfänger gefunden,
speziell betroffen auf was er gekostet hat in 1989.
Generell durchaus alle Bände, inklusiv 76-108MHz, sehr gute
Leistungen .

Viel DX-Vergnügen dir gewünscht von : "technik-antennen@...".

Hi Bjorn,

I have the log details here and can confirm this is correct. Martin Hall heard this station (plus
about 5,000 Alaskans) on his beverage in the north-west of Scotland. It's a different ball-game up
there with far more exotic DX than we plebs could ever hear in more southerly parts of the UK.

KUMU Honolulu was logged on 1500 kHz with positive station identification at 11:30 GMT on 24th
October.

I wasn't aware of this DX group either, having been told that there were no other such forums for
medium wave DX. I suspected there probably were.

Cheers

John

Thanks Björn!!!! now I can use the MW loop in my DEGEN 1103, in high signals is present a distorsion then I put the signal input in local. The noise is present using batteries, I will test the receiver out of the city and then I hope to obtain good DXs, if you have more tricks publish them here, 73+DX!!!

What a fabulous trick, Bj?rn! Suddenly this tiny Rx becomes an excellent desk-top communications Rx, for use with a tuned external antenna. Without external tuning, the image-frequencies are a problem for Dx-ing. But with only the whip ant, you can nevertheless hear any 'local' beacons and LF stations. (DFC77 is clear here)
Many thanks - Julian

163. Overnight 1390

Yahoo group: skywavesmw
Date: 2005-11-03 02:03:32 UTC
From: John Faulkner
Topic: 163 Message: 163

Started listening after 01:00 and 1520 had a fair signal from a lively Latin station. No trace of
WKBW. No ID from the Latin either.

Decided to settle on 1390 which had some activity, but the only thing of interest on here popped up
at 06:03. It was a jingle of sorts, possibly an ID "La musica ... " etc. It didn't sound like Fe y
Alegria or Lumen. http://www.skywaves.info/2005/05;11;03-0603-1390.mp3 Any ears would be appreciated.

I thought this was going to be a better night but the disturbance during the late evening stopped
that. We now have minor storm conditions so maybe South America will make a return over the next
few nights.

Good DX!

Hi

my very first message here, greeting to all of you hectometric
freaks

There was an intriguing non-stop Latino station on 1470 khz this
morning at 0600z and onwards and it was probably NOT VIBRACION as the
signal was much louder and clearer when my
Wellbrook ALA1530 was beamed to the East Coast of America.
Unless of course I had a QRM that came from the SW.
I repeatedly turned the loop to the West Indies but it never failed to
spoil the signal.That's why I'm thinking of an Ethnic US or CAN.
Any clues gentlemen ?
(there was very little announcement and it was in Spanish, music went
from Brazilian Samba to Salsa, Zouk and everything in between.)

Thank you in advance

Pat

That's an interesting one Pat. Doesn't sound like Vibracion either because they ID repetitively between each song. I'm not aware of an ethnic station from the US having been heard in the UK on here. Whereabouts are you?

Vibracion have a programme called "Union Radio Noticias" later in our morning (not sure if 04:00+ or 05:00+) but there carry fairly frequent "Union Radio" IDs. This is a networked programme and you will occasionally hear ID's from other stations on the network - very confusing.

I was wondering about Radio Formula from Mexico? Their programming seems quite varied with speech or Latin styles of music.

The only other "regular" on there would be CPN R from Peru but they are an all news format.

Might be worth monitoring this channel again. You can get interesting stations popping up on this frequency.

Cheers

I have driven through / close to Beauvais a number of times over the last three years (down the A16?) and I can remember the lovely countryside around there. When we've been on holiday to Spain or France I have to drive there. My wife refuses to travel by plane so we take the ferry to Calais! So I get to see many places, which I realy enjoy. I admit I don't like flying much either. I also drove to Italy the other year - am I mad?

Your image of burnt out cars reminds me of places around here Pat. LOL. There are many beautiful places in England, sadly I do not live in one of them. This is the murky Midlands.

Welcome to the group anyway! Looking forward to seeing more of your loggings.

(I am still yet to go through my overnight recording on 1390 kHz. Maybe a Latin or two there if I'm lucky)

Cheers

yep, we even plan to move closer to Beauvais, though paradoxically in a more rural surrounding and a bigger house (180 square metres of habitable space + 1,800 metre park) that will be around end of Feb 2006 if we manage to sell our house.

our current house (110 m2) was bought by us in 98 at 77000 euros; it's now worth 190000; market gone crazy.

our new one will cost 226000 but we ll have 10 rooms

what equipment do you use for your audio recording ?
does it store 8 hours of mambo/biguine and does it display the time of reception ?

cheers de Pat

bigger house (180 square metres of habitable space + 1,800 metre park) that will be around end of
Feb 2006 if we manage to sell our house.

// You'll no doubt be considering the possibilities of a beverage farm? ;0)

our current house (110 m2) was bought by us in 98 at 77000 euros; it's now worth 190000; market gone
crazy.

// it is the same here.

our new one will cost 226000 but we ll have 10 rooms

// So, a bedroom or two, kitchen, bathroom, living room/lounge and half a dozen radio shacks.
Excellent! :0)

what equipment do you use for your audio recording ?
does it store 8 hours of mambo/biguine and does it display the time of reception ?

I currently have a dilemma with recording. I am currently using a trial version of RecAll-PRO
http://www.sagebrush.com/recpro.htm which records for as long as you want it to in mp3 format
(though the file extension is actuall wav. (don't ask! I am baffled by this) I have used it
almost nightly for the last three weeks. An eight hour recording usually takes up between 250 -
275MB of space. Then I transfer the recording from my laptop to my main PC - this is too noisy to
leave recording all night hence using the laptop.

I have had problems with flash pens amd CD-RWs since they usually "lock up" on me after so long,
reporting that the data has been written permantnetly and cannot be erased. CD-RW's have been a
pain and they just act as if they are CDRs here. I don't know what I'm doing wrong.

I need to find some kind of digital device like a hardware mp3 recorder which will store at least
half a GB of data. Maybe an iPod or something if they can do this, but I am reluctant to spend the
?200.

In a few days, my trial version RecAll-PRO expires and I'm in two minds whether to buy this and
carry on wasting lots of CDRs, or look for something else.

Hope that helps, Pat. Anybody else have any siggestions?

Cheers

Here in Germany the prices are much higher and have been that for a long time.
In our Region (Wiesbaden / Mainz) standalone houses go for 400,000 EUR and more
and its land is quite small, not big enough for a decent MW-antenna

That's one reason why Germany within the EU has the highest percentage-rate of
people that rent a house/appartment and not own it.

Why do you transfer it via a CD ?
Can't you just temporarily connect both via LAN-cable? That's a lot faster

Jurgen

My networking doesn't work and I just cannot get it to work, and neither could the "expert" who
(didn't) set it up in the first place.

I actually got this to work once but there was a problem and I had to re-install the router software
and couldn't get the thing to work again. Otherwise networking the file across would be the perfect
solution.

I'm considered "computer literate" by my friends, but I only know just enough to be dangerous, as
they say.

176. MW DX

Yahoo group: skywavesmw
Date: 2005-11-06 06:55:19 UTC
From: patrice.privat
Topic: 176 Message: 176

Hi

positively booming signal from WWZN the Zone-1510 this morning, like Boston was at the tip of Britanny.
And heard the ID.
The New Jersey Koreans were on WWRU-1660 and there were weak signals on 1700, probably WJCC Marco Isl FLA.
Faint signals on 1680.
Cheers
Pat

Just a minor amendment on the "FSR" reference, this is "Fox Sports Radio" which I'd noted down in
shorthand while typing the log. I had forgotten to expand this.

From: John Faulkner
Topic: 178 Message: 182

Hello Michel,

My aerials are:

A Wellbrook ALA1530 (external model) http://www.wellbrook.uk.com/ALA1530.html

A 200 feet (or more) (61 metres) longwire running east/west. This runs along a straight hedgerow.

These are phased together through my home-made antenna phaser. Using this I can mix the two aerials
together and null signals from unwanted directions and leave the wanted signals. This works well
with some frequencies and less so on others. It also works better in the daytime as night time
signals tend to have more multi-pathing. Consequently it works better on some nights than others
depending on conditions.

The phaser box is due to be modified shortly to enable easier tuning as sometimes the required nulls
can be very tricky to set up.

The receiver I use is the original AOR AR7030 but with an additional 1.8kHz crystal filter. This
has proved to be of little use and only helps in rare circumstances, though I wouldn't have caught
WLNO New Orleans on 1060kHz if it wasn't for the 1.7kHz filter.

Hope that helps.

Best wishes!

we'll do my friend.
from what I have observed COPE network seems to run local programmes on both sides of 0800z, try 1134, 1224 or 882 khz.
I got Figueres pretty easy 3 or 4 days ago.
At least these ubiquitous Spanish nets should be useful instead of being frowned upon for taking up 75 % of our crowded EUR channels :-)°

how is your long wire ended (balun ?) ?

// No balun is used at the moemnt, but it is fed to my phaser box via around 50 metres of RG28 coax,
with two RF chokes in-line to cut down on general QRN. It is just an end-fed wire and there is no
termination resistance. It simply rests along the hedgerow. The RG58 coax is earthed to further
reduce QRN. There is an ATU in the phaser box so I could use this to match the aerials, though it
is not necessary.

what kind of phaser box?

// It is a home-made phaser box, not commercially available. It simply mixes my two aerials together in order to create the desired null on European interference. Photos at:

It is our member Julian who designed and built these my phaser box. I am not sure about the circuit
diagram. Julian?

The phaser was built to my own specification. It is still "the original design" and there are a few
modifications which may be done in the near future, time permitting.

You may want to wait until the newer model is finished.

Cheers

but what do you mean about locals?

for instance rne1,

madrid on 585 & 600kw or lerida with only 10kw.

// Yes, I was referring to the lower powered transmitters, or any station which has local programming. Depending upon individual views, Lerida could be roughly the highest powered transmitter to be considered "local". Some would say much less, say 2kW and lower.

There are certain transmitters that dominate the frequency, like Madrid on 585. These would not be
in my personal list of targets.

I don't have much time for daytime DXing these days, and when I do I usually concentrate on the FM
band. My area of interest is "transatlantic". I don't even look at the far east these days. For
transatlantic reception I record a particular frequency overnight (sometimes changing to a second
frequency half way through the night, if I am awake) and check the recordings at the tops of each
hour and half hour for any IDs. This is a much quicker method. If I am awake I will have a tune
around sometimes, though any "real time" listening tends to be done around midnight and at local
sunrise.

Each to their own.

Hi,

It goes back to 2004, but AER's España en Onda Media list, http://www.aer-dx.org/listas/eaom.htm, is fairly comprehensive and provides with partial details of local programming, mainly from RNE stations. Do not forget what Herman Boel is doing with his EMWG at http://www.emwg.info, it's amazing how even expert DXers tend to put it aside. Looking at its online version, one can easily make out a lot of local and regional programs schedules for each Spanish frequency.

SER and COPE stations often break their simulcast programs around TOH or TOH+30 for local newscasts and advertisement. That also happens in the evening and until midnight, when their signal is most likely to reach far away and night-time, nationwide programs, take over. Stay tuned a few minutes before national night programmes (usually described on each network Web site) commence. Also, during local sports events and "feiras" stations use to carry local coverage.

198. R: [skywavesmw] Spanish MW DXing

Yahoo group: skywavesmw
Date: 2005-11-06 22:19:08 UTC
From: Dario Monferini
Topic: 198 Message: 198

Hi,

Andy is always very busy, so he has done a fast reply, with useful suggestions but .....almost incomplete... details.
In my recent listening at Bocca di Magra together my friend Giampiero, we had sufficent time to monitorate many Spanish MW radio stations frequencies during the whole day.

RNE Radio 1 on Sunday has regional service only at 1205-1259 UTC and it is in // with RNE R.5 transmitters, this is a regional service. Monday to Saturday they carry same service.

RNE R.5 Monday to Friday has more regional/local services at 0625-0629 UTC, 0655-0659 UTC, 0725-0729 UTC, 0755-0759 UTC, ... this schedule continue all the day (this explain the slogan Radio 5 todo noticias "all news").
At 1705-1729 UTC and 1735-1759 UTC are located the regional-local evening service, and the best times to try local identifications.
Last block of regional/local service is 1925-1929 UTC and 1955-1959 UTC

CADENA SER network has a good web with some details :
http://www.cadenaser.com/parrilla_programacion/
I may add in the early morning they carry "HOY POR HOY" for many regional areas ....so you have HOY POR HOY BILBAO ..... HOY POR HOY VALENCIA ..... and so on, time is 0555-0559 UTC, 0625-0629 UTC, 0655-0659 UTC, 0720-0729.
Midday Regional/Local service is 1210-1255 UTC.
In the evening 1820-1829 UTC , 1835-1855 UTC , 1920-1929 UTC (this one called HORA 20....)
More later there are little local spots : at 2155-2159 UTC and at 2255-2259 UTC . However these are very useful to get local identifications and the stations carry also advertisings.
These local spots during football programs have differents times.
So on Wednesday or Thursday or Saturday & Sunday, the local spots are at irregular times.
After 2330 UTC another spot of 1 minute is carried but only on some SER stations.....

Unfortunatly this schematic list is not fixed, sometimes if special programs are transmitted the local spots may change the time.

COPE has not so many local programs, their WEB page
http://www.cope.es/paginas/programacion.asp
list old 2004 programs .....it seems is not up to dated...hi
Local programs are carried after 0810 UTC but not on all stations.
Another local service is at 1205-1259 UTC Monday to Friday.

At evening local program is at 1805-1859 UTC and this is the best
opportunity to identify many COPE stations.

ONDA CERO has a good informative WEB page
http://www.ondacero.es/OndaCero/OCDatosBasicos.nsf/PParrilla?ReadForm&Comunidad=12
Local service with news is Monday to Saturday at
0620-0629 UTC , 0720-0729 UTC, 1130-1159 UTC, 1320-1329 UTC,
Unfortunatly at evening no local programs, but only local SPOT of 2-3
minutes before the hour 1657-1659 UTC, 1757-1759 UTC, 1857-1859 UTC.

No doubts this is not a complete report about MW local-regional programs
from Spain, but may be some skywave MW member living in Spain may help
kindly and complete these informations.

I only add I needed 2 hours to do it, but I hope to have done something
useful to the group members....

A good list may be found at
http://www.playdx.com/html/spagna.htm
it has been compiled by skywave MW member Jordi Brunet and it is up to dated
to 2005.

If my English is not Oxorfdian I guess it is equally understandable and
Doctor Andy Lawendel will accept my apologies, if it is not at his high
school level.

Good listenings

Dario Monferini

Hi,

It goes back to 2004, but AER's Espa?a en Onda Media list, http://
www.aer-dx.org/listas/eaom.htm, is fairly comprehensive and provides
with partial details of local programming, mainly from RNE stations.
Do not forget what Herman Boel is doing with his EMWG at http://
www.emwg.info, it's amazing how even expert DXers tend to put it
aside. Looking at its online version, one can easily make out a lot
of local and regional programs schedules for each Spanish frequency.

SER and COPE stations often break their simulcast programs around TOH or TOH+30 for local newscasts and advertisement. That also happens in the evening and until midnight, when their signal is most likely to reach far away and night-time, nationwide programs, take over. Stay tuned a few minutes before national night programmes (usually described on each network Web site) commence. Also, during local sports events and "feiras" stations use to carry local coverage.

73s
Andy

199. OVernight Conditions

Yahoo group: skywavesmw
Date: 2005-11-07 12:52:28 UTC
From: John Faulkner
Topic: 199 Message: 199

Nothing to shout about at all. But I noticed WEPN had a good signal on 1050 after midnight. There
was no need for any antenna phasing either!

I recorded 1280 again overnight. There was a lively Latin shouting away deep in the noise, possibly
Portuguese but far too weak. Also religions talk at times with reeferences to chapters of the
bible, tris has to be VSB. All the "action" was before 03:00.

It was a good night to catch up on lost sleep!

Good DX!

1180 WHAM Rochester NY. Rolling news, mixing R Rebelde, Cuba. Good 08:00 08/11 JF
1290 YVLF R Puerto Cabello, Puerto Cabello. Promo and ID Fair 07:49 08/11 JF
1430 WENE Endicott NY. "Get the latest sports on The Team" ID Fair 07:45 08/11 JF

Managed to hear these in realtime. Windows decided to do a reboot at 03:00 thus losing my recording, despite auto-updates and the wireless connection being switched off. Good old micro$oft.
Still, I would only have recorded BBC R 5Live as I fell asleep listening to Anita Anand around
midnight!

WENE was surprisingly clear and dominant on 1430 at sunrise.

Other east coasters were still coming in at 09:00 but very poor.

Jan says "The geomagnetic field is expected to be quiet on November 8-9. A high speed stream from
CH196 could cause unsettled to active conditions on November 10-11"

Good DX!

210. Long Wave DX-ing..

Yahoo group: skywavesmw
Date: 2005-11-08 17:05:25 UTC
From: Blue Sprite.
Topic: 210 Message: 210

Gd Day 2 all,

Since a year I'm interested in LW-receptions. Mere by coincidence I discovered autumn 2004 that rather good DX can be made on the Long Wave frequencies. Always thought that condx. on LW-Freq's were only very marginal. Now I have other thoughts about this issue.
I was always convinced that LWDX was impossible on most LW-channels, because of 24/24 powerhouses like 153-Donebach, 162-Allouis, 177-Berlin, 183-Saarlouis, 198-Droitwich, 207-Aholming, 216-Roumoules, 225-Konstantynow, 234-Junglinster, 234-Kalundborg, 252-Clarkestown, 270-Topolná and 279-Sasnovy, all present here in NW-Holland mostly with signals like local powerhouses. Only 171 and 261kHz are "free" channels here !!
Not forgetting that 177(digital) is giving much QRM on 171 and 180.
Considering this, it's amazing, in my view, what I can catch with some patience and a SUPERTECH/SANGEAN ATS 803A+ferrite late at night between the blankets and an earphone on the much neglected Long Wave !

See here my LW-receptions of the evenings of last two days, (6 & 7 November).

B.t.w., are there other LW-Enthousiasts in this group ?

153 ROU Bod/Brasov
162 TUR Agri(under Allouis!)
171 RUS Bolshakovo(Kaliningrad/EastPrussia)
171 MRC Nador
189 ISL Gufuskálar
207 UKR Kyiv
207 MRC Azilal
207 ISL Eidar
216 RUS Krasnoyarsk(tent.)
252 ALG Tipaza
261 RUS Moskva-Taldom // 171 (Radio Rossiy)
279 RUS Yekaterinenburg/Ural.

Also caught a time sign at 00h30(GMT) at MW-1026kHz!
I'm thinking of IRN Tabriz ??

73's.

Don't you get it throughout the day in NW-NL?

When I stay at my parents (near Bremerhaven) I listened often to it during the day with a ferrite antenna. Unfortunately the audio is pretty low, they better should use an Optimod
I remember in the 60's 70's that it was stronger (like Droitwich, Allouis) but then Russian language didn't interest me at all.
Times definately have changed ...

171 Bolshakovo shuts down at 21:00 UTC (midnight local)

> 252 ALG Tipaza

Yup, every night it sat on top of Atlantic 252 (when it was there)

There's a theory that LW Tx from exactly the opposite side of the earth should give stronger signals because arriving from both sides of the globe they would add up at your location. But have not yet seen any reports that proved it.

Jurgen

Hallo Jürgen,

I could do this in German, but I fear that the other readers get problems ! Thanks for your reaction.

Yes, I have the impression last weeks with a little more QRV on LW, that when 171 Bolshakovo is in the air I can receive it, just especially during daylight hours. Many times Taldom/Moskva 261 is also receivable here with the same PX and is a nice source for checking 171. On the other hand, 171 Elektrostal(what's in a name ?) is also a TX that can be received here during condx. with it's 1250kW !!

Also Tipaza 252 is almost a constant guest here, no problems with Ireland. Clarkestown is direction West(270°) and Tipaza is South (180°), I only have to turn my radio 90° to switch between the two TX's.

I've not studied yet LW-propagation very deeply, but very big LW-distances must be possible. But I think, that I need much better aerials than what I use this moment.

I wonder if the two Icelandic LW-TX's (189 & 207) are regular guests alongside the eastern coasts of Canada and New England and whether maybe more LW-powerhouses from Europe are regularly received in that part of the american continent ?
My personal experiences alongside the northeast-coast of USA/Canada in the sixties & seventies show that MW-reception from Europe is very normal every day during dark hours.

222. Overnight 1390

Yahoo group: skywavesmw
Date: 2005-11-09 00:06:04 UTC
From: John Faulkner
Topic: 163 Message: 222

A disappointing night. We had a few hours of very heavy rain which affected the longwire connection
so I was down to just the ALA1530 overnight. No phasing possible so I stopped on 1390. Nothing
much heard here other than WEGP and R Fe y Alegria, but between 23:00 and 02:00 there was another NA
talk station mixing with WEGP. I never ID'd this. From 03:00 R Fe y Alegria took over the channel.
I have ID'd nothing other than WEGP from North America on 1390 this season and have still yet to add
WFBL to the log. Don't know why this one is so elusive.

The longwire had dried out and was back in service by 09:00 so phasing could be resumed. Quite a
few carriers were still in at this time but there was little in the way of proper audio.

Good DX!

Hi Paul,

Nice site you have, will return often to it, because of the fact that most subjects of your site have my attention, a.o. the 25-50MHz part of the VHF-Band. Will sign your guestbook !!

Listened last evening with special attention for the 279kHz frequency and there was indeed constantly a TX present, sounded asian but couldn't ID the station. Must definitely stem from outside Europe (BLR-279 is the only TX on this freq. in Europe !), or it must have been Yekaterinenburg(ex Sverdlovsk), but I understood, that the programme Radio Rossiy is off air during nightly hours, so TKM Asgabat TMR1 279 is, in my view, a real candidate.

Date: 2005-11-09 17:36:59 UTC
From: Dario Monferini
Topic: 225 Message: 225

Hi Jordi ,
on 1566 kHz there are just two UK stations,
County Sound Guildford
http://www.countysound.co.uk/contact.shtml
and BBC Somerset Sound usually at evening they relay BBC Bristol 1332
kHz....http://www.bbc.co.uk/bristol/ at night relay BBC Radio 4
BBC Somerset Sound has a very nice WEB page
http://www.bbc.co.uk/somerset/local_radio/

1530 kHz more stations from UK , hard to say which one...
from very useful WEB :
http://www.emwg.info/
G - BBC Essex, Southend-on-Sea (0.150) - also local programmes for southend of the county;
overnight relay of BBC Radio 5 Live
G - Pulse Classic Gold, Huddersfield (0.740) - 24h //1278 exc. local px 1400-1800; classic
and contemporary hits with local, national and international sport
G - Classic Hits 954/1530, Cotheridge (Worcester) (0.520) - 24h

Good Dxs !

Hallo Dario, Jordi & other readers,

Coincidence or not, today (wednesday 9-11-05) I received from the UK, alternating, two MWTX's on 1566kHz. One was ID-ing loud and clear "BBC Somerset" and the other was more difficult to read, but thanks to below messages I know and recognise now that it was "County Sound Guildford". Reception was with rather strong signals all day and evening here in the NW-part of Holland near the Northsea.

Remains one question : Does anybody know what ERP power both TX's have in use ? My info only speaks of 1 Watt RSL-stations on 1566 !!

228. Turkmenistan 279 khz

Yahoo group: skywavesmw
Date: 2005-11-09 23:24:38 UTC
From: Paul Logan
Topic: 210 Message: 228

Hi all,

Im intrigued by this nightly reception of Turkmenistan on a west facing beverage - its there at the moment 23:07 with om talking S9.

I wonder could some of the other group members try for it and see how its coming in.

My beverage terminates at the base of a quite steep hill - what im wondering is are signals coming in at perhaps a higher angle hitting the hill and then bouncing onto the wire.

On 153 khz Romania is almost dominant over Germany and the same effect is seen on medium wave where stuff from way east is quite loud compared to the attenuated western Europe stuff.

Any ideas anyone?.

Paul Logan,
Lisnaskea, N. Ireland.

With ATS 909 ferrite its not audible, but with my 1x1m frame it comes in loud & clear.
261 Sofia is just audible with ferrite

These channels are free at 00:30 UTC
189
216
243
270

on 216 I weakly heard Russian programming at 23:45
apparently it closed at 00:00

don't think it's Krasnoyarsk, when I listened to it in Kemerovo 2 years ago, it closed at midnight (local)

During my return drive home from Manchester yesterday evening (around 2am), I tuned the car radio to
1510. I was able to listen to a word perfect (excluding fades of course) WWZN on 1510 during my
drive across the Peak District.

I am curious, my car radio is the bog standard (unmodified, whatever make it is) which comes as
standard with the new Renault Megane.

However, conditions seemed quite poor when I got home with little in the way of North American (or
any transatlantic) activity.

Good DX!

234. 279 kHz

Yahoo group: skywavesmw
Date: 2005-11-11 08:45:12 UTC
From: Jurgen Bartels
Topic: 231 Message: 234

Last night at about 00:00 - 00:30 279 kHz
I heard Turkmenistan weaker than the night before
But in the background I heard Russian with news til 00:10 UTC but it was too weak to understand it. I don't know when R. Rossij turns on its Tx in the morning, but Ekatarienburg (probably too early for switch on) or Gorno Altai (Siberia). South Sakhalinsk (1500kW) is probably too far away

On 216 kHz there was no Russian this time as in the night before

Is there any LW-List (like the EMWG) on the net that covers Asia?

Jurgen

235. Re: [skywavesmw] 279 kHz

Topic: 231 Message: 235

Thanks to Victor Rutkovskys help I am now certain that the Russian on 279 was Jekatarienburg. They start at 00:00 and I was hearing their 1st newscast
The carriers of Ekatarienburg and Turkmenistian were mixing and created strong fast "fading" about 3Hz.

These list cover Asia Tx:

Hi Pat et al,

Had a look around myself this afternoon for Asiatic DX. Stopped on 1575 kHz for VOA Thailand. Not
sure if I heard them but I believe there was American English on the channel at times around 15:00
hours. Radio Farda was the dominant signal here. Then I moved to 1521 kHz where I I heard Classic
Gold, Forest of Dean Radio, R Beijing in Russian and an UNID Chinese language station, possibly
Taiwan. There was also a Russian "Mayak" interval signal on 1520 - anybody know which site this is?

Cheers

John

From: Günter Lorenz
Topic: 247 Message: 247

Deutschlandfunk 1269 kHz will be switched off on November 15, 2005, from 11:30 to 20:00 local time (=10:30-19:00 UTC) for urgent maintenance.

From http://www.dradio.de/dlf/sendungen/dlf-mw-lw/411364/
Abschalthinweis Mittelwellensender Neumünster 1269 kHz
15.11.05 von 11:30 Uhr bis 20:00 Uhr
Ein Hinweis in eigener Sache: Wegen dringender technischer Wartungsarbeiten muss der Mittelwellensender Neumünster 1269 kHz am 15.11.05 von 11:30 Uhr bis 20:00 Uhr abgeschaltet werden.

73,
Günter

248. daytime DX on LW

Yahoo group: skywavesmw
Date: 2005-11-13 12:03:54 UTC
From: Jurgen Bartels
Topic: 238 Message: 248

To find out what night time actually improves on LW I just checked the weaker channels with my 1x1m loop during noon time.

171 RUS Kaliningrad 1060km, strong
189 is totally empty, but heavy splatter from Europe 1 (140 km west from me)
252 ALG 1588km, strong
252 IRL 1080 km, fair when ALG is nulled out
261 RUS Taldom 2060km, fair
279 BLR Sasnovy 1480km, strong

Comparing Sasnovy (500kW) with Taldom (2500kW) the later one is much weaker while its "only" 600km further away but yet uses 2000kW more (presumed)

Interesting also 252: ALG (1500kW) ist much stronger then IRL (300kW), here the power difference results in better reception. Both path are partly over water.

Perhaps Taldom uses reduced power?

It is indeed interesting to observe that groundwave plays a dominant role for LW.

189 should be interesting to watch fro ISL or GEO (when it is active)

Jurgen

253. Outdoor LW/MW Antenna & Sony ST SB920 ?

Yahoo group: skywavesmw
Date: 2005-11-13 18:49:47 UTC
From: Lynton Towler
Topic: 253 Message: 253

Hi,
I have just connected the supplied LW/MW loop antenna to my Sony ST SB920 tuner for the very first time.
I can hear stations on LW and MW but am wondering if it is possible to somehow connect this to an outdoor antenna ?
The biggest problem I have is computer noise so an outdoor antenna would help alleviate that but how can I couple one to the Sony tuner ?
I'm assuming the supplied loop forms part of a tuned circuit so shouldn't really be messed with ?
I wouldn't expect the Sony to deliver particularly good performance on these bands but its all I have to work with at the moment so just thought I'd give it a try.

Lynton

254. DLF also on 270 kHz

Yahoo group: skywavesmw
Date: 2005-11-13 19:02:03 UTC
From: Jurgen Bartels
Topic: 254 Message: 254

Now I observe this a second time at 18:50 UTC.

In the background of 270 kHz I hear DLF, it is satellite delayed version of 153 kHz. A few days I noticed it to, but later on it was gone.

It can't be a problem of the Topolná Tx ?

It is still there now at 19:01

Jurgen

Probalby the "Luxembourg effect" - ionospheric cross-modulation.

If the Czech signal passes over Germany on its way to you, then that's most likely what you are hearing.

From: Jordi Brunet
Topic: 253 Message: 256

Hi to all, I have the same receiver in my Hi-Fi equipment, normally I use the loop subministred by SONY and the computer noise is present in MW clear channels or with weak signals, with the home made loop I have more reception, but I think this is a good FM receiver, but not for MW-DX, in my apartment I haven´t externar antennas, but next week I hope to receive a DEGEN DE31 Active Loop Antenna, then I will do a test and in few days I will comparate SONY with DEGEN in MW reception, with the PC off, 73+DX!

Yes you are right.
But it is not cause by the 153 kHz Tx in Donebach, but most probably by the 546 kHz of Thurngau (near Bayreuth) and lies 20km north of the line Wiesbaden - Topolná.
Thurngau is 230km east of me, and there the 270 kHz signal gets reflected, the total distance to Topolná is 702 km.

The DLF MW Tx are delayed by a satellite delay compared to 153kHz, and that delayed signal I hear on 270kHz.
I checked 270 BLR and 261 Moscow & BUL but don't hear the cross-modulation, those paths are further away from Thurngau and aren't affected.

259. Better Conditions

Yahoo group: skywavesmw
Date: 2005-11-13 23:41:27 UTC
From: John Faulkner
Topic: 259 Message: 259

Much improvement overnight though still just the "easier" stuff getting through.

The band was much quieter. Hardly any general static/mush allowed the AR7030 S meter to dip into zero on X band chanels and a few others.

I listened for a few hours throughout the night on 1280, 1390 and 1470.

1280: Not sure if I had CFMB at 22:00 with folk(?) music and French announcements. It sounded like "R Montreal" at the top of the hour. WFAU took over shortly after as usual. WCMN took over around sunrise and continued to 08:30.

1390: Latin station/s dominated but weak. There was some North American activity but it was not clear who or what. Still after WISA here.

1470: Coast to Coast was present after midnight mixing Vibracion. (Does WLAM have C2C at weekends?) This wasn't off-channel like WLAM's 1470.02.

1450: US sports.

1430: US sports.

1480: Latin and lively music, probably WMDD.

Around sunrise there were many NAs audible, albeit the usual ones and only weak to fair, but these were better/in abundance compared with recent nights.

Good DX!

From: Lynton Towler
Topic: 253 Message: 262

Thankyou for the response Jordi, I'd be most interested to hear how you get
on with the Sony receiver and Degen loop.
If it works then maybe I could construct something
similar.....

Subject: Re: [skywavesmw] Outdoor LW/MW Antenna & Sony ST SB920 ?

Hi to all, I have the same receiver in my Hi-Fi equipment, normally I use
the loop subministred by SONY and the computer noise is present in MW clear
channels or with weak signals, with the home made loop I have more
reception, but I think this is a good FM receiver, but not for MW-DX, in my
apartment I haven?t externar antennas, but next week I hope to receive a
DEGEN DE31 Active Loop Antenna, then I will do a test and in few days I will
comparate SONY with DEGEN in MW reception, with the PC off, 73+DX!

Tema: [skywavesmw] Outdoor LW/MW Antenna & Sony ST SB920 ?

Hi,
I have just connected the supplied LW/MW loop antenna to my Sony ST
SB920
tuner for the very first time.
I can hear stations on LW and MW but am wondering if it is possible to
somehow connect this to an outdoor antenna ?
The biggest problem I have is computer noise so an outdoor antenna would
help alleviate that but how can I couple one to the Sony tuner ?
I'm assuming the supplied loop forms part of a tuned circuit so
shouldn't
really be messed with ?
I wouldn't expect the Sony to deliver particularly good performance on
these
bands but its all I have to work with at the moment so just thought I'd
give
it a try.

Lynton

263. Remotely controlled Beverage antenna

Yahoo group: skywavesmw
Date: 2005-11-14 22:21:44 UTC
From: Jurgen Bartels
Topic: 263 Message: 263

I came across this article:
Remotely controlled Pennant antenna
http://www.hard-core-dx.com/nordicdx/antenna/loop/flag/connelly.html

Changing the resistor value steers the main lobe a bit.
Now I wonder if this property is also available with a beverage antenna?
Has anyone tried this out yet?
The problem is that you can't easily control the resistor remotely. So a friend suggested for a test purpose setup, to use a potentiometer that is turned by an actor of a 27MHz remote control (as used in model airplanes). So when you move the joy stick back & forth the pot gets proportionally turned by 0..90 degrees.

If the steering lobe property can be confirmed, the final solution for controlling the resistor can then be devolped.

The idea is intriguing and needs to be examined.

Jurgen

Topic: 263 Message: 264

(Hopefully this message will not arrive three times - still problems posting here - the fault probably here somewhere)

Julian and I carried out some experiments with remotely a controlled beverage antenna a couple of years ago. I will have to ask Julian to come in here as I cannot remember the exact details (my head is full of details of aerial experiments and I get mixed up in my old age) but suffice to say that we were quite disappointed with the results.

The location was Big Moor to the west of Sheffield using a 0.8 mile long wire fence as an antenna. Bear in mind this fence antenna had previously brought in rarities like 1250 CHSM Steinbach, Manitoba, 1630 KKWY Fox Farm, Wyoming and 1690 KDDZ Arvada, Colorado!

The NW end of the beverage (a convenient moorland car park) would have been the idea place to DX, rather than the rather more exposed parking space by the gate at the SE end, which was quite exposed to high-speed traffic.

I basically remember there were losses in signal and the nulling was not quite as deep as we had hoped.. Julian?

What midwinter anomaly?

Much better transatlantic conditions on MW this morning, resulting in what is probably my biggest single overnight log so far this season. Several "personal firsts" were received too.

I don't have time to check my recording just now so will look at it later this afternoon.

Good DX!

Yahoo group: skywavesmw
Date: 2005-11-16 01:58:11 UTC
From: Julian Hardstone
Topic: 263 Message: 269

John & Jurgen - Our tests with the Beverage were trying to make a reverse-direction Bev, using two wires as a transmission line and antenna simultaneously, as described in the early literature. It did not work with the fence wires 8-{

It is necessary to select the termination for a Bev in order to get the best null in the reverse direction, but there is no possibility of steering the null with a single antenna. Once you have optimised the termination, it is not necessary to vary it, so all you need is a pot, and a friend with a mobile phone or PMR446!

A steerable null is possible with two smaller antennas, as per
http://www.hard-core-dx.com/nordicdx/antenna/loop/k9ay/k9ay4.html
and
http://www.hard-core-dx.com/nordicdx/antenna/loop/k9ay/k9ay11.html
but I don't know if anyone has published a design for the control box. I guess the servo would be an excellent idea for the variable terminations, and you could use radio or wired control.

Good luck - Julian

271. A Few Bits & Pieces

Yahoo group: skywavesmw
Date: 2005-11-17 11:29:39 UTC
From: John Faulkner
Topic: 271 Message: 271

I have slept right through for the last couple of nights and have had the recorder running on 750, 970 and 1190.

Summarising ...

US talk station on 970, never strong enough for clear ID.

750 has a Latin station mixing with CBGY, Caracas mentioned.

1190 WLIB dominant but a Spanish station also audible.

I'm quite pleased with my recording of WLIB 1190 this morning ...

http://www.skywaves.info/2005/1190-0417gmt-17-11-05-WLIB.mp3

Also the UNID Spanish if anyone want s a listen ...

http://www.skywaves.info/2005/1190-0400gmt-17-11-05.mp3

http://www.skywaves.info/2005/1190-0700gmt-17-11-05.mp3

I am really impressed how the phasing box cleans up 1190. This channel is normally SPLATTERED TO DEATH with no hope
whatsoever of hearing anything. The WLIB recording above demonstrates how the channel can be cleaned up - stunning!

Good DX!

John

Yes, I can imagine, that it is very tough to achieve

> the null with a single antenna. Once you have optimised the termination, it
> is not necessary to vary it, so all you need is a pot, and a friend with a

Well not quite. It varies a bit with frequency and the current condition of the
soil underneath it. But maybe that makes not such a big difference after all.
But my 1st assumption of a steerable directivity was incorrect.

This is interesting to read, look a bit down at Figure 6.
"F/B ratio versus antenna length."
"The front-to-back ratio of a Beverage varies considerably with the length of
the antenna, reaching a local maxima at intervals of one-half wavelength."

http://users.rcn.com/oakridge.ma.ultranet/Beverage_info/RCT_Beverage/RCT_Beverage.html

and found some interesting comments here
http://groups.google.com/groups?q=beverage+antenna+resistor/&sourceid=opera&num=50&ie=utf-8&oe=utf-8

this is quite good to read
http://groups.google.com/group/rec.radio.amateur.antenna/browse_thread/thread/3385e0ca9bf3befb/b10b1a69c54b5486?lnk=st&q=beverage+antenna+resistor%2F&rnum=15#b10b1a69c54b5486

The second one's a nice slogan for America Sinfo (http://www.amradioamerica.com/v2/programacion.aspx), classical music from Baires, John.
Not 100% sure about your first, I'd say Radio America too, maybe "la perfecta" (it's fast, and it could be another station, ending in "ia"). The accent however is quite porteno, really.

Andy

Thanks Mark, yes, you're probably right. The Caracas station is the most regular Latin on the frequency. But I must add a word of warning about the WRTH. I would not trust it's accuracy regarding stations, especially from 2002.

The WRTH, as with many other publications like this, are known to be out of date on the day they are published. This would be particularly true with the North American scene where stations change call, get bought out, change formats, etc. But the WRTH is still a popular publication for SW, addresses, etc.

Cheers!

From: John Faulkner
Topic: 280 Message: 280

Nothing to report really. Monitored 1190 overnight again to reveal WLIB and a nice ID from R America at 07:00 again! I
heard a French signal too around midnight here, possible ID at toh but not clear enough. Who could this be?

I also logged CHIN on 1540 but that was it. I didn't seem to be getting the same as John in Hemel. Odd that CHIN was
virtually the only TA signal at midnight, apart from 1510 WWZN and 1520 WKBW. No trace of WDCD on 1540 either.

The 16th was the same - John seemed to be getting some TA around sunrise (840 WHAS for instance) but there was none of
this here. The band was devoid of TA that morning.

Weird eh!

early in night.
1590 XEVOZ Mexico City, Radio Reloj, yl, talk.cuckoo
on minute - weak. 07:34
610 WIOD presumed - talk show, good, 07:52
790 WAXY sports, id, 07:57 good
07:50 - 08:00 Cuba, Rebelde on 600 strong, 610 under
WIOD weak, 670 good, I also could have swore that I
had Rebelde on 660 // 5025 weak - anyone know if they
are on this Freq???
790 R. Reloj, morse id under WAXY.

and that was it not too much to get excited about.

regards

Paul Logan,
Lisnaskea, N. Ireland.

Don't know about the latest edition but in wrth 2002 only R.Progreso
listed on 660 but rebelde is listed on 650 and 670 so it wouldn't
surprise me if they now have a tx on 660

700 WLW Cincinnati OH. ?Seven Hundred WLW? ID, phone-in. Good 07:21 19/11 JF

740 CHWO Toronto ON. ?The All Night Jukebox on AM 7-40? As per prog schedule at http://www.am740.ca/schedule/friday.htm Fair 07:23 19/11 JF

970 WZAN Portland ME. Ads before the hour, ?AM 9-70 WZAN Portland? ID. Sportstalk. Dominant but not alone on channel.
2nd US stn? Fair 04:59 19/11 JF

1250 CJYE Oakville ON. Presumed with God, God and more God! (Later followed by yet more God) V Good 00:35 19/11 JF

1570 CFAV Laval QC. Oldies, ID ?CFAV - Radio Boomer? then interview. French language Good 00:34 19/11 JF

Not a bad morning at all but I didn't hear anything new. 970 was my chosen channel overnight. Two north Americans
heard here with WZAN easily being the dominant station with non-stop sports waffle.

Many North Americans audible. Great signal from WKBW 1520 too around local sunrise.

Good DX!

Hi John,
greetings from Italy.
Right past night and this morning I had a Dx-session in country side south to Milan.... our "fade out" around 0645 UTC....
We had many UNIDs which I have not listed in the report I add here ....but one of them on 1570 kHz feet with your Canada log....
Keep on the good Yahoo Group skywavemw I love to be in touch.
Dario

Hi !

Dario Monferini + Paolo Albini

Ricevitore ICOM R-75
Antenne : 2 x EWE external wires + DLA LOOP INDOOR x MW + accordatore d'antenna.

Dx night started 18 november at evening and ended at 0630 UTC hours !!!
with signals from North America and South America.
Solar Flux remained stable at 101 WWA value, A-index WWA value very low 2 & 3.

252 19 Nov. 0310-0315 Ireland R.1 in //567 both channels very strong signals.
846 19 Nov. 0305-0309 R.North,Redcastle,Ireland, Country pop music no stop. good peaks and almost no phading.
1008 18 Nov. 1810-1820 Ser Girona,Catalunya + Ser Alicante Pais Valenciano. Regional services. Looped from 10 Gold.
1026 18 Nov. 2256-2258 Ser Reus Hora 25 Catalunya + Ser Jerez + Ser Jaen , all 3 with local advertisings. (no traces of Israel in Arabic or Nigeria in Hausa)
1044 18 Nov. 2258-2301 Ser Valladolid, local advertising (ended one minute after 2300) + Thessaloniki + Germany.
1080 18 Nov. 1920-1929 Ser Huesca Hora 25 Aragon + Ser Mallorca Hora 25 Balears + more weak Onda Cero Toledo (but in chain with Onda Cero Madrid)
1220 19 Nov. 0221-0225 R.Globo,Rio,Brasil. Splash from Cope & Herri Irratia San Sebastian.
1224 18 Nov. 2302-2308 Herri Irratia San Sebastian, night own program + Cope stations.
1269 18 Nov. 1844-1848 Cope Figueres,Catalunya, Advertising about Horses school in Girona area.
1287 18 Nov. 1852-1853 Ser R. Lleida,Catalunya, News about car traffic in Catalan + Ser R. Castilla, Burgos, Local news +
Galei Zahal Israel (but not so strong)
1305 18 Nov. 1854-1859 RNE R.5 Ciudad Real, with Castilla La Mancha local news +RNE R.5 Bilbao with local news Vizcaya + Pure FM Belgium (usual pest

on this channel)
1359 18 Nov. 1640-1645 Classic Gold 1359 Coventry, UK, Ids + jingle (no traces of RNE R.1 Madrid, s/on later ????)
1390 19 Nov. 0205.....0558 R.F? y Alegria,Caracas,Venezuela
+ around 0555-0605 another Religious station in SS with sermon but apparently not s/off may be R.Lumen Maracaibo, Venezuela ??.
1470 19 Nov. 0145.....0630 R. Vibracion,Carupano,Venezuela
..... many good peaks "Musica Musica Siempre Musica en Vibracccioooonnnn!!!"
1470 19 Nov. 0550-0620 R. Formula XEAI,Mexico DF, romantic songs , up and down Vibracion.
1500 19 Nov. 0031....0627 WTOP,Washington,USA, many good peaks, not so much splash from 1503 & 1494 kHz
1510 18 Nov.-19 Nov. 2340.....0635 WWZN,Boston,USA,
sports radio .... first to come and last to fade out...
1520 19 Nov. 0155....0230 WWKB,Buffalo,USA, great peaks and great songs of the 60's "Hanky Panky" for exemple
Jinles "KB Radio 15-20" (almost not so much splash from SER 1521 kHz)
1521 19 Nov. 0520-0529 Classic Gold Digital,UK, Id Jingles, WEB page....
(SER 1521 kHz almost nulled by DLA loop)
1530 18 Nov. 1620-1629 R.Costanza,Romania, Local Ids,
+ Romania Actualitata with news. (sounds very stupid they have two differents programs on same channel). Strong signals....Vatican Radio starts at 1630 hours.
1540 19 Nov. 0330-0359 CHIN,Toronto,Canada, in GREEK !!!
....first I thinked to a pirate Greek...but speaker with greetings to Ontario Greek listeners, and lot of news.... (not so much problems with 1539 kHz SER station) luckly Germany starts at 0400 hours.... First time heard after many many many years, by me.
1566 18 Nov. 1555....1910 County Sound,Guildford,UK + BBC Somerset Sound with local news. + PESTIFER GREEK pirate
(but almost not so strong as usually)
1620 19 Nov. 0140-0150 US Virgin, in EE , some problem with Greek Pirate on 1623 kHz (with underground modulation and 5 kHz wide frequency + DRM splash from Vatican Radio 1611 kHz)
1630,1 kHz 0230....0244 "BASTARD" Greek Pirate not so strong and with even country greek folk songs .....
1640,4v kHz 0232....0242 Another Pirate from Nederlands with Polka folk music and "real" drunked speaker....
1700 kHz 19 Nov. 0238.....0450 KVNS,Brownsville,Texas,USA
with lot of news in EE.

Apologizes if any mistakes ....but not yet gone to ...spleep..hi

Good Dxs

Nice log Dario! Congratulations!

Not done too much outdoor listening this season so far (for obvious reasons, tractor, etc.) but I am planning a trip to NW Wales soon - depending on conditions. Can't wait! ;0)

Good DX!

289. Luxemburg Effect

Yahoo group: skywavesmw
Date: 2005-11-19 17:18:27 UTC
From: Jurgen Bartels
Topic: 289 Message: 289

http://www.xs4all.nl/~aobauer/FTM%20Luxemburg%20effect.pdf

This contains detailed measurements made from across Germany to study the Luxemburg Effect from the German Post Office in 1934/35, because they were afraid that the effect would seriously hamper radio reception.
The article is in German and was scanned from a magazin.
Interesting: Its cost was 9 Pfennig then. You don't even get a stamp for that nowadays.

They also did a test by tansmitting a silent carrier in Beromünster and listen to it in Berlin. They heard simultanously on that carrier Luxemburg and Droitwich and a few unid others

They also drove from Trier to Berlin and made measurements on that route.

Jurgen

Topic: 291 Message: 291

Hi all, thought it was time to post now that WRTH2006 has been sent to the printers and I can get some radio time!

Has anyone (particularly in the UK) had success with Asian stations recently and if so which ones? My antenna is fixed at 030/210 so would be reasonably good for Asia (although lousy for North America).

Also, I see a lot of interesting logs but quite a few don't have any details of equipment or receiving locations which I for one would find useful (if someone is using a similar antenna then I might also stand a chance etc.). Just a thought!

I can't really comment too much on the national/domestic radio side of WRTH, except to say that each year the data is revised and improved. As some one quite rightly pointed out, American stations come and go and change call letters etc faster than we can keep up with but even so, WRTH is THE best book of it's kind.

The international radio section is more accurate than ever (our accuracy is checked against our competitors, and each year we beat them by a larger and larger margin). If you have not seen a WRTH since 2002, then I would recommend the 2006 - you will be in for a very pleasant surprise (also we do downloadable updates and full summer schedules for free via the website)!

Sorry about the blatant plug, but I saw some comments regarding WRTH and I thought I should put my few pennies/cents worth in.

Hopefully I can get some MW loggings done over the winter season.

Hi Jurgen, the page was written in publisher and isn't scalable (I'm not that clever!). The solution is to either increase or decrease the text size in i.e. etc. until the text sits where it should. I have checked the pages with i.e.6 and firefox (best viewed at 1024 x 768).

Hope that helps, and you find the pages useful. I will be updating soon with updated NDB lists etc.

294. 1590

Yahoo group: skywavesmw
Date: 2005-11-21 22:18:38 UTC
From: John Faulkner
Topic: 294 Message: 294

Not been able to listen much over the weekend. I left the tape recording 1590 overnight on the 19th. This was quite a
busy channel with several stations - possible Brazilian just after 01:00, an English talker around 01:25 and 2 x Spanish
around 04:00.

Possible IDs on the Spanish of R Reloj from Mexico and R Real from Uruguay. Very difficult in the splash - I had the
phaser tuned up nicely at the beginning of the session to eradicate the mess from 1584 but this increased as the night
wore on, I suspect due to changing conditions.

Didn't note anything much at all at 05:00 this morning when I arrived home. Flat as a flat thing!

Good DX!

From: Julian Hardstone
Topic: 289 Message: 296

Interesting to see the effect was known back then, when Lux's 150kW was 'the strongest tx in western Europe'. Was it known then that the mechanism of the Luxemburg Effect was due to thermal effects in the ionosphere? (sorry, reading the German language is a little difficult for me). More recent research into the same effect has used massive power levels from the ionospheric research instrument (IRI) in Alaska:

297. Beverage/Wire Phasing

Yahoo group: skywavesmw
Date: 2005-11-23 09:33:11 UTC
From: John Faulkner
Topic: 297 Message: 297

I'm considering using my antenna phaser on a beverage.

It strikes me that I would get far better nulling power if I had something to mix with the beverage. But what would be
the best way to do this?

Would I be better mixing a shorter "source" longwire with the beverage? Or perhaps two "proper" beverages would be
better.

Then there's the question of how to arrange the two wires. Would they work better against each other if they were
running in ...

the same direction?
at right angles to each other?
180 degrees apart?
or only with a slight angle, say 30 degrees or so?

I realise that two "wires" would need to be arranged so that the feed points were at least a hundred feet or more apart.
I have plenty of RG58.

Any tips appreciated!

Thanks

John

From: Jurgen Bartels
Topic: 299 Message: 299

Just heard in the news that made me wonder if late night DX now
gets tougher in the UK ?

Why?
Because in the UK you don't get kicked out of the pubs at 23:00 any longer, so
loosing *the* reason to go home and do DXing ? :-)

Jurgen

From: John Faulkner
Topic: 299 Message: 300

You're not kidding Jurgen! But it's much worse here now. When you leave the pub you have to climb over all the drunks lying in the streets. Then there's the problem of dodging those who are sober enough to be fighting on your way to the bus station. There are beer glasses flying everywhere too. You really need to have your wits about you.

Hopefully there are some taxis or buses still running (many will have been set on fire) Getting on and off the bus can be tricky - more drunks and piles of vomit everywhere. Then if you are lucky to get home you find your aerials have been trashed by some thugs who are worse for wear after drinking too much Stella!

What is the world coming to!

That's just my take on the ridiculous debates we're having at the moment which suggest there is going to be an increase in binge drinking and general drunkenness on our streets folowing the intorduction of our new licensing laws. (ahem, mustn't get political now)

Personally I am a big real ale fan and, I hate to admit it, but I too am rather partial to a good pint (or six). It's the next best thing to DXing!

Plus, it's amazing how you can hear a lot more exotic DX after a pint or two, even with poor conditions!

Hic!

303. Beverage / Frame results / X-band

Yahoo group: skywavesmw
Date: 2005-11-25 10:35:58 UTC
From: Jurgen Bartels
Topic: 303 Message: 303

A few days ago I finally set up my 180m beverage about 10 ...50cm over ground. An old railway runs along our house, so I put it up along its route. It took me quite a while to come to this idea. Often you don't really think of the most obvious. :-)
The railway runs to the west, that dictates the direction of the beverage as well.
The antenna is fed with a 50m coax. The shield towards the end of the antenna is connected to ground via a capacitor. This dramatically reduces the pick up of the coax itself. Disconnecting the antenna from the input of the transformer shows that only the strong locals still get into the Rx, well that's acceptable.
The positive: the antenna is quite noise free with my R-390 which itself is quite noise free. On the first night I picked up on 1386 Carillon Radio, Loughborough with 1Watt.
Last night the X-Band opend up.
1620 WDHP VI came in so strong, first I thought it would be a Dutch pirate also found but not ID'ed
1630
1660
1680
1690
At about 0200 when I went to bed only 1620 was left over.

Fine I thought, let's compare it with my tuned 1x1m frame antenna and held my Sangean ATS 909 .into it for inductive coupling.
And surprisingly it performed similar, a station that just faded out of the noise on the beverage showed up on the frame as well. So, sensitivity wise the beverage was not better. But the frame picks up more noise since it's standing in my apartment and it is about 5m above ground (1st floor), much higher than the beverage. I assume: would it be standing where the beverage lies, it would be as quiet as the beverage.
But: For WDHP I have to point the frame south-west, while the beverage points due west.
So far my results: the bevarage does not outperform the frame sensitivity wise. This same result I found about 25 years ago when I lived in a farm house in northern Germany. At that time we got the powerline underground, and that left the overground powerline a few days unused before it got dismantled. It ran basicly 1km to the west, 6m high. So I quickly connected the R-390 to it and scanned the entire MW during miday, fortunately it was summer so no skywayves that could distort the results. Then I also compared it with my frame, and found the powerline only slighty better. But the powerline was better in suppressed signals arriving from behind.

Well, the reason of last nights results might be due to the south-west lying Tx while the bevearge pointed to the west.

However the best results seems to be placing the frame outside further away from the house. But then I need a long arm to tune it. And it also will be noticed by others which I don't like.

How was the X-band last night in UK and Ireland ?

Jurgen

Very interesting Jurgen!

I have yet to go through my overnight recording but I know the general conditions were not good for transatlantic
reception following overnight K4's. The X band was a little better. As I'm sure you will know, reception in the X band
does not always corelate to that of the rest of the MW band.

I am very surprised your beverage did not exhibit more gain than your loop. I have never used a capacitor when grouding
the coax screen. Have you tried removing the capacitor and just grounding the coax without? Should be fine for a short
run of RG58.

Also, how are you terminating the beverage? Is the far end "open" or terminated to ground? and if so what vaule of
resistance are you using?

From experience, I have found that, no matter how well "tuned up" the beverage, it is less capable of nulling out
signals from the opposite direction than my phased loop/longwire would be. Maybe this is because I tune up the phaser
for each channel accordingly. A beverage is generally set up for the centre of the mw band and left at that. The
beverage should come into it's own under more favourable conditions. When I have used a beverage under poor conditions
it has always been a waste of time.

It will be interesting to see how you fare with this beverage over the coming season. Good luck!

Hi John

> reception following overnight K4's. The X band was a little better. As I'm sure you will know, reception in the X band
> does not always corelate to that of the rest of the MW band.

Yes, only 1510 and 1520 were active. 1390 / 1470 were very weak.
1520 is quite bad for me, I can only use 2kHz bandwidth because a UK and ESP station blocks it. A few years ago is used to be empty.

I asked you about last night reception, because it may be that reception is great here and bad at your location and vice versa

> I am very surprised your beverage did not exhibit more gain than your loop. I have never used a capacitor when grouding
> the coax screen. Have you tried removing the capacitor and just grounding the coax without? Should be fine for a short

The capacitor 470nF acts for that frequency as a shortcut but prevents 50Hz current flowing to ground, since my R-390 case is not isolated from neutral.
And the voltage between neutral and ground is never 0.00V

Note, the beverage is not silent, I hear background noise, so a higher level would not change anything. Have you ever compared it with a tuned frame?
Your are using a untuned loop, have you compared it with a tuned frame?

> Also, how are you terminating the beverage? Is the far end "open" or
> terminated to ground? and if so what vaule of resistance are you using?

It is terminated with 560 Ohms
Also, I disconnected the beverage from the transformer and measured for the pure interest the resistance between wire and ground to see how good "ground" is. It was 1k. So minus 560 minus the wire resistance it is not bad for a 180m distance thru ground. I put 1m rods into the ground.

> From experience, I have found that, no matter how well "tuned up" the
> beverage, it is less capable of nulling out signals from the opposite

Yes, the F/B is not that well, I need to tweak the resistor to find out. Also I noticed that from the south the 1017 local still comes in quite strong. IO expected it to be weaker.

> It will be interesting to see how you fare with this beverage over the coming season. Good luck!

It will be quite interesting to see what you guys up there get compared to what I (at lower degrees latitudes) get during certain conditions. It may be that only one side may profit at a time.

For example http://dxlc.com/solar/ did not mention X-band last night.

Jurgen

I asked you about last night reception, because it may be that reception is great here and bad at your location and vice versa

Not only that Jurgen, but it has been apparent recently that DXers only 100km apart have been reporting different conditions at the same time. It seems odd that reception can vary over such short distances. The differences concern the levels of apparent TA activity rather than the reception of individual stations.

Your are using a untuned loop, have you compared it with a tuned frame?

I have used various loops ove the years, tuned and broadband - the current one being the Wellbrook ALA1530 which is superb if rather costly. I can make the ALA1530 "tunable" through the phaser box though I tend to run it "straight through" mostly and tune the longwire to obtain nulls.

Yes, the F/B is not that well.

Perhaps you would be better with a solo loop or loop/longwire phasing system during the poorer conditions and just use the beverage when conditions are good. European interference is a problem here on a beverage. It is also a problem up in the far north-west of Scotland, though a little less so - another argument for using a phased system.

Better conditions should be just around the corner with a little luck. December and January can be very good months. As has been previously discussed, November and Fabruary are notoriously poor. October is the clear winner while September and March can also be good.

Good DX!

Gosh John, your island has moved to the west, look at the time of your last email. No wonder you have great DX reception, ehm.. that should be local for you now. Better drop the anchor :-)

> 100km apart have been reporting different conditions at the same time. It
> seems odd that reception can vary over such short distances. The
> differences concern the levels of apparent TA activity rather than the
> reception of individual stations.

Interesting I was not aware of this.
Apparently there are some magnetic iregularities that causes this.
I plan to visit my parents during Christmas in Northern Germany and plan to set up a beverage there. It's on the country side with lots of space near the northsea. When I lived there I did not know anything about beverages and I never took the chances back then. Now I am smarter but live in the wrong spot.

> Perhaps you would be better with a solo loop or loop/longwire phasing system
> during the poorer conditions and just use the beverage when conditions are
> good.

That's probably a good idea. If there are higher levels of TA then it is acceptable to introduce a bit more local interferences caught by the indoor loop

> Better conditions should be just around the corner with a little luck.
> December and January can be very good months. As has been previously

Yes, I was used to the Dec/Jan scheme. Did not know that October is good. Or did you mean only Oct 2005 ?

Since there is an old railway line passing our house, I will try to hook up a wire to one of its track and connect that instead of tehbeverage, to see what that brings. But I do not know how to connect to the rusty thing. Probably have to drill a small hole into it. But don't know how the neighbours may react. :-)
The railway is now a "Museum railway" that only runs on a weekend once a month.

Jurgen

Gosh John, your island has moved to the west, look at the time of your last email. No wonder you have great DX reception, ehm.. that should be local for you now. Better drop the anchor :-)

// Ahem, yes! It's the battery in the PC. Doubt I'll ever get around to replacing it until I absolutely have to. Still, I'll take advantage of being closer to the US/Canada while I can ;0)

Yes, I was used to the Dec/Jan scheme. Did not know that October is good. Or did you mean only Oct 2005 ?

// Traditionally, October has always been the best month for as long as I can remember. I would vote September into second place, then December/Jan, then March. It is surprising how much North American DX can be heard, with the right conditions, in April and May too, also August. The path for South American DX doesn't disappear at all during summer but of course the DX window gets shorter. So, theoretically, North American DX is more seasonal whereas South American DX is all year round (for the benefit of others). November and February suffer from the infamous "midwinter anomally", which I have also noticed can affect things over the Christmas / New Year period.

Since there is an old railway line passing our house, I will try to hook up a
wire to one of its track and connect that instead of tehbeverage, to see what
that brings. But I do not know how to connect to the rusty thing. Probably have
to drill a small hole into it. But don't know how the neighbours may react. :-)
The railway is now a "Museum railway" that only runs on a weekend once a month .

// Hmmmm, we would never get away with that here. Such acts could be misinterpreted (but good luck with it anyway :o)

Just checked my overnight recording of 1390 ... only WEGP Presque Isle ME present and with a weak signal. WFNA Charlotte NC was fair to good on 1660, however. It's ESPN sports on WFNA. I caught a local ID at 07:56.

Good DX!

From: Sean (G4UCJ/G4001SWL)
Topic: 312 Message: 312

Well after a weekend of hard CW contesting, here are the pick of the 53 countries/entities heard on top band/160m (out of 148 in total):

North America: USA (East Coast); Canada (East Coast); St Pierre & Miquelon.

Caribbean: Turks and Caicos; US Virgin Isl; Trinidad & Tobago.

Africa: Tunisia; Mali, Madeira.

Asia: Asiatic Russia (Siberia); Tajikistan; Oman; Japan

I think the most pleasing was Japan, first time heard on 160. No South Americans heard which is a little disappointing but overall it was a good contest, just a shame that the higher bands (21/28MHz) were not that good this year but that is to be expected given the state of the sunspot cycle.

I hope that MW was as good!

From: John Faulkner
Topic: 314 Message: 314

There's no doubt we all have difficulty DXing on certain mw channels. The government would make a fortune if they
introduced congestion charges in this band!

Here in the N Mids there are many channels which are blocked by strong Europeans/UK signals and any DX would only stand
a chance of being heard if it was very strong. My phasing system seems to do little to help on these channels too. I
would guess that the majority of these difficult channels are the same across the UK. I wondered if it would be of
interest to compare notes at different locations? These are my problem frequencies ...

Odd that they are in the top half of the band. Note the cluster of channels round Virgin - VERY splattery!! The
graveyard chanels of 1230, 1240 & 1340 are interesting as I can get a reasonable null and hear audio on rare occasions.
Last stations I ID'd on 1230 / 1240 were WSBB / CKIM many years ago. I have bever ID'd anything on 1340.

If there is enough response I will draw up a chart to show comparisons.

Good DX!

1250 CJYE Oakville ON. "Joy 12-50" ID. Jesus Christ! Good 23:56 28/11 JF
1430 CHKT Toronto ON. Programme in Tamil // internet stream Weak 10:01 29/11 JF
1460 WDDY Albany NY. Radio Disney // WQEW 1560 Fr/good 09:33 29/11 JF
1470 WLAM Lewiston ME. Still with oldies. Never seem to get this one too well of late Weak 07:49 29/11 JF
1520 WKBW Buffalo NY. ID "KB Radio" and CBS News. Still rolling in at this hour! Fair 10:00 29/11 JF

==========

Pretty sure I had R Rebelde on 620 around 01:00. Spanish presenter with music, v weak under CKCM.

Midnight was very good with impressive signals from many North American stations. Sunrise was less impressive though things lifted considerably after 09:00. I logged WKBW at 10:00 as this is the best TA signal I have ever had at this time. I never do well with late openings here but to hear so much DX at 10am is quite amazing ...

1130 WBBR - weak
1180 WHAM & Rebelde
1190 WLIB
1250 CJYE
1360 WKAT (in // internet stream)
1430 had sports (probably WENE) mixing CHKT
1450 WKXW
1460 WDDY
1560 WQEW
1570 CFAV
1600 UNID Spanish

All after 10:00 GMT and fair at best. Note the top of the band was best but the whole of MW was good earlier in the morning.

(Looks like my earlier DX alert never arrived. I posted this around 09:30. Tbis is now my THIRD attempt to post this to the group. Why the **** am I having so much difficulty with postings lately? This message has arrived on two other groups so why this one is having the problem I do not know. I almost feel like removing all my antispam/antivisrus/firewall software as I'm sure there's something in there which is clogging up the system. I can't even log into my Skywaves yahoo account anymore without having to go through the "secure" option.)

Good DX!

319. Re: [skywavesmw] Re: Luxemburg Effect

Yahoo group: skywavesmw
Date: 2005-11-29 18:56:14 UTC
From: Jurgen Bartels
Topic: 289 Message: 319

Hi Julian,

> Interesting to see the effect was known back then, when Lux's 150kW was
> 'the strongest tx in western Europe'. Was it known then that the mechanism
> of the Luxemburg Effect was due to thermal effects in the ionosphere?
> (sorry, reading the German language is a little difficult for me). More

The last chapter deals with it.
I don't know modern days explanation, but the article says, that the wave energy gets a bit absorbed so that the electrons of the "heavyside layer" move faster and thus the number of collisions of free electrons with atoms increases. The faster the electrons move the more absortion takes place. I guess you may call this thermal effect?

Interesting are Abb 1 & 2

Abb1.
Deutschlandsender is the "interference transmitter" (Störsender)
Neustrelitz & Rügen Radio are observer locations (square & round symbol)
From these they listened to the other Tx (Breslau München etc) and marked with their symbol how that Tx was effected by the Störsender :

filled = Störsender modulation was heard loud (laut)
half filled = Störsender modulation was heard a bit (leise)
empty = Störsender modulation was not heard (nichts)

example: full circle symbol drawn near München:
In Neustrelitz München was heard with strong modulation of Deutschlandsender

Interesting:
In Rügen they heard Breslau with a bit of Deutschlandsender although it is not in line with the path. They actually say that is has a wider range, it is strong also on a line 90° of the main path. See Abb2

Abb2
Deutschlandsender (LW) and Berlin (MW) are used as Störsender and
"To be effected Tx" (gestörter Sender) and then the other way around. Both are not located that far apart. The Tx are marked "X"
The receivers are located across Germany and their symbol show how strong they hear the interfering modulation.
laut = loud
leise= a bit
nichts= nothing

Here you see that the area where the effect is noticed is quite large, and not limited to just a line, but also to its 90° axis.

Jurgen

730 CKAC Montreal QC. Lengthy FF speech, jingle and ID by YL, thenback to speech. Fair 23:15 29/11 JF
740 CHCM Marystown NL. VOCM ID and Christmas songs Fair 23:22 29/11 JF

Conditions not so good overnight. Monintored 1490 up to 06:15 then 1450 thereafter.

1490 had EE speech around 06:00 but no clues as to who this was. 1450 had WKXW but there appeared to be another oldies
station mixing.

Probably no chance to listen this evening/overnight as I will be home late. The 7030 is coming with me and it won't be
practical to set it up again on my mid-morning return.

Cheers all!

Yahoo group: skywavesmw
Date: 2005-12-02 08:39:30 UTC
From: Jurgen Bartels
Topic: 325 Message: 325

2300 - 0200

First time that 1510 WWZB was at good listening levels

On 1470 I first heard a spanish speaking talk station, later on a sports station with the slogan "ESPN Radio" from the US. I never got the ID.
Any ideas?

1630 WDHP VI came in good
1590, 1610 weak audio
1520 noticeable het, but channel is occupied by other europeans.

This morning 0800 very weak audio on 1470 and a few hets on serveral frequencies

Thus a better night despite the higher A index.
http://dxlc.com/solar/ reports poor reception. For me the past low A index days were worse.

Compared to past years, the reception is not really thrilling. Despite beverage I never heard 1500 WTOp or 930 CJYQ that used to be regurlars with my loop.

From: John Faulkner
Topic: 326 Message: 326

The following might be considered off-topic.

I don't know anybody who has as many problems with computers as I do. The most bizarre things happen.

For the last few days I have had problems posting to the Skywaves FM/TV and MW groups. The problems appear to be threefold, relating to Norton, Web-Mania and yahoo. I can now only post with the on-line posting form, which happily corrupts all my formatting.

Norton is a big problem as is Outlook, which I have just installed. I have always used Outlook Express before this. I changed because of Norton insisting I use Outlook. I am a firm believer in never changing or updating software unless I absolutely have to.

I cannot log in to any yahoo groups without using the secure login.

Some of my posts are going missing even outside yahoo.

I am almost thinking of deleting ALL my antivirus/antispam/anti pop-up/protection programmes. I know this would be frowned upon by everybody as I would then be liable to distributing all manner of viruses.

I absolutely DETEST computers and modern technology in general WITH A PASSION !

I threw my printer went out of the bedroom window last week (not the first one I've done this to). This PC may follow shortly.

Happy modern technologying!

I don't use *any* anti-xxx stuff. In fact I killed it when I got it on my new PC. Those are for people who don't know their business and click just on everything. Better use your common sense !! Why should Norton check what I am sending. I know what I do. I am not stupid! Norton just is in the way.

I have a firewall (came with my Fritz ISDN/DSL modem card from avm.de) that warns me of any unknown outgoing connection and blocks all unwanted incoming stuff. This is the greatest piece of software I have.

I use Pegasus as an emailer (pmail.com) It never opens any HTML mail on its own and never loads any embedded images etc. For each attachment you see the entire filename and you can control with what it should be opened if at all.
Since Pegasus is not that popular like outlook, attacks on it are seldom. I've never heard of any.

Instead of IE I use Opera 8,51. It is now free, has many advanced features and you can control what to show, there's no need for any external popup blocker. I really don't understand why others still use IE, it's just too unconfortable to work with. In Opera I always have turned off:
unwanted popups, GIF animation, Java, Plug-ins, cookies.
Only in cases when needed I turn the missing ones on briefly. In the few cases where Opera does not show a webpage I revert back to IE. But this is quite rare.
Also I do not click on unwanted email-attachments and don't download from suspicious web sites.
This method has been very succesful, I never had any problems with viruses etc.

> I threw my printer went out of the bedroom window last week (not the
> first one I've done this to). This PC may follow shortly.

Are you living near a dump site (below your bedroom window) ? :-)
There's no reason to throw yourself back to the stone aged times. Drink a cup of tea, and then apply common sense and modern technology (often free) to fix the leaks that others left over. Never use what the majority (MS) is using. Windows is save the applications are mostly the problem.

Outlook used (at least) to be the client for M$ Exchange Server as used in businesses.

If Outlook Express worked, why not contiinue with it. Or switch to Eudora, Pegasus or another non-M$ emailer.

Mark

Hi

the Loop was beamed to the Northeast this morning.

1470 North American station with talks, sounded like a Sports network.

1700 US station with Soul music, Chaka Khan style...

Last night heard Greece on 1512 khz after 2300 utc

This morning (0800) Asian music station from the UK on 1260.

Pat

Hi

definitely a sports station I'm hearing this morning on 1470 khz.
Could be WHBO Tampa as I'm beamed to the Southeastern USA nwo

cheers

Pat

Hi

I heard "LA's sports station" indeed but did not trust my ears as the thought of picking Los Angeles sounded absurd, I guess this is an East coast station relaying a programme originating from LA ?

CHEERS MY FRIENDS AND THANK YOU ALL FOR YOUR HELP

Pat

How does WHBO ID ? It is a ESPN station also. A few day I heard a "ESPN radio", too, but never caught its entire ID.
I also got at that time 1620 WDHP Frederiksted, so I think I heard WHBO.

From: John Faulkner
Topic: 338 Message: 340

It doesn't follow like that Jurgen. The regular station WLAM in Lewiston, Maine is due to go to ESPN sports anytime now and there have been several other EPN IDs noted on 1470 overnight by other DXers. Looks like WLAM may have switched though there is no official word on this yet.

John

Looks like my other message didn't get through ere today either.

620 CMGN R Rebelde, Colon. // 710. Mixing equal levels CKCM. Weak-fair 00:15 05/12 JF
640 CBN St Johns NL. Classical music and comment // others Fair 00:22 05/12 JF
700 WLW ID ?Seven Hundered WLW? heard in dicaussion Weak-Fair 00:12 05/12 JF
790 CMAQ R Reloj, Pinar del Rio. Pip! Time pips on the minute, mixing US stn. Weak 00:31 05/12 JF
790 WAXY South Miami FL. Sports. Full ID at top of hour Fair 05:00 05/12 JF

1130 had a second station talking under WBBR between 08:00 and 10:00. It was too weak to hear anything definite but it
was definitely English, not sure if sports related and I only heard the voice of a YL.

Fade-out 10:05. Carriers still detectable at 11:00.

From: John Faulkner
Topic: 348 Message: 348

1130 KWKH Shrevport LA. ?back in a moment ? KWKH? ID mixing with WBBR at 08:00. Presume this is what I heard later at 10:01 with
CBS News. Weak 08:00 07/12 JF

1130 KFAN Minneapolis MN. ?Sports Radio 11-30 The Fan?. Weak 07:27 07/12 JF

1390 WFBL Baltimore MD. ?Talk Radio 13-90 WFBL?. News under WEGP Weak 07:00 07/12 JF

==========

The band was VERY lively by late evening on the 6th and with TA carriers appearing around 19:00. Audio in to good levels by 21:00.
But by midnight things "seemed" to have calmed down with very little TA.

Very pleased with my catches on 1130 after sunrise!

Good DX!

349. 1390 soon to go ?

Yahoo group: skywavesmw
Date: 2005-12-08 01:29:18 UTC
From: Jurgen Bartels
Topic: 349 Message: 349

Just hearing another series of test tones of 1386 around 0100 (now). Probably for Radio 390. Does not look good, another empty channel about to go.

1390 WLAM and a Spanish talk station probably Venezuela

1470 Vibracion

1620 the last few days found an empty carrier, fair signal, perhaps a pirate, but will they leave it on for so long? It just blocks WDHP

The last days have not been spectacular, now it is a bit better

Hi Mark
I am getting really fed up with Yahoogroups and NTLworld.
My messages delivered to my inbox are reduced in number and some never
make it.
I now find on all groups to which I subscribe that messages are missing.
My settings always have been plain text, and in my experience settings
do not play a part in this but open to be proved wrong.
Awaiting NTL findings and I have sent a critical feedback reponse to
Yahoo to see if that wakes them up to do something about this problem of
mail vanishing into cyberspace or wherever they go.
See NTL now offering 10gbs-should make them vanish quicker then?

If that is true, then it's good ... plain text uses a lot less
bandwidth, and doesn't pose security hazards.

It does seem wierld I agree that emails are going missing,this has
also happened to me sending to yahoo ,I sent one to this group in html
a couple of days ago and I didn't recieve it back and it didn't appear
here.I'm wondering if yahoo or even the goverment are vetting emails
before they get sent to the group and if deemed a problem or something
they are staying on the isp's server or yahoo's server and being
stored or deleted before they get to the group in
question..considering that BT own yahoo maybe they are being routed by
their servers to yahoo and getting caught in anti spam or something
there due to the diff software programs talking to each other,
Just another couple of things that might have happened to missing emails.

359. BOG Phasing

Yahoo group: skywavesmw
Date: 2005-12-09 03:11:11 UTC
From: John Faulkner
Topic: 359 Message: 359

More aerial experiments last night. Ran out two x 200m bogs (beverage-on-the-ground), terminated both straight to earth with no
resistor. Had it not been -4 (according to the car) I would have set out longer wires and used termination resistors, but the
purpose of this experiment was to try beverage phasing so any *fine-tuning* was probably unnecessary.

Using my phaser box to tune and mix the two aerials, I tried two 200m parallel bogs, side-by-side and separated by only five metres,
then moved one so the two were 45 degrees apart. There was no noticable difference in nulling power when trying to co-phase in both
situations. Both gave fairly deep nulls though not as deep as when using the loop/longwire phasing at home.

Both bogs were fed with 50m of RG58 with RF chokes in-line to eliminate the QRM fro the car.

I would guess that any nulls would be deeper still if the beverages were better set up, each offering better nulls to the rear in
the first place.

I can't provide a fat log due to the short time spent listening and reception was not great either, but the following TA notes may
be of use.

690 English talk
700 WLW - V good!
710 strongest TA. WOR in pile-up
820 English talk
1150 English talk
1290 R Puerto Cabello (when using the SW bog on its own)
1390 Pile-up
1420 French talk

Many other "regulars" were also present at good or very god strengths (S9 -> S9+) The 50k NYC station were also v good - as was
1190 WLIB.

Good DX!

John

When you nulled, how much did you also reduce the wanted signal ?
To me it looks like (in your 1st setup) that you nulled the bog with itself.
Both should deliver the same amplitude and phase when so close together in
parallel

Somewhere on the net I found the recommendation to separate the antennas by 1/3
wavelength. You need a phase shift of both bogs so that you ideally increase
the wanted signal while reducing the unwanted. Or the wanted signal is not
received by the 2nd bog at all and thus cannot be nulled out.

Motivated by your comments I built my own phaser and it's interesting to play
with. But for TA it's not helpful, since my loop as the 2nd antenna is indoors
and picks up noise that is then added in the phaser. I tried it on 1520 that is
blocked by GRC and UK, cancelling out both is impossible. There are simply too
many Europeans everywhere, you in the UK / IRL are a lot better of, at least
much further away.

The phaser is fun to use when both antennas deliver two stations mixing each
other. After setting the phaser properly you just turn the 180°-switch and hear
the one or the other station crystal clear, it is amazing.

Last night signals were lousy. Please gim'me some A-indizes more ! :-)

Jurgen

362. RE: [skywavesmw] BOG Phasing

Yahoo group: skywavesmw

Topic: 359 Message: 362

When you nulled, how much did you also reduce the wanted signal ?
To me it looks like (in your 1st setup) that you nulled the bog with itself.
Both should deliver the same amplitude and phase when so close together in parallel

// I understand exactly what you are saying Jurgen - I had this concern myself. An American DXers told me he had achieved very good
results by using this configuration so I had to try it and complare it with the two at a 45 degree angle.

// I have also been told that the angle should not be too big anyway. 90 degrees *shouldn't* work so well.

// Someone tell me if I'm wrong here but, co-phasing a loop and longwire is the best way as the longwire is an *electrical* aerial
and the loop is *magnetic*, but the effect will not be so good if you co-phase two electrical aerials together. In order to achieve
this successfully they feedpoints of the two aerials should be, ideally, a whole wavelength apart.

// I would be interested to have some feedback on this.

Somewhere on the net I found the recommendation to separate the antennas by 1/3 wavelength. You need a phase shift of both bogs so that you ideally increase the wanted signal while reducing the unwanted. Or the wanted signal is not received by the 2nd bog at all and thus cannot be nulled out.

// Well, this is different again but this may well be right. As my point above.

Motivated by your comments I built my own phaser and it's interesting to play with. But for TA it's not helpful, since my loop as the 2nd antenna is indoors and picks up noise that is then added in the phaser. I tried it on 1520 that is blocked by GRC and UK, cancelling out both is impossible. There are simply too many Europeans everywhere, you in the UK / IRL are a lot better of, at least much further away.

The phaser is fun to use when both antennas deliver two stations mixing each other. After setting the phaser properly you just turn the 180?-switch and hear the one or the other station crystal clear, it is amazing.

// Comments received from a DXer in Canada ...

"I seem to remember my having one (beverage) grounded at the far end, one ungrounded, John. Might be worth a try next time.."

// Worth considering too perhaps.

Last night signals were lousy. Please gim'me some A-indizes more ! :-)

// The A/K indices have been very low for the last couple of nights but the conditions have not reflected this.

// I wrote to the MWC regarding someone's experiments with EWE aerials. I will paste a copy of my post ...

"Hi Paul,

I don't know if you have ever used a phased loop/longwire antenna system before but I wondered how the nulling capabilities might
compare to those of the EWE antenna.

I can eliminate my local Clipstone transmitter, which gives 50 over 9, with a bit of careful tweaking.

Nulling at night is more tricky as there can be more than one station to null which is not possible with the loop/longwire as this
may just eliminate one of the signals and leave others. Does the EWE produce more of a blanket reduction? Say, all signals from a
NE to SE direction?

How big is it? I might not be able to have one here in the available 30' x 30' space."

// Hope all that was easy to follow as I have quoted from more than one email.

Cheers

John

John do you still remember: When you nulled, how much did you also reduce the wanted signal ?

> // Someone tell me if I'm wrong here but, co-phasing a loop and
> longwire is the best way as the longwire is an *electrical* aerial and
> the loop is *magnetic*, but the effect will not be so good if you

Hmmh perhaps? But typically in far field condition the electrical & magnetic field is the same but perpendicular. In near field condition they behave differently. But both pick up different kind of noise from nearby (a few meters).

> co-phase two electrical aerials together. In order to achieve this
> successfully they feedpoints of the two aerials should be, ideally, a
> whole wavelength apart.

With n wavelengths apart you might see the same like with 0 wavelength. I would also not use half a wavelength but an odd fraction. So 1/3 or 2/3 might be right

> "I seem to remember my having one (beverage) grounded at the far end, one ungrounded,

It depends what direction the unwanted comes from, it's not always from behind. So, it may work well for his case but not for others. I guess a lot of personal experiments is needed to find your optimum.

A resistor at least consumes the reflected energy,

> // I wrote to the MWC regarding someone's experiments with EWE aerials. I will paste a copy of my post ...

Would be interesting to hear his comments.

365. Soundcard equalizer

Yahoo group: skywavesmw
Date: 2005-12-10 18:54:39 UTC
From: Jurgen Bartels
Topic: 365 Message: 365

I want to route the audio of my receiver through my PC and use the equalizer that comes with my soundcard (Nvidia nForce2) to reduce the effects of noise and splatter. But the equailzer does not work with direct sources like mic or line-in. It only works with the "wave" source, i.e. when playing back a wave file.
I guess they made it to prevent users complains of an additional audio delay.

So what I need is a program that takes the line-in and imediately writes it to the "wave" destination. Is anyone aware of such a thing?

I tried Realtime Equalizer RTEQ, but it does the equalizing itself and thus introduces a long delay (~ 5 sec), annoying when you tune the radio.
I suppose the DSP of the soundcard does it faster, but I can't get it to input from line-in.

366. fmdxITALY: 600 italian PI codes, 70 bandscan and automatic translation in english and french

Yahoo group: skywavesmw
Date: 2005-12-10 20:57:43 UTC
From: Fabrizio Carnevalini
Topic: 366 Message: 366

Ciao,
on fmdxITALY site http://www.fmdx.altervista.org/ is now possible to find the list of the Italian PI codes. So far they are about 600. It can be useful to all Dxers listening to Italian stations. Giampiero Bernardini got this from RDSDX Italian list. Some errors were found and corrected. It is a "fast" list with only the PI code, the name of the radio(s) and the region where the transmitters are located.

Then Leonardo Bolli activated a free automatic service of translation from Italian to English and French. We hope non Italian speaking FM Dxers will appreciate it.

And we are still going on working about the bandscans. Now you can find about 70 bandscans. They can help you also to understand what is possible to listen to in several cities and areas in Italy.

Fabrizio Carnevalini
Angera (Varese, Maggiore Lake, Italy)
OIRT &TV: Icom IC R-7000, 2 filter 53 kHz, Yagi 4 elements
FM: Grundig Satellit 500, 1 filter 80, 2 x 53 kHz, log pediodic 9 elements RKB

Very interesting to read !

Interview of Dr. Harold H. Beverage and H.O. Peterson

http://www.hard-core-dx.com/nordicdx/antenna/wire/beverage/interview1.html

Another development of interest was the first international broadcast of a program from the British Broadcasting Corporation from England. The BBC had a station at Daventry which broadcasted on a wavelength of about 1500 meters. A wave antenna was erected at Belfast, Maine for this wavelength, and the Daventry signals were relayed to Riverhead on the 100-meter transmitter and broadcast for the first time by WJZ in 1924

Date: 2005-12-17 13:41:01 UTC
From: John Faulkner
Topic: 379 Message: 379

740 CHCM Marystown NL. VOCM weather, etc. Fair 01:30
19/12 JF
740 ZYH206 R Super Alvorada, Rio Branco. TENTATIVE. Possible
ID slogans between songs mentioning Alvorada? Fair 01:38 19/12
JF
740 WIAC San Juan PR. Mention of Puerto Rico in Spanish and
Radio Felicidad ☐ the Puerto Rican on 1570? Weak 04:01 19/12
JF
740 XECAQ R Formula, Cancun. Positive IDs at toh and
references to Cancun. Fair 05:00 19/12 JF

Decided to record 740 overnight to see if I could hear anything of
WIAC. Much to my surprise this turned out to be a very lively
channel.

The logging of Radio Formula is definite. Many thanks to Henrik
Klemetz for listening to the recordings. Nothing concrete has been
identified of the other two Latins. Recordings are online if anybody
wants a listen but I guess the Brazilian and Puerto Rican may
have "got away". Is the call XECAQ correct?

http://www.skywaves.info/2005/740-0138-19-12-05-1.mp3 Probably R
Sociedade from Brazil though I wondered if this might just be R Super
Alvorada. There isn't much to go on here.

http://www.skywaves.info/2005/740-0401-19-12-05-1.mp3 Could be
WIAC. There is a mention of Puerto Rico and also I can hear a
reference to R Felicidad - a PR station on 1570.

http://www.skywaves.info/2005/740-0500-19-12-05-1.mp3 No question -
definitely XE.. R Formula, Mexico. The recording is distorted because
I didn't activate my auto AGC overnight and the signal came right up.
The IDs are clear enough though. An impressive signal!

Good DX!

Can anyone help me to id it?

Last night I heard a french speaking music station on 1630 playing a mix of pop and carribean style music.
They often anounce a phone-number and then followed by "Paris"
Their jingle sounds like "Super xxx"

In this 2-part clip you hear this jingle at the end of the 2nd part which is clearer.
http://xfer.3sdesign.de/Unid-MW1630-051219.mp3

It faded away around 0340 and then a weak US station showed up

This morning and last morning 1390 faded up at around 0730 and then vanished at 0800. It's interesting that the signal increased at that time while being weak the hours before.
Also this morning at 0700 many weak carrier hets were noted across the band, more than during the night. But Europenas blocked them all.

Thanks Renato.
Now that is surprising!

> Could it be an harmonic or something like that?

If it is, why did it slowly fade like TA reception?
Also I don't see how a harmonic can end up at 1620.
However my 180m antenna is pointing towards France.
(along a railway line)

The next time I will try to see if there's an audio delay.

Unfortunately their webpage doesn't say anything about frequencies

Last night it was not audible at all. Conditions were bad.
So that points in that direction.
I wrote them an email.

Yahoo group: skywavesmw
Date: 2005-12-21 12:16:14 UTC
From: John Faulkner
Topic: 394 Message: 394

1470 WNYY Ithaca NY. ID "Progressive Talk, 14-70 WNYY Ithaca". Promo: "Jerry Springer on the radio, weekdays 9pm to noon on your Air America Radio WNYY Ithaca". Equal levels WLAM. Fair 06:59 19/12 JF

1420 CKDY Digby NS. AVR country music network. AVR IDs. Mixing English talk station. Weak 07:15 22/12 JF

Quite an interesting night (22nd). Lots more north Americans across the band, including some very difficult channels. WBT Charlotte NC on 1110 for instance with talk - no IDs so not in the log but I suspect it could only be them.

1410 had two stations - another difficult channel.

1390 produced WFBL and WEGP at equal levels but also a music station. I'm pretty sure WISA has been here also the last few nights with *almost* convincing IDs, mentions of Puerto Rico, etc.

Listening to carriers here and there proved there were often more than one station on various frequencies.

Things are getting better again, at least for now.

Good DX!

Topic: 395 Message: 395

Regarding the recent problems a few of us have been having with posts, perhaps the end is in sight?

I am a member of the MWC e-list and went through the same posting problems with my messages to their group. They use Erefnet as opposed to Yahoo but many of my messages were marked "spam" and there was a period when most of my posts never arrived. The same was true for a few other members too. For the last few weeks I have had NO problems whatsoever with posts to them, albeit there has been the odd one marked as "spam".

This might offer a glimmer of hope to the those who have had problems posting here. Thankfully, our problems have only been experienced by a small number of members.

If I may suggest, posting from within the actual Yahoo page seems to (almost) guarantee the appearance of my messages.

Also, it might be a good idea to remove any headers/footers/signatures which might be seen as spam by Yahoo's/etc's spam checkers. Posting in plain text, as ugly as it is, would probably guarantee the successful arrival of your mail.

1510 comes here also, but not really strong
1520 as always burried as a het under UK & Spain stations
1470 Vibracion, fair
1390 WEGP very weak

Seems the good conditions held out overnight judging by reports elsewhere but I wasn't able to hear anything due to some local noise. Not heard this before so I hope it was a one off. Also the longwire is playing up yet again so no phasing overnight either.

EWE soon.

Well, that's not what you want.
Without ionosphere you would not hear a thing!

Here in central Germany reception wasn't that good, checked this morning and didn't hear a thing.
I am curious to see how reception 300km to north will be, I'll go there tomorrow

Happy Holidays to all of you.

403. Ashfield DX Log: 24-12-05

Yahoo group: skywavesmw
Date: 2005-12-24 12:21:11 UTC
From: John Faulkner
Topic: 403 Message: 403

890 WAMG Dedham MA. ESPN sports news. ID and local weather
at 08:03 after sports news, "cloudy and 38 degrees", then news
Fair 08:03 24/12 JF

980 UNID. Classical music, violin concerto. I
don't usually hear anything on this frequency. Weak 05:37 24/12 JF

1590 WAKR Akron OH. Christmas songs. "This is 15-90 WAKR"
Weak 05:31 24/12 JF

An interesting night. I'd love to know who was carrying classical
music on 980, especially if it was north American. The
conditions were certainly strongly towards north America.

Given the very quiet conditions I had expected better reception, but
it wasn't all disappointing. It was a night of few ID's
however.

1330 was the first channel I recorded. EE sports were heard up to
02:00 mixing with possible French language station - WRCA? I
moved to 890 after 02:00. Then to 1130 after 09:00. I've never
heard so many carriers on 1130, one or two wildly off channel.
1130 carried a serious talk station up to 10:00 but it did not sound
like WBBR.

Good DX!

Hi all,

living less than 100 metres from a nightclub can be a royal pain in
the arse at times! Last nights "Celebrations" made sure that I wasnt going to get any sleep until very late so I put the time to good use from 0330 to 0530 and after some shuteye from 0730 - 0930.

At 4 am KQWB / KXTR 1660 were both at good levels on the EWE so I took a chance and laid out the BOG taking care not to have any conversations with revellers.

A few firsts for me, KXTR was a thrill with a friend in Chicago playing it over skype to me so I could make sure thats what it was.
Many other stations were heard, all the regulars as well as probably XERF on 1570. I keep hearing a station on 740 in Spanish with dodgy audio any ideas anyone - also who has C2C on 810 and is there a station on 1680 that plays jazz???

Heres what was logged:

1700 KVNS Brownsville TX, "Newstalk 1700 KVNS the valleys place to talk" G 03:33
1660 KQWB West Fargo, North Dakota -"Talk Radio 1660" CNN news later Phil Hendrie show G 04:00
1300 WOOD Grand Rapids MI, mentions of malls in Grand Rapids, yl talk show F/G 04:15
1660 KXTR Kansas City, KS, dominant at times over KQWB w/classics - // US friend with skype G 04:30
1660 WCNZ Marco Island, FL, relevant radio id in mix. G 04:59
890 WAMG Dedham MA, references to Boston, ESPN id and ads. G 05:03
850 WFTL West Palm Beach, FL., over WEEI, "Newstalk WFTL" G 05:06
1680 WDSS Grand Rapids MI, radio Disney id. F 05:07
830 WCCO Minneapolis, MN, CBS news, id very weak later. F 08:02
790 WAXY Miami FL, sports talk. F 08:05
790 CMAQ R. Reloj, Pinar Del Ray, Cuba, morse id, ticking. Mixing WAXY F 08:05
1120 KMOX St. Louis MO, news and sports. VG 08:09
1540 KXEL Waterloo IA, midnight trucking network //

760 WJR, fair to good in USB F/G 08:12
810 CJVA Caraquet NB, "Superstation" id same level as
Scotland - last time heard on FM 2003!! F 08:19
810 Unid Coast to coast under BBC Scotland and CJVA W
08:19
750 WSB Atlanta GA, id under CGBY W 08:22
670 WSCR Chicago Illinois, "Sportstalk 670" brief
signal F 08:30
1590 WAKR Akron OH, id and oldies. G 08:55
820 WBAP Fort Worth TX, news and id. F 09:00
890 WLS Chicago Illinois, id and weather check. F/G
09:03
1550 CBE Windsor ON, talk about Russia. G 09:36

regards to all and best wishes for Christmas and the
New Year -

Your station on 740 could be Cancun, Mexico (XECAQ). Its audio sounds terrible. A few of us have heard it recently.

The 1680 *might* be WTTM NJ which has moved from Princeton to Trenton, changed format and plays all types of music. If you hear it again before 0400 UTC, email me and I'll check it for you.

411. TA in Northern Germany

Yahoo group: skywavesmw
Date: 2005-12-26 10:53:39 UTC
From: Jurgen Bartels
Topic: 411 Message: 411

as I am writing it is 1145 local time and I still hear WWKB 1520 with audio, not just a carrier!

Reception is immensely better here west of Bremerhaven than in central Germany. I arrived on the 24th and started listening at 2300 with a 1x1m loop and ride away heard 770 WABC WWZN 1510 and Vibracion very clearly.
Boy was I surprised when I awoke at 8:30 local and heard WABC without splatter, also WFAN 660. WWKB boomed in nicely without any splatter, and I thus so far thought I would never hear it again, because in central Germany it is blocked by two stations.
Then I set up a 300m beverage 310 degrees, it's about 3km distance to the northsea. The ground is marsh land soaking wet, water still stands on the surface. The first impression: signals were much weaker compared to central Germanz were the soil is sandy, so the wet ground deterioates signals a bit. But signals from UK / Scotland come in strong. Also it is very quiet, not much electrical noise. At night I noticed teh beverage performed much better than a loop that was directed in the same way.

times are German local time
930 CJYQ NF, "Radio Newfoundland"
1010 WINS 02:25
1010 CFRB 02:30
1500 WTOP 0:00
1510 WWZN
1520 WWKB
1560 WQEW "Radio Disney NY" 1560"
1700 WEUV Huntsville AL Gospel
1700 KVNS Brownsville TX "Newstalk 1700 KVNS" 01:30

in the morning
950 CKNB Campbellton, NB, 8:02:00 8:04 8:18 "95 KNB"
880 WCBS 8:30
870 WWL 8:32
1180 WHAM Talk 9:30
1200 WOAI "Fox sports radio network" 10:00
1030 WBZ Talk
1050 expected CHUM but heard ID "CFCM Radio" ?? 10:23
1130 WBBR
1280 Montreal ?
1430 Toronto ?
1520 WWKB

Lots other frequencies but not IDed yet.

It makes a huge difference to be located 300km northward and I suppose the vicinty of the Northsea plays an important role also.

Jurgen

Topic: 408 Message: 412

Iam interested to make a long range MW TX-
RX. Can any body help me to do this?

Hi and welcome to the Skywaves MW group.

If you check through the archive of messages there may be some messages which will offer the information and advice you are looking for. If not, please ask away here.

What equipment do you use already? Receiver / aerial?

A good communications receiver is useful, especially if it has narrow IF filters and good sensitivity. Portable receivers are less useful but can often produce a few DX surprises. A loop aerial is very useful for helping the nulling of unwanted signals which might be causing intereference to wanted stations. Any short longwire should also be able to bring good results.

For medium wave DX, the reception conditions are very important. These can change from day to day so DX stations are audible one day but not the next. Solar activity plays a big part on what we can hear on the medium wave.

It is important to listen at the appropriate time if you are wanting to receive certain countries or target areas. So you see a little background information would be useful. With this in mind, where do you live? Which areas of the world do you wish to hear?

We ought to have a page on our main website (http://www.skywaves.info/) to give information for new members on how to get started. This is all planned for the near future though.

We are a new group, only operating since October this year, but our FM and TV DX group has been in operation sice 1995.
http://uk.groups.yahoo.com/group/skywaves/ which may be of interest.

Please tell us a little more and I'm sure we can help.

Best wishes

John

Topic: 413 Message: 413

A correction to make with my logging of HIBA yesterday. Thanks to Renato and Andrea for correcting me. This was not 920 AM but R Nueva Esparta from Venesuela. It appears this is not the first time this mistake has been made with R Nueva Esparta as their ID is very similar in sound to "920 AM" from the Dominican Republic, at least to someone with limited knowledge of Spanish like myself. I actually heard "Nueva Esparta, nueve-veinte, a-eme, una, veinte minutos..."

So, my log is amended. Many thanks and good DX!

for 1570 the AM_CAN.XLS lists nothing.
CFAV I found in John's log. Where did you get it from?

Conditions lasted until 11:30 but stengths were much lower than yesterday.
at that time. I noted on 1530 yet another "ESPN sports radio", it took me a
while to figure out that it came from Keflavik, ISL and not from the US. At
12:00 it relayed NPR and had a time advance of a second compared to my local
AFN. Also in the NPR breaks Keflavik broadcast not the same as AFN.

The "ESPN sports radio" drives me mad, I find them on many spots and their ID
is often not helpful, just mentioning the frequency

930 WBEN Buffalo NY. "With cloudy skies and ? degrees in Buffalo. Good evening I'm ? ? on Newsradio 9-30 WBEN" then "WBEN Accuweather Forecast", mentioning wben.com. Equal levels CJYQ & CFBC most of the night with many ID's, Weak 01:00 27/12 JF

Conditions did not seem so lively tonight. Recorded 930 again which produced WBEN, dominant for much of the night. After 06:00 I went to 1190 which produced WLIB and a station playing non-stop classical music. After 09:00 I was on 1130 but this only produced only a weak WBBR.

Good DX!

418. Alaska in Europe ?

Yahoo group: skywavesmw
Date: 2005-12-27 21:25:16 UTC
From: Jurgen Bartels
Topic: 418 Message: 418

I am using free great-circle mapping program
http://tonnesoftware.com/pizza.html

When watching it in polar mode, you see that Alaska and northeast USA still lies in the dark while Germany already enteres the darkzone again. There should be a chance for a path to Alaska.
So I tuned accros and found a het on 650kHz (perhaps KENI Anchorage?), it was full of splatter from the BBC 648. So I phased it down, up came Bulgaria on 648, then at 1803 UTC I heard rock & roll oldies on 650, but no anouncements. Between the songs was always a short pause. The 1st het I heard at 1700 UTC, so east CAN & USA was still in daylight zone.

Wondering why there were no IDs I think, 650 could have been Greenland radio.

But anyways, have Alaskan stations ever been received in Europes mid latitudes? I read it works in northern Scandinavia.

Hi Jurgen,

This will probably be 'OM' from the Dab Duc Gorm A Platform in the North Sea, co-ordinates are: N55.3448 E004.4533. It been a good signal here whenever RTE 2 is off the air.

73 for now, Alan.

Yes, it does make sense! It's a triple ID.

What you heard was a long ID for 96.7 WXZO Willsboro(NY)-Burlington VT,
960 WEAV Plattsubrg and 96.3(...).

WEAV and WXZO simulcast. They also simulcast on 96.3 (which is probably
a translator in Keene Valley, NY, just west of Plattsburg) but that part
of the ID was garbled. I can't find any other 96.3s close by.

Nice audio clip!

740 ZHY446 R Sociedade da Bahia, Salvador. Many "Sociedade" IDs.
Excitable Portuguese OM Good 01:02 28/12 JF

I noticed the disturbances yesterday evening and decided to position my loop toward South America. The loop was rather noisy but the longwire remained relatively noise-free so I did all my listening on that. I wonder if the wealth of Christmas lights we have around here are responsible for the increased noise levels I have been having for the last couple of weeks. This has been apparent from 1400 upwards, but only a problem in the X band.

I listened to 930 around midnight but failed to identify the Spanish station mixing with CJYQ. Then I moved to 740 where R Sociedade was at GOOD levels. Portuguese was also heard on 710 and 790.

I recorded 1470 from 01:45 and 1590 from 07:45. 1470 was a mumble of very weak Latin activity with Vibracion heard, then WLAM popped up to weak but clear levels from 03:00. All 1470 activity had dipped down to 'barely audible' by 07:00. 1590 produced very weak Spanish and possibly a north american - far too weak for any certainty.

Disappointing.

Good DX!

1430 YVTP R Bahia, Puerto La Cruz. ID jingle, lively anns. Fair
03:01 29/12 JF
1430 WNEL Noti Uno, Caguas. "Noti Uno" ID after news Weak 05:03
29/12 JF

You've guessed it - 1430 was one of my chosen frequencies overnight. Then to 1590 again from 06:30. Two north Americans were heard on 1590 but both very weak, one slightly off frequency producing audio flutter, the dominant one having serious discussions. It sounded like WARV's Christian format but, like last night, signals were too weak to distinguish anything.

Good DX from a snow covered Sutton-in-Ashfield!

430. Super DSP receiver

Yahoo group: skywavesmw
Date: 2005-12-29 18:13:52 UTC
From: Julian Hardstone
Topic: 430 Message: 430

The DREAM receiver software includes a *fabulous* DSP facility for AM, SSB, CW & FM !

I have been playing with the software DRM receiver, and have managed to reduce the noise from my PC and its switch-mode PSU even further, so reception is
now reasonably quiet below 6 or 7MHz. Some of the strongest DRM transmissions, from eg Flevo, Juelich, Junglinster, Rampisham, are now just about listenable, if you can tolerate about 5 - 10% drop-outs, lasting from syllabes to minutes. It seems very vulnerable to impulse noise, and is fairly intolerant of QRM.

That said, I have, in the process, discovered that the DREAM receiver software includes a FABULOUS DSP facility for AM, SSB, CW & FM decoding.
Hardware modifications of your receiver are required, to
1) set the CIO (BFO) to approx 12kHz on one side or other of the IF centre freq
2) ensure the audio bandwidth for the line output is at least 25kHz
3) widen the IF bandwidth as far as possible - if the rx architecture has a high 1st IF (>30MHz) with a 'roofing' filter, that is all the filtering you need.

To decode the 12kHz signals, you need a typically fast modern PC running Windows or Linux, and preferably a separate soundcard, Soundblaster compatible, without ALC. The software can be downloaded for free,
(being an earlier version of DREAM which is no longer free), from
http://home.planet.nl/~rickvdw/digitaal/drm2.html
Sample DRM audio test files can be found on
http://www.drmrx.org/

The result is that you have fantastically sharp and infinitely variable filtering, with a spectrum display of the full rx hardware bandwidth. You can shift the DSP band to suit the signal spectrum. For AM signals, USB or LSB reception is synchronous, and, with the variable bandwidth, the audio quality can be very good. The processing latency is about 1 second, so the audio lags 1s behind
the analog audio.

My HF rx uses a roofing filter, and 1 or 2 selectable ceramic filters. Initial impressions are that the DSP filtering is superior to the hardware filters, and I am contemplating modifying the rx to switch out all the 455kHz filters when using DREAM. Of course, the DSP can do nothing about other rx deficiencies, including poor dynamic range and spurious responses. And, of course, it will only make sense if you can eliminate any noise from

your PC (see my Reducing Local Noise article in the Files section). Maybe a laptop running on batteries would be best?

- Julian

432. UNID (Mexican?) 1590

Yahoo group: skywavesmw
Date: 2005-12-30 12:16:04 UTC
From: John Faulkner
Topic: 432 Message: 432

I recorded 1590 overnight and heard two stations. They were both audible until around 05:00 and then the channel became empty.

The dominant station was in Spanish and gave an ID at 01:30 which sounded like "Radio Delicias". This would appear to tie in with XEBZ in Delicias. I have recorded a lot of speech from this station but I am not aware of any more IDs on the hour or half hour, despite the signal remaining present for another two or three hours.

I have uploaded two files ...

http://www.skywaves.info/2005/1590-unid-0230-30-12-05.mp3
which gives the ID at 10 seconds. (160k)

http://www.skywaves.info/2005/1590-unid-0231-30-12-05.mp3
which gives a lengthy part of the speech which followed. (1.1M)

There is a programme schedule of the Radio Delicias network at
http://www.grupoacir.com.mx/rednacional/consultacp.php?Submit=Editar&Ref=34&fkEstado=0&fkPerfil=0&fkEstacion=0&fkBanda=2&Siglas=&Frecuencia=&Keywords=

Can anybody help with this please? Keeping my fingers crossed on this one.

Good DX!

From: John Faulkner
Topic: 432 Message: 434

Thanks for the listen Andy.

1590 is right next to the strongest signal on the band here - the Clipstone transmitter of BBC R Nottingham, but I can lift this
right out with the phasing system. Any splatter you can hear on 1590 is coming from the Spanish stations on 1584. Looks like this
might be another 'one that got away'.

1590 is an interesting channel and several central/south American stations have been logged here in the UK, including Ciudad
Delicias on a Sheigra DXpedition in 1995. If anybody is interested, here is a list of all central/south Amerian stations logged on
1590 in the UK.

Cuba: CMDF R Progresso, Manzanillo
Mexico: XEVOZ R Reloj, Mexico City
XEBZ Ciudad Delicias, Delicias
Bolivia CP155 R Bermejo, Bermejo
Brazil ZYL368 Rede Dinamica de Communicacao, Uba
ZYL369R Guaicui, Varzea de Palma
Chile CB159 R Aconcagua, San Felipe
CD159 R Llanquihue, Llanquihue
Colombia HJIP Emisora Nuevo COntinente, Envigado
HJWB R Nuestra Senora del Socorro, Socorro
Ecuador HCAS2 R Record, La Libertad
Peru OAZ4Z R Agricultura, Lima
OCX6S R Mundo, Arequipa
Uruguay R Real, Colonia
Venezuela YVUD R Deporte 15-90, Caracas

The 'regulars', if you can call them that, are XEVOZ, OAZ4Z and CX159. Also, no less than 21 north Americans have been positively
identified on 1590 in the UK!

I will probably monitor this frequency again tonight.

Good DX!

John

That's a different type of religion, Jurgen. Mentions of "corazon de America" and above all of "... desde los estudios de Canal 48, en Honduras" seem to point at LV Evangelica de Honduras, which would be astounding at your clip's incredible level. BTW, were you listening in AM? I just gave your clip a distracted ear, to be sure I have to relisten a few times or ask for other friends' help. Time of reception is more than compatible, but a rebroadcast could not be ruled out completely.

Dear Mr. Jurgen. May be the next stations: FG (54? 52.2'N - 20? 31.2'E) or KR (54? 54.6'N - 20? 40.4'E), both from Kaliningrad (Russia).
There is a very good list of MW beacons available in this address:
http://www.beaconworld.org.uk/files/mwbeacons.pdf

I wish you and to all members of skywavesmw, a very happy new year 2006.

If you are looking for an extensive list of NDB (LW/MW beacons) please visit 'REU' website.
You won't find a better database (see URL below).

Regards and Happy New Year.

> astounding at your clip's incredible level.

Thanks Andy,
since it is religious, I found "Catholic Radio Stations in America's"
http://www.crtn.org/radio/region.php3?id=america%27s

There these VEN stations are listed:
Radio Fй y Alegrнa YVZB 1390 AM
Radio Lumen 2000 YVZA 1390 AM

so perhaps it was one of them? But I don't know at what time they would
broadcast those kind of programs and if they indeed broadcast them.
So a lot of speculation remains.

> BTW, were you listening in AM? I just gave your clip a distracted
> ear, to be sure I have to relisten a few times or ask for other
> friends' help. Time of reception is more than compatible, but a

Yes it was in AM, nothing special, bandwidth 4kHz

I"ll apreciate if you could find out more.

Happy New Year to all of you, with hopefully lot's of quiet magnetic fields.

> 1130 WBBR is another powerhouse

Here in Northern Germany those are the first ones to appear

950 CKNB Campbellton, NB, "95 KNB"
780 CFDR Dartmouth , NS "Kicks Country"

and don't forget 1510 Boston

930 used to be strong but is now quite weak, did they reduce power or are they using a directional antenna?

Hi Richard. A warm welcome to the group! :0)

Just to add to Tim's message. He is right about CJYQ, which isn't so good these days but it is still one of the more regular catches. 1400 CBG is an odd one here - it can thunder through sometimes but other days it is one of the less regular Newfies - even if north American conditions are good.

Personally, the more regular ones here are 1180 WHAM, 1510 WWZN & 1520 WKBW.

A lot has changed since 1973. There are still some of the old regulars on from those days but you will find a lot of the Canadian stations have moved to FM, switching off their MW transmitters. I'm sure you will also have noticed the terrible splatter we have to deal with these days, My phasing system redices this on many channels though.

The X band is also an odd one because the conditions rarely seem to tie in with those below 1600kHz.

Hope this is of use.

Good DX!

John

Just to get you up to date, WABC is on 770, WNEW was on 1130 but
replaced by WBBR (Bloomberg business radio).

Don't feel bad, though. It took me forever to get accustomed to the 9khz
spacing over there. Back in the 60s it was 9khz on lower mw and 8khz
upper mw (or something like that). I still get confused at times.

(BTW.. Jurgen...nice going on your WTIC 1080 log. I'm located 20 miles
north of them.)

The first logging of the new year!

1470 OAU4B CPN R, Lima. "CPN Radio" ID's at top of hour. News Fair 00:00
01/01 JF

The stroke of midnight here was spent listening to CPN R from Peru. I wanted to try and log something at the stroke of midnight new year's day, just for a change. Only three stations were audible from across the Atlantic at this time as conditions were far from good: CPN 1470, CJYQ 930 (fair) and an uidentified lively Latin American on 1590. Nothing else was heard on a quick scan. I monitored 1590 overnight but the Latin never got above the noise level.

Here's wishing everybody a happy and successful new year!

Good DX!

From: patrice.privat
Topic: 454 Message: 454

Hi

I struggled for 2 hours this morning to ID the US station on 1700 khz.
Signal gradually got stronger around 0700 utc and the peak took place about
local sunrise hee.
It was a national programme about 2006 predictions (how original !!) .There
was a "Doctor " on the line talking about earthquakes (how smart !!) .
There were commercials, one with a phone number starting 866.
The news at the top of the hour included the slogan "newsradio".
They did not sound local at all.
The station identification included "talk about it" and the city name ended
by "ville" which pretty much leaves us with Huntsville AL or Brownsville TX.
Antenna (ALA1530 Loop active) was beamed to Iceland.All other channel empy
(1510, 1470,1390,1660,1680)
Show resuming was introduced by Moroder's "midnight express theme" at 0605.
First minutes after 0700 Here Comes The Sun by G Harrisson .

I logged on to WEUP website (seems to be associated to WEUV but the live
stream was Gospel music which did not at all match what I had in my
receiver headphones).
Maybe WEUV and WEUP are 2 separate stations, one for Gospel and one for
preaching.

Any clues

Pat

Hi Pat.

This does sound like KVNS Brownsville TX. They are on a "newstalk" format and carry C2C (Coast To Coast" overnight with George Noory). WEUV Huntsville AL are all gospel.

Appalling conditions to say the indices have returned to "quiet". I recorded 1390 overnight and have not had time to check through the recording yet, but from a quick scan there were only the weakest signals from a small handful of north Americans: 1390 WEGP, 1470 WLAM and 1510 WWZN. Midwinter anomaly?

There was a Latin station on 1390 so hopefully I will ID that later. Much to do here.

Good DX!

John

458. Western Canada in Northern Germany this morning

Yahoo group: skywavesmw
Date: 2006-01-02 13:41:16 UTC
From: Jurgen Bartels
Topic: 458 Message: 458

What a morning !! (times in UTC)

1130 07:20 WBBR and another UNID often mentioned "CN radio"
1080 07:20 WTIC
1290 09:43 CFRW Winnipeg MB, Oldies back to back ID CFRW (2kHz)
1140 09:52 CHRB High River, AB religious, "Sunrise gospel hour of Calgary Alberta"
1060 10:01 CKMX Calgary AB "classic Country ... Calgary ..." ID commercials
1130 10:11 CKWX Vancouver,BC, "What the world is going on .... news radio 1130" TC 02:11 road conditions, weather 7700km
1410 10:23 tent CFUN Vancouver, BC

I spend a long time to figure out what the other station next to WBBR on 1130 was. Then I went to 1290 and was surprised to hear a strong het at 09:30, switching to 2kHz bandwidth there it was: Edmonton !!
Then I went back to 1140 and found a strong signal from nearby Calgary
Now I knew what was going on and checked other hets a bit closer. Unfortunately it was a race gaianst daylight, the path to Iceland was already in daylight. WBBR was already gone. Then I found CKWX Vancouver, perhaps this was the "other" station I tried to find earlier on? I don't know
The time was running out, heard a faint signal on 1410 tentativly CFUN, Vancouver.
There was no time to check Alaska. :-(

A godo indicator was AFRT in ISL on 1530, it came expceptionally well, also at 11:30

1390 YVZO R Lumen 2000, Maracaibo. "Lumen, las buenas noticias Weak 02:25 02/01 JF

1390 HRVC La Voz Evangelica, Tegucigalpa. Presumed. Religious songs, preaching, including many references to the Catholic faith Weak 03:19 02/01 JF

Recorded 1390 overnight.

I'm not 100% convinced by the possible ID from the presumed Honduras station, HRVC. There was over an hour of religious songs and religious speech, mentioning the catholic faith, but the ID http://www.skywaves.info/2005/1390-0319-02-01-06.mp3 is not that of LV Evangelica, more like "La Voz ... Catolica". Any opinions? I can't see what else this could have been other than HRVC. Again, it was very weak but I am pleased to see the back of the festive noise levels I've been having for the last couple of weeks. 1390 was incredibly quiet and signals were right down in the background noise level. It would be nice to bag HRVC as I have not heard this before.

Another Latin station was also present with lively rhythms - R Fe y Alegria is the usual suspect, along with a few brief / very weak appearances from WEGP.

Thanks and good DX!

I logged on to WEUP website (seems to be associated to WEUV but the live stream was Gospel music which did not at all match what I had in my receiver headphones).

I'll go with Brownsville KVNS Newstalk 1700.
KVNS BROWNSVILLE TX 8800 Day 880 Night NDA TALK EX-KQXX

WEUP skips up the coast real well, but it is always gospel music. I myself haven't heard KVNS but only two talk stations are listed on 1700 and KVNS does get out. I think you are on very solid ground logging KVNS.

462. 594 DRM

Yahoo group: skywavesmw
Date: 2006-01-02 20:46:04 UTC
From: Jurgen Bartels
Topic: 462 Message: 462

594 HRV - DRM - Hrvatski Radio 1/Glas Hrvatske, Deanovec (10)

Is this really only 10kW ?
Here at my location it is very strong so that it even blocks most of the time
even 594 D - HR-Skyline from Hoher Meissner (90) and
Rodgau-Frankfurt (250 kW)
And those are much closer to me. If they do manage to get thru, then it's
simply unlistenable.

Something is odd ?

HRV now spoils reception of 590 VOCM NF unless it gets very strong.
If this DRM goes on, then this low-sunspot-cycle will probably the last one we
may enjoy for TA reception.

Strange that it is strong for you, I cannot usually detect it. How is 1611 with you?
The problem for us DXers is that a DRM signal completely fills the 9kHz channel, unlike a typical AM signal. So, that's 9kHz of purest noise.
I have put a few pictures in the Files section, showing the spectrum of various signals, captured from the DREAM analogue detector utility. I have included typical DRM spectra.

1611 is a terrible pain, its very wide, when i'm doing spec lab monitoring on 1620 and 1611 DRM signs on it turns the screen white!

Subject: [skywavesmw] Re: 594 DRM

Strange that it is strong for you, I cannot usually detect it. How is 1611 with you?
The problem for us DXers is that a DRM signal completely fills the 9kHz channel, unlike a typical AM signal. So, that's 9kHz of purest noise.
I have put a few pictures in the Files section, showing the spectrum of various signals, captured from the DREAM analogue detector utility. I have included typical DRM spectra.

It is very strong and blocks everything. Even 1485 is bad, although the Tx are low poer and far away.

> The problem for us DXers is that a DRM signal completely fills the 9kHz
> channel, unlike a typical AM signal. So, that's 9kHz of purest noise.

Yes it fills out that bandwith 100%. Even when no audio, the noise stays the same, unlike AM where you then have the chance to listen to "the behind"
Even if it is weak, it raises the noise floor, so you may think your receiver is bad.

Last night X-Band was very strong, 1650 WHKT was unbelieveable strong, sound quality was simply great. On other channels were several stations simultanously, I suppose on 1700 were almost all, it was simply impossible to ID them one was just getting in the front of the others all the time.

This morning I noticed on 1665 RFI in french. I waited till 7:45 and heard an announcement of Antenne Saar (D) that it relayed RFI.
Antenne Saar, Heusweiler uses 1179, apparently a spur?

I always checked in between 1130 and 1000 to see when the west coast gets thru. 1130 was strong with WBBR, 1000 was empty. Only at 9:20 I noticed KOMO, for some reason it does not get thru earlier. I did not check 1130 since I concentrated the < 1000 kHz section. New Orleans and Louisville got thru. Til the end at about 10:45 the east coast where audible together with the west coast.
Q:
On 770 I heard "coast to coast AM". Does WABC carry this?

My Canada list has an error for 850 the call sign is "ABBOTSFORD 1", what is the real one for 850 in Abbotsford, BC ?

1700 00:30 WEUV Huntsville AL
1650 00:46 WHKT Portsmouth VA, "Radio Disney" very strong!
1690 00:50 WWAA Avondale Estates, GA Air America
1680 01:15 WDSS Ada MI "Radio Disney"
1700 01:25 ? "on WEE" alle Tx auf einmal
1700 01:35 KVNS Brownsville TX

morning
1140 07:05 CBI Sydney, NS, CBC News
1665 07:40 D Antenne Saar relaying RFI in french
950 08:30 CKNB and another UNID in the background
870 08:45 WWL New Orleans
790 08:55 CFNW "790 CFNW" country
840 09:06 WHAS Louisville, KY, ID, weather, coast to coast
880 09:10 WCBS NYC, weather heavy splatter from Wales
960 09:15 CHNS Oldies
1000 09:28 KOMO Seattle, WA, "KOMO 1000 news"
850 09:52 UNID, perhaps ABBOTSFORD 1, BC
770 10:10 "coast to coast AM"
1150 10:18 tent CJRC Gatineau, talk in french

This afternoon the carrier of 680 Alaska is again present, too weak to give audio.

Audio clip
KOMO from today http://xfer.3sdesign.de/1000-KOMO-050104.mp3

CKWX from 2,Jan http://xfer.3sdesign.de/1130-CKWX-050102.mp3
the 1st part with slogan recorded before it finally faded, the 2nd part was earlier on, and thus better audible

Jurgen - That is hard to explain. How about (2?1422)-1179 ?
Co-sited transmitters will usually radiate low level intermodulation products, but you would expect to hear some modulation from both programmes.

From: Jurgen Bartels
Topic: 403 Message: 472

Hi Paul,

> a few logs from this morning - mostly caught using the
> EWE.

How does the EWE compare to a beverage?
You had both so you be able to judge.
Directivity, sensitivity and F/B wise.

Which one would you prefer if had space enough?

Jurgen

Julian
someone told me this:
1422 + 2*(1422-1179) = 1665

But you are right you should hear the other modulation also.

Yes, that's a 5th-order intermod product, but the 3rd-order IP would be
much stronger.
I'm surprised if you can hear IP's from Saarland at such a distance!
```

Hi Jurgen,

of course if I had space I would have three or four 500 metre beverages! - but I have to say that an EWE gives almost similar results as far as I can see to a 150 m bog.

In fact I think the EWE is a little more directional.

The one I am using is 5 x 12 metres terminated with a 1000 ohm resistor and it seems to work quite well. I have not done too many tests changing the resistor but I can see a front back null of at least 20-25 db, with a little tweaking I guess this could be improved slightly. The f/b i would say is better on the EWE than the bog which is terminated with 470 ohms (although this might need to be lower - I have seen figures of 200 ohms quoted for bog's).

On 1530 for example I have nothing from England to my east and can hear AFRTS from Iceland in the clear more or less all the time - even hearing WCKY below it at times.

Alas my location is very noisy and my garden very small so the EWE is installed in the only place it can be - along my fence which runs east west. I feed it through a noise nuller made by Graham Maynard to kill most of my local noise, but after dawn my 2-3 db of noise is greatly effecting the possibilities of this great little antenna. A closer look at how to combat this noise is needed.

At some point I am going to take a chance and try and install one outside my property in some trees, only feeding it late at night or very early in the morning when few people are around..

In a perfectly quiet environment I think that EWE's would work extremely well. I would love to hear if anyone has one aligned for the west coast of Canada / US.

Also If anyone has any tips on killing noise id be greatly interested.

regards for now

Paul Logan,
Lisnaskea, N. Ireland.

477. X-Band & Alaska observations

Yahoo group: skywavesmw
Date: 2006-01-06 20:30:28 UTC
From: Jurgen Bartels
Topic: 477 Message: 477

Last night I checked when the first signals would be audible from

Canada
20:35 930 NF
20:50 780 NS, 950 NB

USA
21:10 1510 Boston, 1520 Buffalo

The grayline had not yet arrive there but was close by.

Now I continued on the X-band, because it is free of interference here, and I made a surprising observation.

All the stations came in one after the other as the grayline got close to them. But surpringly, those that just came in were audible the best for and hour or two. Later on some of them became difficult to receive.
For example I never managed to get WWRU before, only yesterday I got it by using this scheme. To the contrary, WHKT (not that far away from WWRU) stays typically long into the night with a decent signal.
The X-band does indeed has some interesting properties

I am a bit puzzled about 1680 WTTM. Instead of South Asian music, I heard Latin American music, WLAA from FL was still far away from the grayline.

1650 21:15 WHKT Portsmouth VA
1660 21:30 WWRU Jersey City NJ, in korean
1680 21:35 ? WTTM Princeton NJ, latin american music, sun not yet set in FL for WLAA Winter Garden
1690 21:59 WPTX Lexington Park MD, News, at top of hour pirate went on top
1640 23:13 WTNI Biloxi MS, news, "Talk Radio 1640"
1700 00:00 KVNS

Although Canada came in early, later on all of them were gone, New England & Washington area were decent. This morning all was gone only weak 1510 and 1520, 1390, 1470 were left over. 1510 faded away at around 09:00
Didn't hear anything from Latin America.

The last few days I monitored 680 KBRW Alaska. Every afternoon I see their carrier showing up 14:00 - 17:00, even today but weaker since A-index went up. In the unattended recordings I found traces of their audio as soon as the mush of splatter of 675 stopped for brief moments like during the time-pips.

Yesterday I used my 1x1m tuned loop that I directed toward Alaska, the BOG points 310 degrees (Phoenix). Perhaps with a BOG pointed to Alaska it should be possible.

The next time I intend to put up another 300 metre BOG. What is the recommended difference in azimuth angle? I still have not figured out how wide the main lobe is, does someone know more about it?

Also interesting
The path to US passes Iceland. AFRTS is on 1530, also UK Huddersfield and Cotheridge (Worcester) are on 1530. The UK stations dominate throughout the morning. Only after 10:00 they fade away, when the grayline is in the middle between Schottland and Iceland. The path England-Germany gets well attenuatied but Iceland - Germany is still intact. An hour or two later AFRTS is gone, in the afternoon it has no chance to come back, as the UK is stronger then.

From: Jurgen Bartels
Topic: 403 Message: 478

Hi Paul,

> of course if I had space I would have three or four
> 500 metre beverages! - but I have to say that an EWE

I made mine 300m, because a graph showed that the F/B goes down when it gets longer than 1/1 wavelength. And I chose 1000 kHz as the frequency. But the best F/B I achieve with the arrival of daylight in the morning, that beats just everything. Night DX is not that exciting with the exception of X-band

> than the bog which is terminated with 470 ohms (
> although this might need to be lower - I have seen
> figures of 200 ohms quoted for bog's).

I use 560 ohms and tried to adjust it, unfortunately my testclip cable broke during the procedure and I aborted it, it was also too cold, could not move my fingers anymore. But I noticed 560 was already pretty good. 200 would have been too low. I also have the impression that the R should be changed with frequency, at some frequencies it seems the F/B is bad, but I'm not 100% sure.

> On 1530 for example I have nothing from England to my
> east and can hear AFRTS from Iceland in the clear more

I only get it 10:00 - 11:30, see my separate email

> through a noise nuller made by Graham Maynard to kill

How does it do that?

> In a perfectly quiet environment I think that EWE's
> would work extremely well. I would love to hear if
> anyone has one aligned for the west coast of Canada /
> US.

I have the space here at my parents house, but will go home sunday. I wished I had more time to play with a EWE to see how it compares to my 300m BOG. Also it is very quiet here, the ideal playground.

Jurgen

479. Re: EWE / Beverage

Yahoo group: skywavesmw
Date: 2006-01-07 00:21:30 UTC
From: Julian Hardstone
Topic: 403 Message: 479

What do you use for the sense antenna with the noise nuller, and where is it in relation to the EWE?
Re the local noise, have you checked that it is not coming from the sense aerial? I expect you have, but it's worth mentioning.
The starting point for dealing with local QRM is to check what is coming from the main antenna with the feeder disconnected. Take the rx into the garden running on batteries, use a local earth rod adjacent to the antenna, completely disconnect the feeder cable, and connect the antenna and earth directly to the rx.
If the noise level is lower than when the rx is indoors, you can start looking for ways to reduce the pickup, principally by adding isolating transformers or chokes into the feeder cable, and improving the earthing.
But if the noise is as bad, you can look for any sources in your own home.
For the ultimate check, switch off the mains at the distribution board! If it seems to be from next door, well, good luck.
Hope to hear how you get on - Julian

486. background noise during geogmagn. disturbance

Yahoo group: skywavesmw
Date: 2006-01-12 00:30:04 UTC
From: Jurgen Bartels
Topic: 486 Message: 486

On 6-Jan at 00:00 I listened to 1680, this was very interesting. Due to the geomagnetic disturbance you could hear the background noise fluctuating with the disturbance. Occasionly traces of audio of the US Tx made it through. I suppose the longer the path got established the louder the noise became.
You could in fact "hear" the ionosphere swinging, it was quite impressive. I never heard it before. Some of you probably may have experienced this, but for those who have not, listen to the "soft noise" in this clip. The sparkle noise in the foreground is local.
http://xfer.3sdesign.de/BackgroundNoise-1680.mp3

Sunday I dismantled the antenna and drove home. The good times are over. :-(

Jurgen

Did you see this
http://dxlc.com/solar/ writes:
During the afternoon and early evening on January 10 propagation was very good to Alaska and the northernmost parts of Canada.

Try Alaska in the afternoon, while in North Germany I often saw a carrier on 680, when the heavy splatter stopped briefly I heard traces of audio. You should be much better off.

In North Scotland Honolulu has been received around 11:00 !!

Subject: [AuroraWatch] AuroraWatch News

AuroraWatch to appear on TV!

Recently members of the AuroraWatch team were interviewed by Channel 4 who were filming a new series called "The 100 Hottest Web Searches 2005". One of the hottest searches was for aurora borealis, so to find out more a film crew visited Lancaster. The series is being shown 11:35AM - 12:30PM Monday to Friday next week, starting Monday 16th January. We think AuroraWatch will appear in Tuesday's programme. We'd like to thank those subscribers who allowed us to use their aurora photographs.

Other news

AuroraWatch now features a sightings database where subscribers can report sightings of aurora. If you're uncertain whether something you saw recently might have been aurora check out the new activity plot archive.

Solar activity is approaching the minimum in its 11 year cycle. This means it is less likely (but not impossible) that aurora will be seen from the UK. Solar activity should start to increase again in 2007/8. Should anything happen AuroraWatch is ready to send alerts.

This email has been sent by the AuroraWatch mailing list.

Hi David,

If you heard an ID of "Talkradio 16-60" you will probably be hearing KQWB Fargo ND. Nice catch if so! If sportstalk then maybe WFNA Charlotte NC or one of two others.

Try 1540 now if you can - I have KXEL on the frequency which is also a newstalk format. (originally posted at 10am, reposting on site at 10:29)

Cheers

John

494. Ashfield DX Log: 13-01-06

Yahoo group: skywavesmw
Date: 2006-01-13 14:09:52 UTC
From: John Faulkner
Topic: 494 Message: 494

1540 KXEL Waterloo IA. 2 IDs. "Cloudy skies and scattered flurries at Newstalk 15-40 KXEL" and promo for a show not listed on their website. Another "Newstalk 15-40 KXEL" ID Weak 09:06 13/01 JF

==========

First time here for KXEL. :0)

I recorded 1490 overnight but only heard brief snippets of audio: some speech oldies. Come 10:00, virtually all the east coasters had gone. Even WBBR 1130 had left the channel - not even a carrier! At this time things started to get a little more interesting with 1140 producing a good carrier and weak audio. I checked 1250 and 1660 following Paul's DX alerts but only heard a carrier on 1250 and v v weak speech on 1660.

After arriving back from Cyprus / Manchester airport during the wee small hours of Thursday morning I managed a quick tune around the MW dial and heard rock/oldies on 1630 which I presume was KCJJ Iowa City IA and sportstalk on 1650 - probably KCNZ Cedar Falls IA. I ID'd these two a few weeks ago for the first time from home, but with KXEL now in the bag that adds up to three Iowans this season!

Conditions are forecast to stay quiet until the 15th, then active intervals are possible.

I intended to construct the EWE this afternoon but I still feel too sluggish to bother after my return from the holiday. Everything is hard work at the moment. Zzzzzzzzzz!

Good DX!

Hi all,

fantastic conditions continue - a few logs here - not on the list 670,1000,1160 Chicago and others like 830 WCCO Minneapolis, 1280 WNAM Neenah WI. I only log a station once per month :)

1250 from Manitoba was a very welcome signal with a great id recorded. Also very probably had CFRW Winnipeg on 1290, but didnt click with me until a few hours later, then remembered the oldies station quite strong that was dominant for a while after 9 am. KQWB was still weak on 1660 at 11 am.

For a while this morning I was using the EWE exclusively and I have to say it was working brilliantly pulling in almost everything that the 90m bog could. It was also pulling out a few that the bog couldnt. Null on the EWE is better than the bog - dont think I have the end termination right.

Next project is a KAZ loop-the 10 x 40feet version - cant wait to see what way it'll work out.

John congrats on KXEL I had it the other day for the first time and was over the moon. Have some great recordings from the last days but my soundcard has died so will get them online when that gets sorted out.

Anyway heres the logs:

670 CMBA Radio Rebelde, Arroyo Arenas, om in talk // 5025 mix with Chicago. F 05:55
1140 CBI Sydney NS, CBC News. G 06:03

My KXEL recording is at
http://www.skywaves.info/2006/1540-kxel-0906-13-01-06.mp3

The signal was almost to fair levels but sounds worse due to the mush and electronic crud I was getting across the band this morning, Not heard this noise before but 1540 was not too badly affected. Many other channels were impossible.

I am envious of WCCO and WHO Paul. Had WHO many years ago but these days 830 and 1040 are virtually inaccessible for DXing due to splatter.

KQWB is on my list of wants. Maybe I'll get another chance tonight. Never heard North Dakota. Wisconsin and Illinois have eluded me so far this season too - apart from two X banders WKSH and WYLL. Still there are several more common stations which I haven't ID'd this season, like 770 WABC & 1020 KDKA Pittsburgh, for instance.

TARGETS
While this might be tempting fate I will attempt the following list of "wants from home" for the remainder of the season.

790 CFCW Camrose AB
850 KOA Denver CO
920 CFRY Portage le Prairie MB
1130 CKWX Vancouver BC
1470 CJVB Vancouver BC
1630 KRND Cheyenne WY
1660 KQWB Fargo ND
1670 KHPY Moreno Valley CA
1680 WDSS Ada MI

I have not heard any of the above from home but I suspect the X banders will be the easier ones to go for.

I doubt I will be heading west to the Lleyn this winter following my trip to Cyprus. Not so much free time available now. Such a shame as the conditions seem interesting at the moment.

Good DX!

John

That's surprising, I heard WABC several times, mostly along WFAN
At your place that should be kind of local?

> TARGETS
> 1130 CKWX Vancouver BC
> 1470 CJVB Vancouver BC

How about CFUN 1410 and KOMO-1000?

> 1630 KRND Cheyenne WY
> 1660 KQWB Fargo ND
> 1670 KHPY Moreno Valley CA
> 1680 WDSS Ada MI

Try them before before their local sunset, that is the highest chance
Although I heard KQWB at 6:30 on 3.Jan

Jurgen

That's surprising, I heard WABC several times, mostly along WFAN
At your place that should be kind of local?

I have heard what I presume to be WABC and KDKA but I don't log anything until I have proof, an ID, etc., just in case 770 is KKOB Albuquerque and 1020 is KTNQ Los Angeles.!!! ;0) (I wish!)

770 and 1020 are splattered to bits here.

From: John Faulkner
Topic: 506 Message: 506

1470 WNYY Ithaca NY. "WNYY Information . " ID before toh Weak 07:00 14/01
JF
1470 WMBD Peoria IL, presumed with Coast To Coast, generally dominating WLAM /
WNYY between
07:00 to 07:30 Weak 07:15 14/01 JF
1660 KQWB Fargo ND. "Dragon Sports Radio, Talkradio 16-60 AM, KQWB West
Fargo, Fargo,
Moorhead and around the world on the internet at
www.dragonradio.org"
First heard at 01:20 Weak 02:00 14/01 JF
1660 KXTR Kansas City KS, Presumed with classical music behind KQWB for ten
minutes.
Slightly low in frequency too. No ID at top of hour Weak 03:40
14/01 JF
1660 KTIQ Merced CA. Tentative partial ID "Cadena Radio ..." I have heard a
recording
of the ID via the dxing.info x band page, which should say "La
Cadena Radio Visa".
V weak 04:04 14/01 JF

Another interesting morning, but with a rather early fade-out at 08:00.
Carriers were present beyond this but only WBBR was heard with very weak audio
up to 10:00. There is a problem with noise once again which is the likely cause
of the apparent fade-outs. The noise is a "mush" and peaks about S5.

Recordings available:

KQWB http://www.skywaves.info/2006/1660-kqwb-0200-14-01-06.mp3
KTIQ http://www.skywaves.info/2006/1660-unid-0404-14-01-06.mp3

After hearing the ID via the dxing.info page
http://www.dxing.info/audio/usa/1660_KTIQ.mp3 I noted the "Cadena Radio" part on
my recording, but the signal was quite weak at the time and buried in the noise.
Perhaps someone would like to have a listen to this and see if they can hear any
more.

Good DX!

You really need to spend a few hundred pounds to get a decent general communications receiver cush as the JRC NRD545 or AOR AR7030 or one of the Drakes if you can afford them, but there are plenty of other receivers worth considering too. I could contradict myself and say that you don't need to have expensive and elaborate receivers as you will be able to hear reasonable DX on relatively simple equipment, but you will probably need to wait for very good conditions and then only be able to drag in the more common signals. If you want to go for the more exotic catches then you need the good sensitivity and selectivity provided by a well-designed receiver and a good antenna.

I would relish the opportunity to DX MW from your part of the world Mark. You are well situated for good transatlantic DX. DXers have been amazed at the TA DX that can be heard on MW in Devon and Cornwall. MW DX is very challenging.

Why not look around for something like an HF150, or better still HF225 Europa? I don't know how many people still use the old valve radios but they could get you started nicely if they can still be found.

Personally, I would say that, more than anything else, you need good selectivity and a good directional antenna system like an EWE or phasing system. Don't worry so much about the sensitivity.

Anybody else?

John

Talk Radio 1660 was really loud here at least 30db above my noise floor and was only using my 66ft vertical wound on 45ft pole (plenty radials). It was q5 between 0600-0800 then faded rapidly
Was still receiving spectrum traces at 1100 on 1470. 1250 I cud hr the classical but was getting hammered by stronger pop music station.

1540 KXEL Waterloo IA. 2 IDs. "Cloudy skies and scattered flurries at Newstalk 15-40 KXEL" and promo for a show not listed on their website. Another "Newstalk 15-40 KXEL" ID Weak 09:06 13/01 JF

==========

First time here for KXEL. :0)

I recorded 1490 overnight but only heard brief snippets of audio: some speech oldies. Come 10:00, virtually all the east coasters had gone. Even WBBR 1130 had left the channel - not even a carrier! At this time things started to get a little more interesting with 1140 producing a good carrier and weak audio. I checked 1250 and 1660 following Paul's DX alerts but only heard a carrier on 1250 and v v weak speech on 1660.

After arriving back from Cyprus / Manchester airport during the wee small hours of Thursday morning I managed a quick tune around the MW dial and heard rock/oldies on 1630 which I presume was KCJJ Iowa City IA and sportstalk on 1650 - probably KCNZ Cedar Falls IA. I ID'd these two a few weeks ago for the first time from home, but with KXEL now in the bag that adds up to three Iowans this season!

Conditions are forecast to stay quiet until the 15th, then active intervals are possible.

I intended to construct the EWE this afternoon but I still feel too sluggish to bother after my return from the holiday. Everything is hard work at the moment. Zzzzzzzzz!

Good DX!

From: Julian Hardstone
Topic: 430 Message: 509

In the DREAM receiver, the 'save audio' function may be of interest to DXers who want to save audio of dx. This generates CD-format wav files, with a dialogue box for selecting a filename each time you hit the button. I forgot to mention this when describing the DREAM virtual receiver.

>> I have... discovered that the DREAM receiver software includes a FABULOUS DSP facility for AM, SSB, CW & FM decoding. (snip) The software can be downloaded for free,
(being an earlier version of DREAM which is no longer free), from http://home.planet.nl/~rickvdw/digitaal/drm2.html

The result is that you have fantastically sharp and infinitely variable filtering, with a spectrum display of the full rx hardware bandwidth. You can shift the DSP band to suit the signal spectrum. For AM signals, USB or LSB reception is synchronous, and, with the variable bandwidth, the audio quality can be very good. <<

Julian,
how does it peform under real DX conditions (TA), is it as sensitive and noise-free as the built-in demodulator? Or does it only work decently with stronger signals. i.e. does it make sense to use it during TA DX?

Jurgen

511. Re: Super DSP receiver

Yahoo group: skywavesmw
Date: 2006-01-14 22:12:31 UTC
From: Julian Hardstone
Topic: 430 Message: 511

Jurgen - It is well worth using. The filtering is almost certainly an improvement on all but the best analogue filters, and synchronous SSB is valuable if your rx does not have it. It's a big improvement on my HF-125, and it's lovely to have a spectrum display of the adjacent channels.

I'd like to hear some other opinions. You need some hardware modifications, perhaps we should discuss these off-list.
- Julian

512. Conditions this morning / A Dx'ers Trials.

Yahoo group: skywavesmw
Date: 2006-01-14 22:26:23 UTC
From: Paul Logan
Topic: 430 Message: 512

Hi all,

tiredness caught up with me last night and have to say most of the listening I did was almost on auto pilot!. Not too much logged but the usuals of the last nights were there: KQWB,WHO, WCCO, KMOX, WHBY, WMVP, WLS, WJR, WBBM, WYLL, WWVA etc.

Also caught two presumed daytimers around 9 last night one on 760, probably WVNE Leicester MA and tentative WFIF Milford CT on 1500, both were putting in surprisingly good signals on a new north west aligned EWE. Theres the outside chance that 1500 was Detroit but its a big outside chance I feel.

And then this morning I at last got an id out of CFRW Winnipeg MB on 1290 which was audible for ages playing oldies at good levels with no id forthcoming. Caught a sung then spoken callsign around 09:28. At this time 1250 had classical music so probably CHSM again.

At 9:03 two stations were heard with same news on 920 probably CJCH and CKNX but tantalisingly in the mix was a country station - perhaps Portage La Prairie - but no clues other than the C+W music.

And about 9:45 everything went a bit quiet. So I thought conditions had dropped out and went out to roll up the bog - only to find 2/3's of it gone. Some helpful person in the frozen playing field had no doubt found it an affront and decided to remove it!. I cant for the life of me work out why they would bother lifting an almost invisible wire out of a frozen field at 9:45 am.

I guess the thing to do is not be discouraged and find some way of making the thing even less obvious. Any ideas anyone?.

regards

Paul Logan

The same when I got it on 2.Jan, back to back music until the sung ID showed up. I am now listening to their webcast on
http://www.cfrw.ca/modules.php?name=Listen
and after each song an announcement & ID, well it is their local afternoon.
Nice that many Canadian do webcast unlike the US

> I guess the thing to do is not be discouraged and find
> some way of making the thing even less obvious. Any

Sorry no idea, but it makes me wonder, why do they pick up that stuff, normally people are lazy and hope: "let the others pick it up"
Perhaps put some dog-poop on the wire, that may deter them?

Jurgen

514. 1300 US Mystery station. Calling Mike Bugaj.

Yahoo group: skywavesmw

From: Paul Logan
Topic: 506 Message: 514

Hi all,

I've had a station on 1300 the last couple of mornings mixing with WOOD, all detective work has so far come up with nothing.So wondering can anyone throw any light on it.

It runs the "Point of view" talk show and has USA radio network news on the hour. Heard time pips on the hour this morning at 9 utc but no toth id.

Any ideas anyone??.

To Mike in CT perhaps you could throw this one out on your AM group and see if it comes up with anything - pretty sure it isnt WERE.

regards

Paul Logan,
Lisnaskea, N. Ireland.

I just did, Paul. We will see what happens. My first impression from your program details is that it's a religious talk station. Point of View is a kind of conservative/religious talk program.

Love your loggings Paul ! -Mike

I have uploaded a couple of audio clips to our 'files' section, demonstrating the audio filtering of the DREAM receiver DSP filtering in AM and SSB modes. This shows the effect of switching the receiver bandwidth in 1kHz steps, while listening to WWZN around midnight in Manchester UK
skywavesmw/files/DREAM/

517. A new internat. LW-MW-SW PHP based forum is planned to start in February 2006

Yahoo group: skywavesmw
Date: 2006-01-15 06:00:39 UTC
From: Björn
Topic: 517 Message: 517

Hi everyone,

a great new year 2006 to you all !

Several DXers and SWLs from a German radioforum group

http://forum.mysnip.de/index.php?20037

have been discussing about creating a new special forum within the same Mysnip.de platform. The forum software which is contained within Mysnip works very well, directly posting images or linking many audio files is no problem at all.

Till now all of the radio and DX forums on Mysnip were concentrating on FM-TV and satellite media.

This new PHP based forum that is scheduled to start on 1st February 2006 will offer a new wider discussion and information platform for just about any subject about AM or DRM broadcasting and DXing between 0-30 MHz. DXing on SW and MW, NDB, Utility DX will be featured as well.

In the newly planned LW-MW-SW forum you will find a direct link to many other interesting websites and to MW Scan, a very useful application by Peer Axel Kroeske DL2LBP and Günter Lorenz:

http://mwscan.de/

MW Scan is able to generate an automatic MW scan from any location in the world with ease !

This newly planned forum is supossed to be an international one, so anyone can post in English or even several other languages such as French or Spanish. The main language will be English, the same applies for the navigation tools (which are mostly in German, but can be changed to English).

The forum will be open to a larger public, only posting a message will need registration, any other visitor can read without having to register. It will be open to everyone !

Every new subject will nicely be kept in its own separate frame, so that it will always be very easy to find and navigating between all of it is much easier and quicker to use that with most other forum software. the Mysnip software also has a very good search function.

A similar AM-DX or LW-MW-SW forum with this kind of great software has been missing up till now, often LW-MW-SW DX groups are still using

closed non public mailinglists (rather more complicated to overlook and not easily accesible to everybody).

Best regards and good DX from Germany

Björn

518. Huge signals from north America on MW a few mornings ago here in Germany !

Yahoo group: skywavesmw
Date: 2006-01-15 06:18:17 UTC
From: Björn
Topic: 518 Message: 518

Hi everyone,

during one morning a few days ago (I don't know anymore if it was Friday or Thursday morning though) the signals on MW from North America were amazing here !

Using the special amplified antenna tuning trick on the Degen DE 1103 combined with a 2.1 kHz AM filter (retrieved from a Sangean ATS 803A).

Just a simple portable radio set such as the Degen DE 1103 offered big signals from such stations as:

660 USA WFAN - New York City, NY - Talk 0=2

770 USA WABC - New York City, NY - 0=2

850 USA WEEI - Boston, Massachusetts - 0=2

880 USA WCBS - New York City, NY - News 0=2

950 CAN CHER - Sydney, Nova Scotia 0=2

1130 USA WBBR - New Jersey Meadows, New Jersey - Bloomberg Radio program 0=2

1290 USA tent WDZY - Colonial Heights, Virginia 0=2-3

1320 CAN or USA Unid Station 0=2

1380 USA WMYF - Portsmouth, New Hampshire - Oldies 0=2

1390 WEGP - Presque Isle, Maine - 0=3-4 (Big signal !)

1390 USA WPLM - Plymouth, Massachusetts - Oldies 0=2

1400 CAN CBG - Gander, Newfoundland - CBC News 0=2-3

1410 USA WPOP - Hartford Conneticut - talk 0=2

1420 CAN or USA Unid Station 0=2 (Splatter from 1422 kHz Heusweiler)

1470 WLAM - Lewiston, Maine - Commercial, ESPN Sports Radio 0=3-4

1480 USA or PTR 2 Unid Stations 0=2-3

1490 USA WBAE - Portland, Maine 0=3

1500 USA USA WTOP - Washington DC - News 0=3

1500 USA tent WLQV - Detroit, Michigan, Relig. Program 0=2

1510 USA WWZN - Boston, Massachusetts - Sportstalk "The Zone 1510"
0=3-4 (S=4 !) Huge signal

1520 USA WWKB - Buffallo, New York - 1960s Oldies 0=2-3

1560 USA WQEW - New York City, New York - Radio Disney, Soft Pop 0=3
(S=4 !)

1570 CAN CFAV - Laval, Quebec - Oldies 0=3 (huge signal !)

1590 USA WARV - Warwick, Rhode Island - Talkshow 0=3

1600 USA WUNR - Brookline, Massachusets - Talk 0=3

1610 CAN CJWI - Montreal, Quebec - Merengue music, talk in spanish 0=2

1620 VIR (US Virgin Islands) WDHP - Frederiksted - Phone in talk 0=3

1630 USA Unid very weak signal 0=1-2

1640 USA tent WTNI - Biloxi, Mississippi - Talk 0=2

1650 USA WHKT - Portsmouth, Virginia - Pop music 0=2

1660 USA and ? 2 Unid Stations - weak 0=2

1680 USA WTTM - Princeton, New Jersey 0=2

1700 USA KVNS - Brownsville, Texas - talk 0=2

I have rarely ever witnessed anything comparable to the big signals on that morning, even after 1512 RVI Wolvertem (a nearby powerhouse in BEL, only a bit over 140 km away from here) went on air the signal from WWZN on 1510 was sooo huge that Wolvertem actually encountered very loud het QRM: In fact both stations were sometimes coming in with the same strengh !

Julian Hardstone knows the Degen DE 1103 radio set very well, while using the amplified built in telescopic antenna the signals on 1510, 1560, 1570 were so strong that the s-meter reading reached full levels !

I never have seen that before using the Degen DE 1103, even 1620 WDHP (Frederiksted, US Virgin Islands) sometimes had very impressive s-meter reading up to half level standing beside my roof window.

Best regards and good DX from Germany

Björn

Hi folks,

Manitoba back on 950 / 1250 - sometimes 950 is the
stronger. Signals at best fair.

Also have a country station right now on 920 weak -
wondering is this Portage la Prairie.

At 0900 two stations present on 920 one with networked
news one with a yl reading news and then into country
music - I presume this was CFRY.

Right Im going back to bed for an hour :)

regards

Paul Logan,
Lisnaskea, N. Ireland.

520. No DX possible here at the moment

Yahoo group: skywavesmw
Date: 2006-01-15 10:45:54 UTC
From: John Faulkner
Topic: 520 Message: 520

The noise levels increased to 7dB last night, leaving only the stronger east coasters popping their heads through, like WLAM and WWZN. There was a lot of fog around overnight so I wonder if that somehow played a part.

I tried some experiments around midnight, switching off various electrical things, fridges, freezers, mobile chargers, lights, digital & cable TV boxes, etc. but nothing reduced the noise. It is a general wideband mush. Things were somewhat quieter this morning around 09:00 and I could hear WBBR lifting above it on 1130. The fog had gone though.

I have started construction of the EWE which will run roughly NWN/ESE and hope to get this finished tomorrow. Two electricians copper earth rods are now sunk into the garden. The gerden is very rocky and thick with clay. The grass doesn't grow too well in this. I don't know how this will affect the earthing.

I feel like I am up against it all once again.

Good DX !

John

I have started construction of the EWE which will run roughly NWN/ESE

Of course that should read WNW/ESE. Just to add something from yesterday - I can't find the original message but somebody suggested I go for 1000 KOMO and 1410 CFUN. These channels are next to impossible here. 999kHz is home to a local Nottingham station and I forget what restricts access to 1410 but it's a pain the ****. I have heard audio on 1410, probably talk from WPOP but I have haven't ID'd them this season, despite a few overnight recordings on there.

Cheers

John

523. Dream for your Rx

Yahoo group: skywavesmw
Date: 2006-01-16 00:58:12 UTC
From: Jurgen Bartels
Topic: 523 Message: 523
Attachments: 1 described; binary payloads are missing from this source WARC

Julian Hardstone recently made me aware of the free software-receiver for DRM that also demodulates AM, USB, LSB, FM.
And the best of all: the bandwith can be adjusted in 1Hz steps from 0..20kHz !
It is called DREAM and runs on a PC and uses your receiver as its front-end.
You feed the IF of about 6..12Khz to your soundcard. How to get that IF? Well in my case it was very easy, I own a R390-A and can set it to SSB and turn the BFO control so far until I get a tone in the 6 to11 Khz range when the Rx is tune to a nominal frequency. For other Rx here's what you need to do:
http://www.drmrx.org/receiver_mods.html

There are a few versions of dream around, the recent one is V1.5cvs
http://pessoal.onda.com.br/rjamorim/dream.zip
The one from http://home.planet.nl/~rickvdw/digitaal/drm2.html is older

DRM mode
At least an IF of 6kHz is needed, that works fine with me. But a higher one seems to be better during locking. Your receiver needs to be set for 12kHz bandwith or higher. Dream shows the receiverd spectrum and that should look like a rectangular area. Then it will lock in quite fast. The sound quality is great, depending on service. 1485 "Das Ding" in Kaiserslauertn Germany runs with 22,6 kbps

AM, LSB, USB
This is the real fun !
Dream displays the spectrum of the IF. You see the carriers as the peaks, pressing Ctrl-A sets the demodulation frequency to the highest peak, bang, you now hear audio, no need to adjust for zero beat. If you want go to a lower peak, just click on its peak. That's all. With the filter bandwith slider you just set it so wide until the next visible peak. The set bandwith is shown as a shade in the spectrum. If you include a peak you will hear a het. So avoid it. This is actually helpful, you really see what is of better use LSB or USB, select it and than do the final BW adjustment. The BW does not replace your rx filter, but adds to it. In my case I set the R390A to 4 kHz

Example:
See the screenshot. The red line is locked on 1510 WWZN, the peak 2kHz higher is Greece. The shaded area is the BW, I adjusted it so that it would not include the peak at 2kHz that would be audible as a het.

Another method for tuning: watch the spectrum while you tune your rx, and adjust it so that the visible carriers move under the red line

The noise reduction can reduce noise quite a bit, but also warbles the audio, try if it works for your case, sometimes it does not.

The demodulated audio can be saved to a file.
Dream can also demodulate from WAV files, call dream -h to see the options. So you can indeed record the IF to WAV and demodulate later on from there. I have not yet tried it.

The Advantages:
1. For receivers lacking an easy to handle LSB/USB function this is an excellent add on.
2. Variable bandwidth
3. DRM decoder

The disadavantages:
1. Dream needs time for processing, so there is a delay in audio, tuning thus becomes a bit difficult.
2. I cannot record the audio with a separate program like RecAll-Pro, because it would switch the input source and with it the input source of Dream, there's apparently only one audio input source selector PC-wide.

I wished I had used Dream while I TA-Dxed in North-Germany, but then I got the impression it would need a special fast soundcard. This was not true.

Jurgen

524. Re: [skywavesmw] No DX possible here at the moment

Topic: 520 Message: 524

Rocky clay earth are known as poor natural earth.
Try laying underground radials preferably as long as possible.
Even short ones are better than nothing.
However on a EWE ant the earth point is for matching termination only I think.
When I add radials to my vertical my receive noise reduces
only a few DB but this is critical on weak signal DX.
The only way to do it John is keep trying different antennas loops etc.Some might just suit your local enviroment better than others.
Every enviroment is different and local qrn can be propagted in different polarities so its difficult to assess therefore
wat suits you might not suit anyone else.
Here I have the same problem on Long Wave.
MW is ok....good luck

Every enviroment is different

Thanks Ian. Yes, this is spot on. My 200 foot longwire is much quieter than the ALA1530. This has always been the case whatever noise is present.

Noise levels this morning were reduced even further with levels now down to S3 (loop), almost back to normal now. I still think Christmas had something to do with it somehow - or at least part of it. Christmas lights everywhere (never seen so many around here) and all the neighbourhood's kid's new electronic toys and gadgets.

I wasn't able to listen or do any recording or serious listening overnight as I didn't get home until 5am - shattered after collecting our daughter from Manchester airport at 3am, but I did get chance to call in on Julian during the evening and have a few quality beers at the Queen Vic in Edgeley and talk radio matters ;0)

On arriving home I noticed the MW band was almost dead for TA. Conditions had blown out a little. I had to be up again at 9 for a meeting at work and managed a quick tune around at 10am - I was really surprised to hear WBBR and WKBW booming in so well at this time. The disturbance may have taken the edge of the exotic stuff for a night or two though. 1470 also had a couple of signals and a few other common TA channels were quite lively too.

Good DX!

John

> thanks Jurgen, i'm just downloading it, and i have an idea ;-)
> are the fm bandwidths variable, 50khz would be handy

Yes. The max BW is 24kHz.
I only checked it what can be set, but did not check with a real signal, I don't know where a narrow FM signal can be received below 30MHz

50kHz would not work, as the "carrier" is only 12kHz

Check also the forums, where you can find some nice ideas
this is the old one
http://sourceforge.net/forum/?group_id=71084

this is the newer one
http://drm.sourceforge.net/forums/

i.e. you can start Dream with stereo inputs used as I and Q inputs where you can hook up your self-built hardware front end.
It seems that Dream can also *generate* DRM signals, so you may transmit DRM.

See dream -h

Read W8JI sight he says exactly this. The other thing of interest is the inducement of noise from any antennas situated near to the in use antenna.
There is not much you can do about this in a small location except stick to 1 antenna hihi.
3 strong USA stations already on 1390..pity I have to go bed.
Some news from the NDB site there has been reception of Alaskan NDB by 2 europeans.One located in ireland and the other I think is in holland.

Topic: 530 Message: 530

I have looked into the problems with the Skywaves website and it seemes they were a little hasty removing the Skywaves site *before* it had actually expired. I am very surprised that they have not contacted me about the forthcoming annual renewal in advance as they usually do. They have, until now, always sent out umpteen renewal reminders well in advance of the renewal date. I am currently on their "liveperson" chat window help to settle things. Payment will be by cheque so the site may not return for a few more days.

Furthermore my email facilities have also been suspended so I am having to communicate directly from within the Yahoo pages. I am not amused.

531. nbfm reception

Yahoo group: skywavesmw
Date: 2006-01-17 21:09:06 UTC
From: Julian Hardstone
Topic: 531 Message: 531

The DREAM virtual receiver supports nbfm very nicely. The soundcard sampling frequency places a theoretical upper limit of 24kHz on the audio bandwidth, but your receiver hardware filters will only have a fraction of that bandwidth.
You will hear nbfm in two frequency bands below 30MHz:
There is still plenty of use of DECT1 phones, every 20kHz from 1642 to 1782kHz
There should also be plenty to hear, every 10kHz from 26565 to 27405, or try 27781 - wish I'd had this facility ten years ago!

No, no!! You need to feed an IF signal, not demodulated audio, to DREAM, so you must use SSB mode on the Uniden
You'd also need to set the Uniden bandwidth wider than 15kHz, but not wider than 24kHz - so, it's not feasible for your application. In practice, the widest realisable bandwidth would be about, yes, 15kHz

But it's just fine for nbfm 8)

1680 WDSS Ada MI. Radio Disney ID's and music // 1650. Fluttery signal. Weak 04:10 18/01 JF

Another late night returning home (04:00). Switched on the 7030 and I was pleasantly surprised to hear WDSS just sat alone on 1680 when I tuned across the band. KAVT Fresno CA also carries Disney on 1680 but can we really see this being the station I heard? I strongly doubt it, especially in view of the conditions.

Recorded 1390 for the rest of the morning. WEGP dominant but there was an ID of WHSY at 04:30 - presume a WEGP simulcast unless anybody knows different?

Suspected CKDY on 1420 was the only other thing of minor interest. Nothing else to tell really.

Back to more Dream tests.

Well I was a bit dubious about AF DSP
but thought I would give it a try.
It takes a bit of getting used to but have already had some success on
NDB's.
I set the TS2000 to its 50hz narrowest setting which I often use for NDB
Beacons and put its IF DSP on NR2
which is the best on cw.
Loaded up Dream and it wrked fine first time.
Selected CW AGC to off and Dreams NR to high.
Yes it was definitely amplyfing the peaks.
Certainly will give it a further play as it takes some getting used to and
sorting out the delay ect.
Will give it another play whilst slope detecting USA MW stations and see
what its side rejections like.

The programme is a little volatile and has crashed a couple of times.

Thanks Julian

Yahoo group: skywavesmw
Date: 2006-01-19 14:01:42 UTC
From: John Faulkner
Topic: 542 Message: 542

740 CHWO Toronto ON. Golden oldies "on Toronto's AM 7-40" Fair
09:28 19/01 JF

1090 WBAL WBAL Baltimore MD. Much easier with Dream IFDSP
software Fair 00:12 19/01 JF

1280 CJSL Estevan SK. Weak talk and ID "12-80 CJSL" clearly heard
mixing WFAU Weak 07:29 19/01 JF

1380 UNID Pop station playing KT Tunstall song "Suddenly I See"
Weak 09:37 19/01 JF

1430 CHKT Toronto ON. Chinese programming mixing WENE Fair
23:54 18/01 JF

1560 WQEW New York NY. Radio Disney Fair 09:48 19/01 JF

Other observations:

820: C&W and talk station
640: 2 talkers at 00:25
1290: 2 stations both talking at 07:41
1280: reference to "Newstalk Radio" at 08:02
1570: 3 stations approaching 10:00 - CFAV, a talk station and what
sounded like nostalgia.

1150 and 1160 had TA stations but these channels were still quite
difficult to access.

Dream seems to have opened up quite a few channels to me. 1380 is a
good example - who plays current hits here though? 1020, 1030, 1110,
1360 and 1410 were also easier. Best of it is, I was not using the
phasing system for the above loggings, just the solo ALA1530!

I'm disappointed I didn't get the recording of CJSL, I hadn't got
Dream in record mode when I noticed there were two talk stations on
1280 as I arrived on the channel and, almost immediately, I
heared "12-80 CJSL" at the bottom of the hour. I checked the all-
time log and realised that I'd just had quite a catch!

Good DX!

John

It does not insert a carrier but just mixes the whole IF spectrum from 455 kHz domain down to the 12kHz domain and filters & demodulates it there. Your new IF is now 12kHz.
Note: you are doing it with SSB already: it mixes 455kHz with 455kHz and gives 0Hz plus the sidebands. For Dream you mix 455 with 443 or 467 kHz
So the whole spectrum only gets shifted lower. This works as long as the bandwith is small (lower than 2x 12 kHz), if it is greater you would hear aliases.
I shift it to 6 Khz and have to set my Rx to 4 or 8 kHz BW otherwise it gets noisier since the wide spectrum wraps around zero and falls partly back into the band. (called: alias)

You can process the signal in the 12kHz domain the same way as in the 455kHz domain. At first glance it might look odd, but it is not, only the digits are smaller.

Jurgen

Tried Deam on narrow modes utilising the ts2000 narrow filters dwn to 50hz
on cw
Then deploying Dream.
On the wider settings Tthe audio sounds very processed.
Is this normal
I am using a 16 bit soundblaster.
The recording is on line in and the output is Wave.
Is this correct.
If I choose line in output then it just bypasses Dream
My first impressions is that this proramme can certainly improve reception.
Any advice would be appreciated.

Regards Ian G0FYD

548. Re: Dream

Yahoo group: skywavesmw
Date: 2006-01-20 00:12:21 UTC
From: Julian Hardstone
Topic: 546 Message: 548

"The Icom PCR 1000 is a software-based receiver that is ideally suited to conversion for DRM reception with the minimum of modification to the existing circuitry. The Icom PCR 1000 has been successfully modified to receive DRM signals using the Fraunhofer DRM software distributed via the www.drm.org website.

"The modification makes use of the universal downconverter available from SAT-Service Schneider

"The receiver has software controlled IF filters capable of passing the widest DRM signals (20kHz), ample space for the downconverter board and easy
connection to the circuit boards without intrusive modifications, for those with a fine Soldering Iron and a steady hand!"

- from http://www.drmrx.org/mods/ICOM_PCR1000_DRMConversion.pdf

This article requires you to add a downconverter board. However, using the PCR1000 in SSB mode will equally do a downconversion, the only question then being whether you have sufficient software control of the PCR1000 to convert down to the right frequency. I am not familiar enough with the PCR1000 to know what is possible. Can anyone help re the CIO?
==========

The audio from the 'DREAM analogue receiver' should sound particularly pure, especially using synchronous SSB demodulation of an AM signal, so if it sounds processed, check that its AGC and Noise Reduction are switched off. Make sure that the front-end receiver bandwidth is always wider than the DREAM bandwidth setting. I have added a text file in the 'files' section, to help anyone thinking of trying DREAM for analogue or digital reception.

549. Poor Conditions

Yahoo group: skywavesmw
Date: 2006-01-20 03:22:02 UTC
From: John Faulkner
Topic: 549 Message: 549

Conditions well down on the previous night. Seemed to be struggling to ID what few stations were present. Dream is still letting me get in on the channels more easily. I was particularly concentrating on 1270, 1290 and 1410. All had audio but it was not a good night for IDs. 1590 had a pile-up at 07:00. Nostalgia, sports and Spanish - think I heard a R Reloj ID.

Did some more comparisons between the processed Dream audio and the barefoot 7030 - Dream won every time!

I find the Dream noise reduction *can* help in a few situations. It helps reduce only certain types of interference and *can* completely eliminate it though this is the exception rather than the rule. Typical of any DSP filter I guess. (?) It obliterated some harsh TVI noise at Julian's house the other evening. As for helping the DX signal break through the noise, it *helps* at times but the DSP filtering also corrupts the audio to some extent. Each situation is different and there is always the trade-off between removing the noise / leaving the signal intact. Where I find the filtering is NOT good is when you have a weak signal buried under another on the same frequency, the filtering will remove the weaker one as it probably assumes it is part of the noise level.

Good DX!

John

550. EWE Installed

Yahoo group: skywavesmw
Date: 2006-01-20 11:45:58 UTC
From: John Faulkner
Topic: 550 Message: 550

I have finally installed an EWE antenna on the garden. I was sceptical about their performance since those I have read about are only 25 feet long. But after reading reports here about how good they are I had to try one. It is, to say the least, very impressive but I need a higher value resistance than 1000ohms as my earth is very poor - the ground is full of clay and rock.

The pot is turned to maximum resistance and I can hear Spanish dominating my two local Clipstone transmitters! Mixing the EWE with the ALA1530 notches Clipstone right out without any difficulty. The normally unshiftable German on 972 is also buried under a Spanish station and something from the UK. Luxembourg is considerably reduced (not tried phasing there yet) and the German on 1422 is mixing with the N African station.

In a word - amazing!

John

Hi John and to all other DX lads !

That's great news, the more I read about the fabulous EWE antenna construction, the more I would like to bulid one here.

But it would most probably be up in the attic under the roof here. There is enough space there to set up a EWE with 2 x 3 meter height and 10 meters lengh, if only earthing it all would be that simple up in the attic ?

Julian, would you also like to constuct a EWE antenna in your backyard ?

good DX, best 73s

Topic: 550 Message: 556

Hi Julian and all DXers,

I would really like to set up a EWE because it will fit perfectly between all of the wood up on the ceiling of the attic. On the eastern end there is a chimney shaft (perhaps another earthing connection ?).

or maybe use the yellow/green marked earthing wire that is connected to the FM/TV/Sat antenna mast ?

Or perhaps use an artificial earthing ground plane made up of many connected wires ?

850 WEEI, Boston, MA is audible on the Degen DE 1103 next to the window.

557. Overnight 21-01-06

Yahoo group: skywavesmw
Date: 2006-01-20 17:24:53 UTC
From: John Faulkner
Topic: 557 Message: 557

Looks like the good results yesterday evening were largely down to the EWE. At local sunrise I have been hearing "pile-ups" on TA channels which don't usually produce audible DX AT ALL ! Lots of overnight recording to go through but three tentative Prairie stations heard. Now just to hope I can hear an ID on them.

The excellent evening of DX last night tended to fizzle out a little after midnight. This would agree with reports in the MWC of a similar thing happening the previous evening.

Paul Crankshaw of the MWC made a comment about the EWE following my posting there ...

John Faulkner wrote:

> TA all over the place. I presume this isn't just the EWE but conditions.

That's what I thought when I first tried the EWE .....but it was the EWE :)

600 CBNA St Anthony NL. CBC play // 750 CBGY Fair 00:25 21/01 JF

700 WLW Cincinnati OH Commercial spot and ID "700 WLW" Fair 00:18 21/01 JF

780 WBBM Chicago IL. "WBBM Newstime now it's 1:54" Rolling news over CFDR Fair 07:54 21/01 JF

790 CFNW Port-au-Choix NL, Presumed. Two lots of ad breaks heard here mentioning companies in Newfoundland but no ID. Soft pops, generally donimant for 30 minutes Fair 07:51 21/01 JF

1400 CBG Gander NL. Audio appearing nice and early on the new EWE V weak 19:55 20/01 JF

I didn't realise how many posts I made yesterday evening - partly due to the excitement of having the new EWE to play with and the conditions, but also to alert everybody that some of the daytimers might have been available.

Following on from the good start ... By midnight, conditions had taken a tumble but there was still some of the less regular sations around. I left the recorder on 770 for WABC - as regular as this one is I have not managed to catch an ID from it all season. Tonight was also futile.

At sunrise I tuned around and the band was quite lively with pile-ups on many channel which are often difficult to access. On 790 for instance there were clearly three stations present. One was probably CFNW with frequent mentions of St Johns. C&W was also present here, same for 920. I checked 1270 which had v weak English talk and a pop station. 1290 had a jumble of stations too, I was after CFRW but instead I only caught two rather ambiguous IDs of either WKBK (Keene NH) or CJBK (London ON), they sound similar in the mess.

Fade-out was quite early with 1130 WBBR and 1520 WKBW audio fading away shortly after 09:00.

Good DX!

563. DRM on the FRG-7

Yahoo group: skywavesmw
Date: 2006-01-22 02:16:16 UTC
From: Julian Hardstone
Topic: 563 Message: 563

The 30+ year-old FRG-7 must be one of the easiest receivers to modify for use with the DREAM software receiver. The only mod required is the removal of C440, 220nF on the IF-AF unit. It should ideally be replaced with 10nF. Then the BFO coil should be tuned for a heterodyne of about 12kHz in the LSB mode, and C404 trimmer can then be set to give normal USB operation. Feed the 'record' line to the PC soundcard, and leave time for the FRG to warm up and stabilise.

The bandwidth of the FRG's single filter is just about wide enough for 10kHz (MW) DRM channels, and is fine for 9kHz (SW). Using the DREAM analogue receiver, you can now have some usefully narrow filtering for SSB or TA-MW. Unfortunately, MW performance is compromised by the poor dynamic range, though I did manage 600 CBNA tonight, but DREAM will greatly improve the FRG-7 on SW.

I have added files showing the FRG-7 in action, in the Group 'files' section.

564. 1390 khz in Spanish

565. Dream vs. FDM-77

Yahoo group: skywavesmw
Date: 2006-01-22 09:49:50 UTC
From: Jurgen Bartels
Topic: 565 Message: 565

After my posting of Dream as a 12kHz IF processor for AM, SSB, FM & DRM Francesco Clemente pointed me to FDM-77. So I took a look at that.

FDM-77 can be obtained from http://www.elad.it The free version has DRM disabled. FDM-77 is mainly meant to cowork with its hardware frontend FDM77-receiver, but you can feed it the 12kHz IF from any other receiver. In this case you only can use the controls for IF, demodulation and audio.

As always with two programs there are pro and cons on each side, the optimum would be the combination of both.
I tested it with my R390A receiver that is analog tuned, thus there are no fixed tuning steps

FDM-77 pro
1. the delay between input to output is much less then Dream, thus the feeling of tuning is more immediate, you don't have to wait long to hear what you tuned to.
2. Two IF notch filters
3. Audio: volume control and a 6 band equalizer are available

FDM-77 con
1.The user interface only appears right when the fontsize of Windows is 100%. I use 125% fontsize (120 DPI) because of my eyesight. Many components like the meters slide controls etc. are then misplaced and thus unusable. I wished the authors would correct this, it is so easy to do.
2. Two menus have to be open to simultanously control mode and bandwith
3. The bandwidth cannot be changed continously by simply moving a slider control via mouse. Instead a dropdownbox must be clicked on to select a few predefined values. The way Dream does it is a lot more comfortable and immediate.
4. Bandwith is not remembered independently for USB and LSB, changing the value for LSB changes the USB side as well.
5. There is no function for zeroing in on a carrier (IF shift), like Ctrl-A in Dream or clicking near a visible carrier. To get zero beat the IF shift control has to be changed or the receiver has to be adjusted, both methods I dislike. Ctrl-A is what I use all the time in Dream.
6. Lacks a noise suppressing function. The one in Dream is not perfect but often does help

What do I prefer?
So far I prefer Dream. The controls are more useful and immediate, the way to adjust the bandwith and zeroing in on a carrier is simply perfect. However Dream lacks volume control, equalizer and IF notch filters. Those would be on my wish list. Also it delays the audio longer making it a bit less immediate when tuning the band. Dream comes with DRM while FDM-77 enables DRM only in the paid version.

So what I would like is all the pro's in one package. Well that will be just a wish.

Jurgen

566. Skywaves Website - Latest

Yahoo group: skywavesmw
Date: 2006-01-23 12:17:32 UTC
From: John Faulkner
Topic: 566 Message: 566

I am still in touch with Web Mania, the hosting company. Just to fill everybody in, this is the situation ...

Web Mania have generally been a reliable hosting company but there have been a few problems in the last two to three three years.

Every year when the renewal is due I receive several email reminders. These start to appear roughly two months in advance of expiry. I also use Web Mania to host my work website. Add the renewal dates for the two domain names too and things start to get a little confusing. But thankfully there are always the reminders ... or "were".

This time there were no renewal reminders. Then Web Mania decided to remove the Skywaves in advance of the full year, then replacing it with their own page which promotes themselves while also telling the world that I haven't paid my renewal. I am pissed off to say the least (please excuse my vernacular).

Furthermore, I used Web Mania's on-line webchat to ask what was happening. I received no apology for the premature site removal and was told that once they had received my cheque they would immediately reinstate the site - I have this in writing! Still, several days after they have received the cheque they still have not returned the site. I will now be going back to their webchat to find out what is going on.

I am looking for a replacement hosting company who charge reasonable rates - they need to be sensible rates because these are now paid for out of club funds and I don't want to be running up large bills for the group. If anybody can recommend a suitable and reliable company please let me know - and preferably one who use MySQL v4xx.

As you may have noticed, there has been little in the way of change on the Skywaves site. We are currently designing a new and fully interactive site which we hope will be on-line before the summer.

Thanks if anybody can help.

John

568. Web Mania / Skywaves Page - Latest

Yahoo group: skywavesmw
Date: 2006-01-23 18:00:35 UTC
From: John Faulkner
Topic: 568 Message: 568

I have just been on the live webchat help with Web Mania. Following their acknowledgement of receipt of my cheque last week and their promise that the Skywaves website will be back online today, they have just informed me they are still awaiting payment and I should contact the billing department.

F*** me - what are they playing at - have they been taken over by NTL?

PLEASE someone recommend a new hosting company and we can kick these dozy bastards into touch.

John

I use Donhost for my coastal radio web site and also our local club
site, have always found them excellent.

Pay monthly and on-line control of most things, including decent stats
of visitors etc.

1450 WKXW Atlantic City NJ. "ESPN Radio WKXW Atlantic City" ID
Fair 03:00 24/01 JF

Reception not so good tonight following the bumpy conditions of yesterday evening, but there was a significant improvement by sunrise with the Toronto area coming back.

Some more comments on the EWE antenna: I initially set up the null using Clipstone Talk Sport 1071, which is actually not directly off the back of the EWE and towards the ENE. I decided to reset the EWE resistor using Holland 1008. This was already considerably down on usual anyway and getting knocked about by another station. A slight adjustment totally eliminated Holland, leaving a weak Spanish station alone on the frequency (Las Palmas?)! The nulling power of the EWE makes it a serious alternative to the phasing system. So much so that I am considering removing my 200' longwire and ALA1530, though the ALA1530 could probably still be useful for phasing with the EWE. What I need to do now is extend the resistor into the shack so I can adjust it for each part of the band, though I wonder how necessary this is.

This leads me to ask a few questions about the EWE and other's experiences. Does anybody know of any polar plots for EWEs? I

assume the beamwidth at the front end is wide enough to hear South America and North America if I beam between the two, or would I be better having two separate EWEs? I think I may know the answer to this, i.e. have two separate ones. But what about the rear null - just how tight is it? It *seems* to be much broader than the null I get with loop/longwire phasing though I could be mistaken. It is definitely less fiddly to set up and is good for a few hundred kHz spread.

Good DX all!

Correction - the time of the WRCA logging should have been 06:00, not
09:29 as stated. WRCA finally disappeared just before 09:00.

575. RDS for MW

Yahoo group: skywavesmw
Date: 2006-01-26 00:31:49 UTC
From: Jurgen Bartels
Topic: 575 Message: 575

When using the newer version of Dream you may have wondered what that AMSS window is about.
Then read this
http://www.ebu.ch/en/technical/trev/trev_305-murphy.pdf

It displays the info of a MW station (in AM) the same way like RDS does for FM
Each station has its own ID code, the one for BBC-648 displays: E1C238

Only few actually transmit AMSS, one is BBC 648 or 9410 and RTL 1440
I just tried 648, and it works !

The great thing: you can switch your Rx bandwidth to 100Hz and still get it decoded. The report says it would even decode when the audio is already unsuable. Would be helpful during TA-DX, once the US Tx use it

Sounds very interesting! You have answere my question regarding resolving AMSS at low signal levels but I bet the skywave and co-channel QRM will upset things.

I was wondering if the American digital IBOC transmissions could be decoded?

Finally, you refer to the "latest" versionn of Dream. What exactly is the latest version? 1.2.2 ?

Best wishes

John

From: John Faulkner
Topic: 577 Message: 577

Sorry to bring this up yet again but this ought to be repeated occasionally for our newest members.

As much as 90% of my postings to the both Skywaves groups never arrive. They are probably being deleted by an aggressive spam filter somewhere in the system. You may be experiencing the same problem yourself. I was under the impression that things were improving over the new year but they have definitely deteriorated since then.

These problems are not confined to our groups but seemingly across the board - other groups and other ISPs. People are finding that more and more of their "genuine" messages never arrive, not even in their "anti-spam" folder while the spam itself gets through. I hope you will all ride through these problems with us.

It is much easier for me to post directly from within Outlook but alas very unreliable. I recommend that anybody experiencing these problems post directly from
http://uk.groups.yahoo.com/group/skywavesmw/post

My problems with another group are worse. While many posts don't arrive, some of them loop (NTL?) and last year around 200 copies of one of my posts appeared on their group. This has been happening again recently and not just with my postings.

Isn't modern technology wonderful!

John

Yes, I think so, too. I merely stated what the BBC engineer wrote. :-)

> I was wondering if the American digital IBOC transmissions could be decoded?

That's probably another package. I have not seen it yet.

> Finally, you refer to the "latest" versionn of Dream. What exactly is the

V 1.5cvs
http://pessoal.onda.com.br/rjamorim/dream.zip

The backgrund of the spectrum display is white now, with a blue line.
Also it pops upwith a second AMSS window.

It also locks DRM much better

Watch the meter in the AMSS window, it displays the phase of the carrier, and is stable when there's no AMSS. But swings back and forth a bit when AMSS is modulated.
Check this meter during QRM on TA, I guess as long as there is a carrier the meter will stay stable. If so, then AMSS could be decoded under these circumstances. If it wildy jumps, there is no chance.

Does the USA use AMSS in its IBOC digital system? IBOC is not the same as DRM.

Also at the moment, apart from the occasional mistake, IBOC is
limited to daytime operation in the USA. Stations are supposed to
switch it off before it gets dark.

Mark

To make it clear:
AMSS is meant as an add-on for AM not for DRM or IBOC
to assist in station identification. For DRM / IBOC it is not needed since the
it has this function already embedded.
AMSS uses phase-shift modulation of the carrier.

583. Noise Problems / Mail test

Yahoo group: skywavesmw
Date: 2006-01-29 05:38:55 UTC
From: John Faulkner
Topic: 583 Message: 583

Once again I am plagued by severe noise levels, making medium wave almost impossible. The noise is worse late on in the evening and
sometimes improves by sunrise but never by much. It was at S9 last night. Once again I am back to square one. Perhaps I need to
just install a few more ferrites inline with the coax feed?

There is a DVD player and NTL (oh no, not them again) cable TV box which radiate enormous amounts of crap but it doesn't appear to
be these which my antennas are picking up.

Some research is needed.

This message will also serve as a test from my new Google Mail account. I have mail forwarding set up so I can send and receive
from Outlook. If this solves my mail problems over the next few days I will have probably narrowed things down to one provider,
though nothing is quite that clear. I think you might be able to guess who I am referring to.

Hmmmph ... my mail to the FM group arrived within a minute, my mail to this group still hasn't arrived. This is resend number 1.
Perhaps it is Yahoo after all.

Cheers

John

1460 WDDY Albany NY. Radio Disney // others Weak 07:24 30/01 JF
1600 WMNE Riviera Beach FL. Radio Disney // others Weak 07:26 30/01 JF

1290 had Coast To Coast around sunrise but the signal always faded down at the wrong moment. C2C appears to be carried by several stations on 1290.

1080 and 1260 were a nice surprise - the EWE is obviously doing it's job well. The German station on 1260 was inaudible!. Local Gem AM 999kHz (Nottingham) has gone too! I will be conducting some EWE experiments this week. For one, I need to get the tuning resistor inside the house by the radio. I am hoping this should be achievable with a simple transformer arrangement. Although the rear null is fairly uniform across the entire medium wave band there would be definite advantages if the resistor could tuned for each frequency. Locating the null is so simple I'm sorry to say that it renders the old phasing system useless!

For the last few nights I have been suffering severe noise problems (S9+1-dB) which has made DX listening impossible. I have narrowed it down to an RF amplifier (which was fine to begin with) but suddenly induces so much crap that even local signals had become noisy. I've got it back down to an S2 -3, which is not quite as good as I would like, but a vast improvement from 10 over 9!

Good DX!

1290 WJNO West Palm Beach FL. ?WJNO West Palm Beach? heard after other unid W call (WKBK?) at toh
Weak 06:00 31/01 JF

Conditions not so good this morning. WJNO 1290 is a personal first here. WKAT 1360 was crystal clear for much of the morning and
WDRC was generally buried beneath it.

I'm now posting from my new Googlemail address. Time will tell if this solves the duplicate posts problem. There are still delays
so I suspect this will not make any difference, especially as I see I am still not the only one who is experiencing this problem.
The use of Googlemail has not made any difference to similar problems experienced posting to other groups. It looks like these
problems are beyond our control and no doubt a sign of the times (spam filtering, etc).

Good DX!

587. Conditions

Yahoo group: skywavesmw
Date: 2006-02-01 13:12:36 UTC
From: John Faulkner
Topic: 587 Message: 587

A poor morning. Monitoried 1290 only to find R Puerto Cabello dominating. There was another Latin station mixing with this. It sounded Spanish but had an unusual accent / dialect.

1470 was dominated by WLAM and R Cristal del Uruguay. I think R Rafaela from Argentina was in there too.

Finaly, there was some interest at 07:00 when WLAM appeared to be mixing with another ESPN station. There was a definite echo on the ESPN jingle after the local ID at the top of the hour. It didn't sound subtle enough to be an echo effect but I could be wrong.

Apart from the lack of DX it was a nice electrically quiet band. But in a word, "Rubbish"! considering conditions are so quiet Maybe the February blues have settled in.

DXLC forecasts ... "The geomagnetic field is expected to be quiet on February 1-7 with a chance of unsettled intervals due to effects from CH207 and CH208 on February 1 and 2."

Good DX!

John

Following the problems we had with the BFMTVC website hosting last week and other recent problems we have decided to take our hosting elsewhere.

Web Mania have generally been a reliable company but seemed to suffer an increasing number of problems over the last few months, particularly with emails being delayed for up to 24 hours and this has also been increasing in frequency. I don't know the exact details but some (all?) of their servers are located at the premises of another company, Redbus Interhouse, which caused further complications last year when the premises of Redbus caught fire, resulting in the website being taken offline.

We plan to make the transfer to the new hosts, Dataflame (www.dataflame.co.uk), in the coming week. Unfortunately this will result
in further downtime while the site propagates around the net following the transfer. This should mean an interruption of a few hours in the UK and up to two days elsewhere in the world.

The new hosting company will allow us to expand the site which we are unable to do via Web Mania due to software incompatibilities and an unwillingness of Web Mania to update.

Once again, we apologies for the interruptions. Normal service will be resumed shortly! Sorry, but there won't be a test card and music either.

Regards

John

710 WOR New York NY. Promo for ?Joey Reynolds, keeping you up all night on 7-10 WOR? promo at the half hour Good 23:30 04/02 JF
770 WABC New York NY. ?77 WABC? ID caught in speech, xf CKVO Weak 00:33 05/02 JF
1110 WBT Charlotte NC. ?11-10 WBT? ID at top of hour. V difficult channel due to local BBC R Derby to the SW Fair 01:00 05/02 JF
1390 WFBL Baltimore MD. ID in pile-up Weak 23:46 04/02 JF
1390 WPLM Plymouth MA. Relay of FM service ?Easy 99? with Dick Robinson. Crooning! Weak 23:47 04/02 JF
1480 WSAR Fall River MA. Ad break with Fall River addresses, WSAR ID Fair 01:21 05/02 JF
1680 WDSS Ada MI. Radio Disney pops // 1650 Weak 07:45 05/02 JF

Another frustrating night for IDs. There seemed to be a lot of DX at midnight. My overnight recordings on 1480, then moving to
1410 after sunrise revealed several stations but little in the way of IDs.

1480 was dominated by sports which I presume was WSAR though there were clearly two English stations present and a third - Spanish,
I suspect WMDD with lively Latin music. 1410 had two stations, the dominant one being sports, the other popped up during the news
at 08:00 with a YL in English. It soon faded.

WMYF 1380 was surprisingly good tonight and dominant.

At last I have added 770 WABC and 1110 WBT to my log this season. WBT was at fairly good levels around 01:00 but local BBC R Derby
is a pain in the, er, neck.with it's powerhouse Quarndon tx on 1116 being un-nullable to the SW.

Good DX!

593. 1660 khz talk

Yahoo group: skywavesmw
Date: 2006-02-05 18:30:00 UTC
From: patrice.privat
Topic: 593 Message: 593

Hi

talk show this morning 0710 utc onwards

guy speaking of his iraq experience, mentions a 14 year old iraqi girl several times.
advert mentions something about John Paul II

checked the Marco Island FLA station but did not match what I had on the headphones.

no other talk/religious format i know of on 1660.

anyone knows please folks ?

Thanks for your time

pat

Hi Pat

Just a guess, I can only see this being WCNZ if it was religious. It has occasionally been observed lately that programming "heard" does not match that stated on the station's website.

If it was a religious format there is nothing else it could really be. The other two most likely stations on 1660 be WWRU Jersey City which is listed as having Ethinc/Korean programming and WFNA Charlotte NC which is non-stop sports.

Hope that is of use.

Cheers

John

590 VOCM St Johns NL. C&W song // internet stream. V weak 19:50 05/02 JF
930 CJYQ St Johns NL. Folk music popping up early! Weak 19:47 05/02 JF
1400 CBG Gander NL. YL talking about her family // net stream V weak 19:45 05/02 JF
1480 UNID Loop ID ?CBS Radio Network Channel 42? Weak 04:03 06/02 JF
1480 WLMV Madison WI. ?La Movida? heard in pile-up with ?La Movida? ID as per Paul Crankshaw?s recording. Also with ?WLMV Catorce
Ochenta? ID at 05:21 Weak 04:04 06/02 JF
1500 KSTP St Paul MN. ?AM Fifteen Hundred KSTP? ID at midnight! Weak 23:31 05/02 JF
1640 WSKH Sussex WI. Radio Disney // 1650 Weak 03:29 06/02 JF
1650 KWHN Fort Smith AR. ID over Disney Weak 03:57 06/02 JF

Quite an interesting night though a quick scan across the band at midnight didn't reveal anything obviously good to begin with.
Some nice early sundown DX around 19:30 though which fizzled out not long afterwards.

First surprise of the morning was KSTP popping up with a nice ID before midnight!
http://www.skywaves.info/2006/1500-kstp-2331-05-02-06.mp3

Monitoring 1300 from 01:00 revealed two English stations. One talking (not sports), the other on a MOYL / nostalgia format. The
splatter was very bad at times so I moved to 1460 after 02:40. WDDY dominated but there was an English talker in there too. WDDY
dominated at 03:00, 03:30 and 0400 so no ID's there.

Over to 1480 after 04:00 and a strange one ... a loop ID repeating "CBS Radio Network Channel 42" over and over again with a 400Hz
tone. http://www.skywaves.info/2006/1480-unid-0410-06-02-06.mp3 This was mixing with two English north Americans and a lively
Latin music station which turned out to be WLMV.
http://www.skywaves.info/2006/1480-wlmv-0404-06-02-06.mp3 An oldies station was
also present on the frequency playing, among others, the 60's hits "Mony Mony" by Tommy James & The Shondells at 04:11, "Young Girl"
by Gary Pucket & The Union Gap at 05:15 and "I Just Called To Say I Love You" by Stevie Wonder at 04:38.

After 06:00 conditions had taken a turn for the worse with most North Americans disappearing, leaving another Latin on 1480, two
recordings of which are here ... http://www.skywaves.info/2006/1480-unid-0556-06-02-06.mp3 &
http://www.skywaves.info/2006/1480-unid-0627-06-02-06.mp3 Any ideas please?

Quite an interesting night with a disappointing finish!

(Apologies if the downloading / playing of these audio files is slow but I am having serious problems with my hosting company who I
would like to kick very hard)

Good DX!

In reply to my own message ...

Thank you to Renato Brunoi for catching the ID on one of the clip.
This is WMDD "Tropical" from Puerto Rico.

Many thanks Renato, so I can add this one to the log.

Cheers

John

597. Overnight: 07-02-06

Topic: 598 Message: 598

1510 WLAC Nashville TN. "Newsradio15-10 WLAC". At least four or five ID's within a minute! No trace of WWZN! Weak 23:20 08/02 JF

1520 WWKB Buffalo NY "This is Buffalo's Best Talk ☐ WWKB Buffalo" ID after a string of ads from 23:30. new talk format with subtle call change. Weak 23:33 08/02 JF

Not much tonight but nice to catch up with WLAC again after a few years.

Once again conditions were more 'open' around midnight and deteriorated as the morning pregressed. I left Dream recording 1600kHz as there was some Latin activity there at 01:00. A quick tune @ 04:00 revealed nothing of any great interest so I left the rx on 1600. The Latin station was still there playing lively Latino style music with reggae, reggaeton and soca. At a guess this was WLUZ but, despite some fair peaks around 07:00-08:00 it never ID'd, going over the top of each and every hour with back to back music and no speech. This station still ecapes my log.

Solar effects are still very low but the DX continues to struggle around dawn.

Good DX!

599. Ashfield DX Log: 10-02-06

Yahoo group: skywavesmw
Date: 2006-02-10 12:37:23 UTC
From: John Faulkner
Topic: 599 Message: 599

650 WSM Nashville TN. After a fair peak the signal dropped
down for the ID. Classic sountry music Fair 05:08 10/02 JF

700 WLW Cincinatti OH. "700 WLW ID" caught a few times
Fair 00:02 10/02 JF

1440 WJAE Westbrook ME. Ad break mixing Luxy, mentioning
tools and spare parts, WJAB ID v clearly heard with laser style zap
jingle Fair 03:57 10/02 JF

1590 WRXB St Pete Beach FL. ID "The ???? (soul?) Station,
WRXB" v weak in the noise, soul music V weak 03:54 10/02 JF

1600 WGIT Canovanas. "La Gigantic" ID insert between
reggaeton songs Fair 23:14 09/02 JF

A significant improvement in conditions overnight with some
interesting signals. For some reason I couldn't sleep overnight (no,
it wasn't the DX) so I had many short sessions at the rx.

580 was v weak and sounded religious but I believe I heard a CFRA
ID in the mush.
610 had an English station dominant over CHNC. I think I heard
a "WIP" ID. Programmeing sounded like sports.
650 was definitely WSM and not VOCM, also Greenland appeared after
07:00
680 had two (or three?) stations. I failed to ID any of them. :0(
760 sounded Portugusese
870 probably WWL
980 had English and Spanish, possibly the same station around 07:00
1090 WBAL no problems pushing through TalkShite splash
1380 probably WMYF with oldies
1400 another station mixing with CBG
1430 WENE dominant with good signals at times, mixing CHKT
1440 I'm still recovering from the fact I could hear WJAE mixing
with Luxembourg !!!
1470 was dominated by Spanish stations
1490 oldies station, suspect WBAE around sunrise
1500 WTOP and tentative WLQV before midnight
1520 WWKB with good signals throughout the night
1540 CHIN dominating
1550 UNID TA
1580 UNID TA
1590 v weak pile-up
1600 WLUZ? with US talker

1660 presume WCNZ with religion, WGIT and another English station around 01:00

A beautifully quiet band overnight with hardly any noise at all. Long may it last!

Good DX!

600. Skywaves Website Transfer - IMMINENT

Yahoo group: skywavesmw
Date: 2006-02-10 15:41:49 UTC
From: John Faulkner
Topic: 600 Message: 600

Having signed up with the new hosts "Dataflame" today,
(www.dataflame.co.uk) the Skywaves website is ready to be transferred.

This will result in a small amount of downtime while the
DNS records are updated and have had an opportunity to
propogate throughout the Internet. This will take from a few hours
to a couple of days, depending on location.

As of 10-02-06, one week after the initial communication with Web
Mania (six emails and several livehelp chat sessions) we still have
not received any word from them. They are clearly ignorring all
messages.

Attmepts will now be made to recover the fees which had just been
paid for a further year's hosting / domain through them.

We still have no idea what has happened with Web Mania who, until a
few months ago, had always been professional and offered rapid
response to any enquiries.

The new hosts will allow us to develop the new site which has been
under construction for a few weeks and is taking shape very nicely.
Please note that this may not be finished until the spring but we are
working on it when we can.

Many thanks

John Faulkner

This site is interesting to read.
http://www.radiojamming.puslapiai.lt/article_en.htm

See also the Archive documents and watch the jargon of RFE
They used "communists" for the other side.

It is amazing how much sites and power they used for jamming

Jurgen

820 CM.. R Reloj, 2 possible sites. Time pips, "RR"
morse ID, etc. Weak 01:30 11/02 JF

820 Trinity Broadcasting Company, Charlestown,
Nevis. Usual nauseating religion, well bless
the lord! Weak 02:00 11/02 JF

1320 WDER Derry NH. Promo: "Truth For Life with
Alistair Begg at 7:30 here on Life Changing
Radio", their website confirms
this, then the WDER Weather Centre .."
UK FIRST! Weak 02:34 11/02 JF

1540 WDCD Albany NY. "The Life 15-40 live programme crew
online today at 1540wdcd.com" ID. Christian
format Good 02:26 11/02 JF

Fairly poor conditions here, deteriorating around suinrise once again
but with one or two semi-interesting things happening. 1320
WDER was a very nice surprise. Plenty of stuff happening around
local midnight but not many great strengths, apart from WDCD which
was romping through at 02:26. Even 1520 WWKB was not particularly
strong. A few other interesting channels revealing stations but
never strong enough for any clarity.

Good DX!

Imagine what kind of feeling you must have had as an employee. Normally you're glad that you do something positive for the people. But here you work for something that people prefer to have switched off. Unless you're convinced you're doing the right thing.

Jurgen

790 CMAQ R Reloj, Pinar del Rio. Morse and time pip at toh Weak 07:00 13/02 JF
790 WAXY South Miami FL. Westwood One programme "on 7-90 WAXY South Mami" ID at toh Fair 07:00 13/02 JF

Arrived home rather late this morning. Started recirding 790kHz from 04:15. ID's were difficult and everything faded down at the
wrong time. There were several stations on the frequency. Newfoundland weather probably meant CFNW but, again, no ID. Only
managing the easier catches WAXY and CMAQ.

I have a recording of a possible Spanish W--- ID on 1410 which may amount to nothing. http://www.skywaves.info/2006/0414--13-02-06.mp3 W call at 20 seconds.

Other than that, one or two good signals but only from east coast regulars, particularly 1510 WWZN.

Good DX all!

Good DX!

611. QIP: Now 50.000 qsl logs from 10.000 stations

Yahoo group: skywavesmw
Date: 2006-02-13 13:25:35 UTC
From: Martin Schoech
Topic: 611 Message: 611

QIP: Now 50.000 qsl logs from 10.000 stations

I'm very pround to tell all qsl-card-collectors, that the

QSL Information Pages for BC-DXers - QIP

at http://www.schoechi.de/qip.html

now contain more than 50.000 qsl logs from more than 10.000 BC radio stations from around the world. These logs come from 241 different 'radio-countries' plus 46 different clandestine radio target areas. Included are qsls from LW, MW, SW and FM radio-stations. QSLs from pirates and from utility stations are not included (the only exeptions are those from time signal stations and from the Japanese lighthouse stations). The majority of the qsl logs is from 1996 until today.

These logs exists in 2 versions

- MS Exel files for all large world regions (only av. for subscribers)

- HTML pages for all visitors of the page (the zipped versions of these HTML-pages (for an easier and faster download) are again only av. for subscribers).

The subscription price in 5 EUR or 6 USD for 2 years. I prefer payments via Paypal (no credit cards please!). Other payments to my P.O.Box please.

I'd like to thank you all DX Clubs and all individual DXers for their support of QIP in the last 8 years! Please continue to send in your qsl logs to me. Contributors know that they get access to some MS Excel files as a thank you for their contribution.

yours
Martin from Eisenach

550 CHLN Trois Rivieres QC. Phone-in. Evening service // 730 CKAC
Weak 01:23 14/02 JF

690 CINF Montreal QC. Presumed in French, pushing past BBC 5Live
Good 09:00 14/02 JF

730 CKAC Montreal QC. Phone-in. Evening service // 550 CHLN
Fair 01:23 14/02 JF

800 CHRC Quebec City QC. Presumed in French possibly // 690?
Fair 09:01 14/02 JF

1660 WWRU Jersey City NJ. Legal ID "WWRU Jersey City New York 1660
AM WWRU" then prog in Korean? Fair 03:00 14/02 JF

A French morning here! CHLN and CKAC were clearly in //. Not so
sure about CINF and CHNC. They seemed to be parallel but the
splatter from 690 made CINF reception rather difficult. Quite a
decent signal when 5Live paused for breath though!

Toronto was in evidence from 22:00 on the usual channels so I tried
1500 for WLQV but only heard WTOP.

Good DX!

1590 XEVOZ R Reloj, Mexico City. Many ID's, generally dominant in pile-up. Weak 07:18 15/02 JF

1600 WAAM Ann Arbor MI. ID at top of the hour "Talkradio 16 Hundred WAAM". Weak 08:00 15/02 JF

1630 KRND Cheyenne WY. Presumed, Spanish programming over a presumed KCJJ. No WRDW. Weak 07:30 15/02 JF

I made a substantial improvement to the directivity of the ewe antenna yesterday evening. I wonder if anybody else has noticed this rather odd effect ... While tuning the null with the variable resistor I noted that, by holding the metal casing of the base of the resistor in my hand, this somehow moves the position of the null but also makes it much deeper at the same time. I assume I am providing some kind of additional earthing (?). I have now connected the metal casing of the resistor to the earth rod. I don't undertand why this should have any influence though.

This has resulted in an improved null across the band. I could hear WJAE mixing with Luxembourg again on 1440 this morning. Odd that this system can remove some high power Euro-nuisances and not others. Belgium 540 and 927 are still unshiftable but I can hugely reduce the mess over 930 now. Holland 1008 is taken right out, as are the Germans on 972, 1260 & 1422. I hear WZAN every night now on 970 as a result. 750 also has easy access as the Dutch station on 747 is now removable.

I recorded 1600 overnight as it is somewhat clearer since the above mod. Signals were rather weak but French dominated the channel around midnight, WXTO ? A lively Spanish station put in regular appearances for most of the morning. There was a tentative ID of Radio Luz. The big surprise here was WAAM at 08:00 - a personal first! WMNE was present too.

1410 and 1420 are also much easier, both channels revealing audio and both with a combination of English and Spanish stations.

I slept through until around 07:15 and found only the top half of MW producing any decent TA signals.

The X band was a little better than usual with a presumed KCJJ (English pops) and KRND (Spanish). This would be the first time I have heard Cheyenne from home. I can't see who else this could've been in Spanish.

1590 had a pile-up with ESPN, Mexico and others.

Good DX!

It seems that you added a small capacitor in parallel to the resistor, thus terminating it with some reactance to get the phase right to optimum.

This leads to this: Try a variable capacitor in parallel to the R, but this will he highly frequency dependent. Thus requires a remote control for R & C .
Also try C and R and series that then is in parallel to the existing R

Interesting observation

Wonder if this works for a beverage also?

Jurgen

620. RE: [skywavesmw] Ashfield DX Log: 15-02-06

Yahoo group: skywavesmw

Interesting Jurgen. I will try this with another VR and/or VC, hopefully tomorrow as I am in the process of moving the ewe to a more permanent and slightly less visible position with slimmer suports.

The tuning really needs taking indoors. I have a small rotator motor somewhere which I could physically attach to the spindle of the variable resistor.

Thanks

John

From: John Faulkner
Topic: 566 Message: 621

Web Mania have continued to be a pain in the arse, ignoring my emails and refusing to respond to my requests for an authorastion code so the transfer of the Skywaves domain can take place. If it wasn't for my compaints to InternNic, the Skywaves domain registrars, and their intervention, we would not have got anywhere at all. Thankfully, today, InterNic issued me with the authorisation code which I immediately passed to Dataflame. They state the transfer will take place in the next five days.

Hopefully, this will be the conclusion of the matter. This has been a rather complicated and frustrating affair which I now hope I have seen the back of.

Nothing is simple anymore.

From: John Faulkner
Topic: 630 Message: 630

Firstly, could the person who posted the computer modelling diagrams of the ewe antenna here a few weeks ago please repost them (the one which looked like a baloon in which someone had stuck a finger in the back)? This post never arrived in my inbox and I can't locate it on the Yahoo page directly. I'm informed that one was posted!

Also to ask another question regarding the modelling ...

What would happen if either one of the vertical components of the ewe were raised in height slightly or lengthened? I wondered if it would have any effect on the height of the rear null?

Thanks

John

633. Website Conclusion / Dispicable Web Mania

Yahoo group: skywavesmw
Date: 2006-02-21 11:09:40 UTC
From: John Faulkner
Topic: 633 Message: 633

We have been forced into a compromise with the website situation. Following FIVE hours internet chat / email writing and phone calls yesterday, it was clear that the evil that is Web Mania were not going to release the skywaves.info domain. They have no right to do this, but WHY?

It had been suggested that there were financial incentives for them to hold on to the domain. Following yesterday's incidents we have to consider this but it's up to you all to make up your own judgement.

Apparently, we are at the beginning of another domain boom, where asking prices for certain domains command hundreds and sometimes thousands of pounds, at least that's according to a BBC news report a few days ago. I located our previous skywaves.co.uk site, now hosted by another bunch of re-selling, money grabbing bar stewards it would seem, for which the asking price is a very reasonable £495 + VAT plus £30 transfer fee. Hmmm, this price would be less than tenner if it were still freely available! Single word domains are fetching high prices. Three or four years ago I was offered £1000 for skywaves.co.uk by an American company. I rejected their kind offer, only to find shortly afterwards that we had to let this domain go due to the conditions and higher fees involved with freenetname. The transfer fee alone was £94 as it needed to be hosted elsewhere. So, our domain name is big business! Little wonder perhaps then that Web Mania were reluctant to release it.

The compromise is that I have been forced to renew skywaves.info with Web Mania and a further year of their hosting. Meanwhile, a new domain has been purchased which will be entirely hosted at Dataflame. The .info domain will continue for at least another year, possibly longer, unless it suits is to keep it going or we can get Web Mania to release it. There will be a simple re-direct to the new domain in the near future. Since we are now with Dataflame we can develop the new Skywaves website which will bring a whole new world of interactivity to the club.

Many thanks to Lynton who joined me for three hours yesterday evening in trying to sort a way through this minefield. For your interest, other obstacles incuded the tackling of on-line forms which refused to accept phone numbers and / or email addresses. There have always been problems with the .info suffix of my email address on some registration forms. Even though some of the forms gave examples of how to input my (required) phone number, i.e. +44.1623xxxxxx, two of them refused to accept it in this or any other combination of digits.

So, I *think* the problems are sorted, albeit in a different way to the one we wanted.

This has been a very frustrating three weeks.

From: John Faulkner
Topic: 587 Message: 634

Not much heard overnight. Catch-up-on-sleep time!

930 had a weak CJYQ around midnight, 920 had CJCH but that was about it from North America. V weak traces of WWZN 1510 and WWKB
1520.

1390 had a couple of Latins early in the morning but I opted to .I recorded 1480 overnight. WMDD Fajardo dominated here but it was
quite weak. I think English was trying to creep back in here by 08:00 but it was just too weak to be certain.

1470 seemed to have activity but it was mostly obliterated by our neighbour's dimmer switch which cause minor probelms to a few
channels at the top of the band. It's more irritating than anything else.

Good DX!

637. Conditions and UNID's

Yahoo group: skywavesmw
Date: 2006-02-23 11:06:26 UTC
From: John Faulkner
Topic: 637 Message: 637

Conditions to North America seemed to be recovering around midnight but deteriorated soon afterwards. Nevertheless I managed to ID
WLW on 700 at 04:00 despite this.

If only I could've ID'd more on this channel. There were several station. Hymn singing and English was noted occasionally between
00:00 and 02:00, RJR? As were one (possibly two) Spanish stations and a Brazilian. The Brazilian faded up to fair, perfectly clear
levels around 04:45 but no IDs were forthcoming. just an OM speech ...
http://www.skywaves.info/2006/700-unid-0444-23-02-06.mp3 I
don't think there are any clues here though.

A Spanish talker took over the channel briefly at 02:35 with a commercial, I think Argentina was mentioned.
http://www.skywaves.info/2006/700-unid-0235-23-02-06.mp3 I will try and obtain a second opinion on this. There appears to be a
"radiotelevision" ID at the beginning.

A station of lively Latin rhythms appeared just before 07:00 but went over the top of the hour with no break for ID.

All in all, quite an interesting channel.

Good DX!

638. ***** New Skywaves Site - now ONLINE !! *****

Yahoo group: skywavesmw
Date: 2006-02-23 19:38:13 UTC
From: John Faulkner
Topic: 638 Message: 638

I can't believe we have been forced to do this but, thanks to those nice people at Web Mania, we have had no choice but to safeguard the future of the website with a new domain. Quite what is going to happen to the existing .info site in the future we do not know.

More problems with domains and hosting have been encountered in the last few days and we realised there were potentially serious problems ahead if we did not act immediately. The .info domain could have disappeared at any time, particularly as we had received a refund for this. A decision was made to buy back .info in order to stop Web Mania profiting from its sale and a new domain was purchased. The idea is to hang on to .info for another year at least.

Meanwhile enquiries were made about the cost of the .co.uk site we used to have, now owned by a domain reseller. They asked for £495!

Please redirect your browsers to www.skywaves.biz from now on.

The home page at .info has an auto-redirect.

Thanks to Lynton for the immense amount of work he has put into sorting this. Our frustrations are now at an end.

From: John Faulkner
Topic: 639 Message: 639

780 CFDR Dartmouth NS. Presumed with God & Jesus stuff and no IDs top or bottom of hour. Mixing with another English station
with muffled audio. ZBV1? Good 01:00 24/02 JF

800 PJB TWR, Bonaire. "You are listening to Trans World Radio" ID at 02:00. God has a resurrection! Good 02:00 24/02 JF

930 CFBC St John NB. "93 CFBC" ID, clear and alone on CJYQ fade. Fair 00:00 24/02 JF

A lively band. Lots of South Americans coming through. Nice to get TWR on 800 after many years absence from my log. Just a guess
about ZBV1 on 780 but who else could've been carrying English here at this time? Conditions did not seem approporaite for WBBM and,
whatever it was, was quite subdued and muffled. Almost equal levels to CFDR at times.

I'm away for a couple of days now so no more listening for me until Monday morning.

Good DX!

642. Het 1250

Yahoo group: skywavesmw
Date: 2006-02-26 16:56:22 UTC
From: John Faulkner
Topic: 642 Message: 642

I have been hearing a heterodyne on 1250 kHz for the last two or three weeks. Without taking any precise measurements I estimate
the approximate frequency is 1249.5.

The signal is variable and never particularly great, but sometimes just strong enough to hear speech. Too weak to identify the
language, however.

It's an odd offset and I'm surprised nobody else has reported it. I have always assumed it to be South American but I really have
no idea as it's only been heard whilst DXing overnight , i.e. I haven't checked during the early evening to see if it's Africa or
European.

Maybe somebody somewhere knows something!

From: Joop Prosée
Topic: 643 Message: 643

Vy Gd Day 2 all :

At last my messages are no longer bouncing for the MW-group !

My question to all of you : Is there someone who can tell me
where the 846kHz TX is originating from, that is constantly
broadcasting country-music without any spoken words in between ?

I've listened to this particular TX, without ever hearing the
slightest announcement, for many nightly hours.
My suspicion is, that this TX originates from the British Isles,
but 180° to the other side could also be possible (Germany !).
Never hear any gospel-mx, so "GOSPEL 846" from Ireland seems
not very likely to me !
This 846kHz-TX is not receivable on a constant basis, so I
presume a considerable distance between this TX and my QTH.

Is there anybody with the answer on this question of mine ??

From: John Faulkner
Topic: 642 Message: 645

Just had a reply from Alan Merriman of the MWC regarding my station on 1249.5, who seems ot have the answer! It appears to be WKBR
in Manchester, New Hampshire.

Just done a search on this on Google and there are several articles about WKBR being 1/2 kHz off frequency! Reading the articles
reveals that this has been on and off frequency by this amount for a few years and, believe it or not, I actually visited the
station's studio's back in 1991 and have a photo and the proverbial T shirt to prove it! Just need an ID now!

Tune to 1250 anytime after midnight (during better conditions than we have now, preferably) and you should hear a 500Hz tone on the
low frequency side.

John

Hi Joop,

I've heard rumours this may be a pirate based in the republic of Ireland.
There's no mention of an allocation on 846 in last years radio listeners guide so that may go some way to confirm that.

There was also a pirate relay of Radio Caroline's satelite service on 1593 for a while, running around 2 KW. I often received it weakly here in Birmingham during hours of darkness on my sony portable. Not heard it or seen it logged for a while now though.

From: John Faulkner
Topic: 648 Message: 649

Alan Merriman has come to my rescue again! Alan informs me that WKBR do indeed carry ABC news, according to the current NRC log!

This was such a long-shot as I never expected the current conditions would lift sufficiently to enable me to receive WKBR. I took a
gamble and I guess it paid off! :0)

This has to be WKBR I had despite there being no ID as everything else would appear to point to them, particularly the offset!

http://www.skywaves.biz/2006/1250-wkbr-0500-27-02-06.mp3

There are three short recordings all processed alongside each other.

First part: 0:00 > 0:17 is the speech heard over the top of the hour at 05:00.

Second part: 0:18 > 0:28 is a femnale news correspondent saying "[name], ABC News" at 0:20 (leading up to 05:02 GMT)

Third part: 0:29 > 0:45 is more speech after the female correspondent after 05:02 GMT. Not sure if a commercial or more news.

You should listen under headphones, ideally.

Cheers

John

Hi, I was wondering if you would be able to post this message to members of your group please. I'm a researcher on a BBC Two series and we are trying to reach out to as many people as possible across the country with this amazing opportunity. Please read on.

Best wishes,

Phil Hall

Researcher

Extreme Dreams

Ricochet for BBC Two

A new BBC Two documentary series, Extreme Dreams, is scouring the UK for people (age 18-60) interested in challenging themselves. We are taking members of the public on adventures of a lifetime and it would be great to get the word out to people through your discussion group. We have 4 trips planned and we are looking for 5 people per trip. Each trip will be to an extreme and exotic part of the world and will being visiting such remote places as the South American jungle, the Arctic, Mount Kilimanjaro or a desert environment for example. We are looking for people who have maybe had a challenging time in their life and feel this trip would be good for them at this moment. If you think this is you then contact us using the information below. Go on, give it a try.

Ricochet, the makers of TV's `Supernanny', are making a new series for BBC2 and are looking for people to go on ..

THE TRIP OF A LIFETIME!

Would you like to get away from it all? Are you looking for adventure?

Maybe it is time you did something for yourself?

Ever dreamed of climbing a mountain?

Trekking in extreme locations?

Whatever it is we want to hear from you!

Please call the Extreme Dreams Team on 0870 490 9764 or email extremedreams@... to find out more.

654. Website / Domain Update

Yahoo group: skywavesmw
Date: 2006-02-28 13:49:18 UTC
From: John Faulkner
Topic: 654 Message: 654

Web Mania are being really silly again (note the politeness here!) and have apparently released the Skywaves domain. This morning
Dataflame informed me that www.skywaves.info has now successfully been transferred, even though we have not asked for this since
PURCHASING it for another year - the idea being we can use it for forwarding to www.skywaves.biz

They are making me really, really cross. We now have no auto-forwarding from the old domain and as a result none of the original
@... email addresses work anymore. *** So all members and editors who still rely on their @... addresses, please
note they no longer work ***

What on earth are those wicked people at Web Mania doing? Oooooh! Grrrrr! (Can I kill them?)

John

655. Hello from a new member in Peterborough

Yahoo group: skywavesmw
Date: 2006-02-28 14:22:29 UTC
From: Chris Monk
Topic: 655 Message: 655

Hello,

I have just joined today and thought I'd introduce myself.

I started off my interest in radios by tuning across the bands of my grandmothers Marconi radio back in the sixties.

I then used my parents PYE Cambridge valve radio to listen to the shortwaves.

Once I got my own radio I used to listen to the 49 metre band and then discovered the Radio Sweden broadcasts to Europe on 1179 and became a big fan of the Saturday Show.

In the eighties I bought a Yaesu FRG 7700 and got into broadcast and amateur DXing.

More recently I've been using a Sony ICF 7600D, having sold the Yaesu years ago to go bicycle racing. Something I now regret doing having renewed my interest in radio listening.

I shall have to save up for a second-hand receiver and put up an external long-wire aerial.

All the best,
Chris

Hi

at 0640z I'm hearing a station playing a science fiction movie soundtrack
(almost no music, only the voices of actors).

Definitely no Virgin island calypso.

What is it ? it sounds like Startrek

Hi

I came up with a unid station on 1620 khz this morning.
I first thought that it was not WDHP as there was another dim station in the background that was reminiscent of the soft music that is customary on WDHP.

The programme (UFO's , science fiction, film soundtrack) brought TalkStar programme to Gert Nilsson's mind.
Following his suggestion, I listened carefully to the tape and isolated the network ID "talk star radio network" (here attached).

Problem is I found no evidence on talkstar webpage that WDHP is one of their affiliates.
Also WDHP website does not list this show in their weekday schedule before and after midnight Local Time.

Has someone got a clue ?

There's still a high chance Gert's theory is correct and WDHP is the culprit ...

Thanks to you all.

Sorry, I thought you were making a guess, I did not assume that you had
heard both IDs.

only wanted to broaden the question..

Thanks for your help.

664. Conditions

Yahoo group: skywavesmw
Date: 2006-03-02 19:18:18 UTC
From: John Faulkner
Topic: 587 Message: 664

"The geomagnetic field is expected to be quiet on March 2-6" says Jan Alvestad on his daily solar report www.dxlc.com/solar Let's
hope so.

Despite continuing low solar activity there is very little in the way of transatlantic DX on medium wave at the moment. This is
probably not unusual as February is a notoriously poor month for tranatlantic DX. As we get into March things should improve
substantially as we approach the vernal equinox.

For the last few days only a few of the more regular east coast North American stations have been heard around midnight and with
mostly weak signals. This reception tends to deteriorate as the morning progresses.

I recorded 1250kHz this morning (2nd) and heard a rock station at 03:00. There was no conclusive ID but it is very unusual to hear
rock music as an AM format these days. I suspect that, whoever it was, may have been relaying an FM service.

WKBR 1249.51 contunies to cause a hefty het with 1250. I'm still trying to get a positive ID on WKBR.

Good DX!

John

665. Are You Geting WKBR?

Yahoo group: skywavesmw

From: John Faulkner
Topic: 665 Message: 665

http://www.skywaves.biz/2006/499hz.mp3

The above is a 499 Hz sine wave I generated in WaveLab. How about we try a test to see who can get this and report back in the
tomorrow.?

WKBR Manchester, New Hapshire has been noted off freqneucy in recent weeks, normally on 1250kHz it has slipped down 500Hz and can
now be found on 1249.5. I have measure this and find the exact offset to be 499Hz low, so 1249.51, thus producing a 499Hz
heterodyne when tuned to 1250 in lsb.

How many other DXers can hear this? If you listen to the file above you will find out eactly what note you should be listening for.
Even though the signal of WKBR may not be strong enough to hear audio, it is surprising how well the heterodyne can be heard.

So can YOU hear it? Check around local midnight to sunrise.

Good luck!

John

Hello Richard,

I've started listening again on the Sony 7600D to Radio Sweden since Christmas. It's a shame they cancelled the Saturday Show after all those years of poking fun at ABBA etc. I tried using the external antenna socket with my long wire antenna with mixed results.

I bought my Yaesu FRG 7700 and 2 metre converter whilst at college in Cheltenham. I made friends with three GCHQ employees who were amateurs and they made me a loop antenna, a slim jim 2 metre antenna and a wooden boxed antenna tuning unit. I used to throw a long wire out of my bedroom window onto nearby flat roofs. I became a fan of a group on 3680mhz on the 80 metre band who were informal and idiosyncratic to say the least. They included Harry G3MVF and George GW3DIX.

In a moment of madness I sold the Yaesu after being here in Peterborough for a while to pay for a road racing bicycle. I miss it now that I have less time to train for time trials on the bike. I used to enjoy tuning in all sorts of broadcast and amateur signals during the long winter nights. I am saving up for a secondhand Yaesu, Icom or AOR receiver, hoping one will come up through my contacts with the local amateur radio group.

All the best,
Chris

www.skywaves.info is back online! The transfer from Web Mania to Dataflame is now compete and the new skywaves.biz auto-redirects to skywaves.info

All the original skywaves.info email addresses should now be working again.

So, it's 'back to normal' after what has been a very frustrating 29 days. The final task is to obtain a full refund from Web Mania, which they are refusing as they are telling me they cannot make a refund on a domain which has 'expired'! (?) This company have really tried our patience over the last four weeks, but we have finally achieved our goal. At last, we are rid of this scummy firm.

Business as usual folks!

:0)

Interesting one David. I have approached them today with a very firm letter. They *should* refund 100% as they have no legal right
to hold on to the money. The events this week clearly show how unprofessional and vindictive they are with a will to dispupt things
for us. Hard to believe isn't it?

I am extremely impressed with the way DataFlame have dealt with the fallout from these problems. Much correspondence has been
necessary with DataFlame involving requests to change settings, domains, forwarding, etc., you name it! They have been very
understanding, helpful and thoroughly professional throughout! You can see the level of professionalism from the pages of their
website.

Now everything is finished we have full control over what happens to the domain ourselves in future. We can unlock it, etc. via
their control panel. Also I am stunned by the facilities that are available in this contrrol panel. The stats are incredibly
detailed too. Web Mania's control panel was a joke. What few pages of stats and information they had was usually headed with a
phrase of something like "more detailed web stats will be available soon" but this never changed in all the years we were with them.

My business site, which is also hosted through Web Mania, has also experienced some downtime. I need to keep a close eye on this.
For now I regret I will have to leave it with them to avoid any complications but when the renewal is due I am moving it elsewhere,
probably to DataFlame.

I may publish a full account of the everything which has happened with Web Mania over the last four week's on the website.

It's great to know everything is back to normal.

Cheers all!

John

You may wish to move it away (just) before the renewal comes around
... often there is a period after a renewal where you can't
transfer/move a domain.

A good point Mark, thanks for this. Problem is I will still need an EPP code from WM to pass to DF in order to do the transfer. I will see if I can get OnLineNic to do the necessary behind WM's back. Hmmm, just checked and the status of my other site is currently LOCKED. More fun ahead!

John

Skaface558, Tim Bucknall & Julian Hardstone,

Many thanks for your info concerning my remarks about
the 846kHz TX. Just as my own thoughts the reaction of
the three of you points towards Ireland as QTH for this
(pirate) TX.

Sorry for my late reaction, but I wasn't able to come on
the internet, because of a thoroughly redecoration of our
kitchen and living room last ten days, the internet connection
was disconnected for several days !!

JOOP.

1090 WBAL Baltimore MD. OM with clear WBAL ID in 5Live splash,
then female correspondent. Good levels!
Good 2357 05/03 JF

1370 WDEA Ellsworth ME. CBS News. WDEA ID then nostalgia
Fair 0006 06/03 JF

1420 YVNZ R Marabina, Maracaibo. "En Marabina Catorce Viente ...
[something Spanish] la radio de zulianos, [something else
Spanish] los cuarenta y ocho minutes (? or maybe not) ID
and lively LA music. My Espanol esta not good.
Fair 06:48 06/03 JF

1430 WENE Endicott NY. "Sportsradio 14-30 The Team" Dominant in
NA pile-up Fair 02:30 06/03 JF

1440 WJAE Westbrook ME. Sporting new radio. Dominant north
American. Luxembourg off air! "The Big Jab, WJAB" ID
and "Sporting News Radio network for central Maine".
Good 0018 06/03 JF

1440 WHKW Warren OH. "Warren" and "WHKW" ID heard in mess on the
half hour. Christian religion. Often equal levels
WJAE. Weak 00:30 06/03 JF

The big surprise tonight (apart from much better conditions) was that
Luxembourg 1440 was off the air! A pile of North American
stations were audible here, dominated by WJAE. Also heard on 1440
were another sports station (WVEI ?) and a station playing
oldies.

At 04:00 I had a R&R / blues station on 1430 with programme ending.
There appeared to be an ID but it was too weak. CHKT was right
at the back of the channel while this was happening and WENE had
taken a fade.

A talk station on 1420 eluded me, though I am pretty certain I heard
a "WBSM" ID on the channel at the top of one hour. It wasn't
clear enough for my liking. CKDY was probably the C&W station
dominating the channel, but they both got obliterated after 05:00
when R Marabina took over. Marabina is a personal first. I am
looking forward to hearing a lot more on 1420 now I can get in on
the channel with reasonable ease.

Good DX!

the 70's" Weak 06:36 09/03 JF

1330 WRCA Waltham MA. End of programme, then ID "The preceding
programme has been a public affairs presentation of
WRCA" Weak 06:29 09/03 JF

1380 YVNG Ondas Del Mar, Puerto Cabello. Several IDs at toh
Weak 02:00 09/03 JF

1400 WOND Pleasantville NJ. Top of hour ID, "WOND
Pleasantville, Atlantic City" mentioning WUSS 1490 in
ID too Weak 23:00 08/03 JF

1460 WDDY Albany NY. Radio Disney // 1560
Weak 06:15 09/03 JF

1600 WMNE Riviera Beach FL. Radio Disney // 1560
Weak 06:15 09/04 JF

Transatlantic conditions were much more stable last night.

Brazil was also present on 740 and 750 kHz (possibly also 760). 740
and 750 peaked to fair levels prior to midnight.

750 and 1380 were quite busy channels:

750 had WSB and CBGY, the Brazilian plus a tentative R Caracas from
Venezuela.

1380 had nostalgia and two Latin stations. WSYB possible ID heard in
here too at 02:00 but inconclusive. At 04:19 a sports station took
over the channel, the Chicago White Sox being the dominant subject,
possible a sports commentary.

It's an inverted "U" antenna and has nothing to do with sheep! The article Cyril posted looks very similar to the one on the dxing.info site which has some useful diagrams. This is the one I referred to when I built my ewe antenna.

Prior to using the ewe I have mostly used a phased loop / longwire configuration for medium wave, consisting of a Wellbrook ALA1530 and a 200' longwire which runs down a path at the back of the house. The two aerials were mixed together through a home made control box where the phase and amplitude of the received signals from each wire were adjusted and mixed together to produce a null in the required direction, the idea here being to remove European signals and leave the path open to the Americas. The phasing system produces very deep nulls but in only a very precise direction, so it would be difficult to null European signals if there were more than one, each arriving from different directions. I could remove my local 50dB Clipstone transmitter from 1071 and 1583 completely with the phasing syetam! With the loop / longwire system you need to retune the control box for each frequency and the null can be difficult to tune. These points and the very narrow null width make it a little awkward to operate but it has its uses.

The ewe antenna produces a similar kind of unidirectional pattern but it has a much wider front beam and a much wider rear null which is positioned partially skyward. This makes it easier to null skywave signals at night. This way I can eliminate signals from Holland and Belgium, for instance, which the phasing system would struggle with. The overall nulls of the ewe are not so deep but they don't really need to be. 20dB is usually adequate. The added selectivity produced through the Dream software usually means I can shift away from any remaining European splatter. Also, the ewe antenna nulls are wideband, so if you set the null for the top of medium wave the null will be just as good at the bottom of the band. Not only for medium wave but also long wave and right up into the tropical bands. No fine tuning is necessary when changing frequency as with the phasing system.

My ewe antenna is pointing at 290 degrees but is still good for hearing stations in south America. I can sometimes reduce co channel European signals to render transatlantic signals audible too. I have heard WJAE in Westbook, Maine on 1440 for instance - with Luxembourg still on air!

Both antennas have their uses, but for simplicity and effectiveness, the ewe takes some beating.

Good DX!

John

Topic: 687 Message: 687

Scientists Issue Unprecedented Forecast of Next Sunspot Cycle

March 6, 2006

BOULDER□The next sunspot cycle will be 30-50% stronger than the last one and begin as much as a year late, according to a breakthrough forecast using a computer model of solar dynamics developed by scientists at the National Center for Atmospheric Research (NCAR). Predicting the Sun's cycles accurately, years in advance, will help societies plan for active bouts of solar storms, which can slow satellite orbits, disrupt communications, and bring down power systems.

The scientists have confidence in the forecast because, in a series of test runs, the newly developed model simulated the strength of the past eight solar cycles with more than 98% ACCURACY! The forecasts are generated, in part, by tracking the subsurface movements of the sunspot remnants of the previous two solar cycles. The team is publishing its forecast in the current issue of Geophysical Research Letters.

"Our model has demonstrated the necessary skill to be used as a forecasting tool," says NCAR scientist Mausumi Dikpati, the leader of the forecast team at NCAR's High Altitude Observatory that also includes Peter Gilman and Giuliana de Toma.

689. My wife wishes to destroy my hobby

Yahoo group: skywavesmw
Date: 2006-03-10 15:16:39 UTC
From: John Faulkner
Topic: 689 Message: 689

We are decorating our youngest daughter's bedroom and Linda wishes to swap the existing light switch for a rotary dimmer. You can
imagine how this filled me with dread and I'm sure she noticed the colour drain from my face when she made the anouncement a few
minutes ago. I politely pointed out that the noise it would produce would wipe out the entire medium wave band. Our neighbour has
one of these and this too causes interference every night, though it isn't usually a problem, depending on what setting they have it
at.

Linda, who *detests* my radio hobby is now looking rather gleeful at the thought of destroying my late night listening. Short of
moving out, I am hoping there is an alternative to the buzz-inducing dimmers you buy from places like B&Q. Please, please, PLEASE
someone tell me there is a good alternative type of dimmer switch out there which DOESN'T cause intreference.

Fingers crossed so tightly they hurt.

John

She won't buy that one Julian. Thanks anyway.

I understand there are some better quality dimmers which do not cause
interference to radio and audio. I have looked on Maplin but never get
anywhere with their web search. Does anybody know where I can get
these dimmers? I need one urgently. Preferably five minutes ago.

My wife is on her way to buy one in the next hour.

Thanks

John

All electronic devices must carry the CE sign, with that the manufacturer states that the device does not generate interference above limits defined in a EN standards. If it does not comply, he could be forced to take his devices from the EU market. However some EU countries don't do sporadic checks, so that often non-EU made products carry the CE but don't comply. I suppose EU-made products comply better, because the risk of getting banned is higher. Also his competitor will quite likely notice the regulator of non-compliance. But the German c't magazine did measurements on PCs and found that many don't comply and nothing happened.
So I would buy a dimmer made in a EU country, chances are higher that it will be quiet.
Don't forget the switched power supplies as used in PCs etc. really were enormous pests. But nowadays with the CE they are no problems anymore.

Return the dimmer when it does not conform, and buy another one.

Jurgen

693. RE: [skywavesmw] Re: My wife wishes to destroy my hobby

Yahoo group: skywavesmw
Date: 2006-03-11 15:44:04 UTC
From: John Faulkner
Topic: 689 Message: 693

Thanks Jurgen

I wil reply with the same post I made to the MWC earlier today. (I posted the same message in desperation to them). Saves time here.

I have had quite a few suggestions now regarding which types of dimmer to buy and where from. I might try Screwfix as there is a
model there which someone has recommended as being electrically quiet. Failing that I could approach my work for studio quality
dimmers as they will doubtless use them throughout their studios.

Maplin don't seem to know anything about them.

Interestingly, I have learnt this morning that it was not our daughter who wanted the dimmer, but my wife, who it wishes to cause as
much hassle to my hobby as possible. As I have said before she HATES the hobby and everything to do with it. Sadly, domestic
matters are not good here and we are both suffering severe stress through rather demanding jobs - our main problem. It is possible
that I may seek alternative accommodation in the future, though I have actually been considering this for the last few years.
Naturally I will have to delete this (and related) messages from my inbox. Thank you all for your help. I especially need
something like this hobby at the moment, though it's not as if I devote a lot of time to it these days. I record stuff overnight
then play through key points of the recording the following morning. This takes me only a few minutes, then I'm back to my work.
So if I disappear off the face of the earth for a few days you'll know why. But I might just return from the west coast of Ireland
or somewhere westerly! Everybody needs a hobby!

Cheers.

John

So you see, the stresses and strains of daily life continue to take their toll here. I might not be in a hurry to do many things these days. Some things take priority. In my mind that's work and DX comes a close second (whenever possible).

If I have been acting a little odd lately, please bear with me. I am not myself. (so who am I?)

Web Mania (the shetbags) still haven't refunded the money as they promised. This amounts to around ?60 of the club's money. That's YOUR money. Would anybody like to take this on for me? They need a good slapping! Unfortunately, they still holst my work's site and I really dread what's going to happen when

that site/hosting is due for renewal.

Thanks

John

From: John Faulkner
Topic: 699 Message: 699

Poor conditions overnight. Nothing much was heard on 1490 until 05:00 when two nostalgia stations appeared. There were no apparent
IDs at the top of the hour but one of the stations was carrying USA Radio Network News. A possible WUSS ID was heard about two
minutes into the bulletin. I have not heard USA Radio Network News on WBAE and it wasn't heard via WBCB yesterday.

Other than that I caught IDs from 1010 CFRB and 1490 WEGP. 1400 CBG was at good levels around sunrise. Nothing much else was
around.

1400.01 Harbour Light of The Windward Islands, Carriacou.
Presumed with heavily ranting preacher. Noted between
2300 - 0030. Fair 2319 16/03 JF

Conditions seemed quite poor again but the occasional goodies are
still getting through.

By the way - 1490 WBCB *do* carry USA Radio Network News so it looks
like I may have received them again last night.

Good DX!

John

701. Car Reception / Ewe Characteristics

Yahoo group: skywavesmw
Date: 2006-03-19 13:15:23 UTC
From: John Faulkner
Topic: 701 Message: 701

Car Radio Reception:
It was another of those late nights for me. Daybreak had almost arrived when I got home this morning and I was listening to WWZN
1510 on the car radio as I drove home across the Peak District (standard car radio and whip). Yet when I arrived home and tuned in
on the AR7030 and ewe antenna I struggled to hear WWZN at all! Conditions had blown out with some K5's and a 6 overnight.

Ewe Antenna:
I am puzzled by the ewe antenna's reception characteristics. It doesn't seem to perform like a longwire or loop. Maybe a bit more
like a beverage perhaps? The beverage has a lower angle of reception compared to a longwire or loop. The ewe antenna is a vertical
antenna, (yes?) It has two vertical elements which are co-phased to produce a null. I don't know what part the horizontal element
of the ewe antenna plays, but its reception is somehow 'differentl to that of the loop or longwire. I have heard more distant
states this season with the ewe, such as Minnesota and Wisconsin. The general 'feel' of the ewe antenna is somehow very different.
Can anybody explain this?

Good DX!

John

These are some loggings from the previous before. I didn't hear much last night, partly due to a broken ewe, but mostly I suspect, the conditions, which were still not good. I tried to ID what I presume was ZNS1 on 1540 but it never ID'd despite a persistent and fair signal up to 03:00 when it got splattered out by some adjacent channel muck. An unidentified language was also heard on 1540 after 02:00, maybe Toronto.

The new 'more permanent' ewe antenna gets put up today! :0)

Good DX!

705. Old ewe problems, new ewe problems

Yahoo group: skywavesmw
Date: 2006-03-24 10:49:13 UTC
From: John Faulkner
Topic: 705 Message: 705

A series of minor disasters here over the last three days.

* Problems with an overnight recording becoming corrupted.
* The old ewe broke (variable resistor).
* The new ewe I built yesterday doesn't work!

I spent four hours on the garden constructing a new permanent ewe antenna yesterday. Both wooden supports have been oak stained and
fixed to garden furniture / climbing plant frame in order to make things less visible. I'll post some photos of it all in a day or
two. It's slightly bigger than the previous ewe but only by a couple of metres in length. Problem now is zero directivity and the
tuning isn't working. I suspect a part of the coax has come out of one of the screw blocks where I had to extend it. The
aggressive twisting of self-amalgamating tape probably wrenched something out.

Conditions are very poor now (thankfully) so I hope I'm not missing too much.

Heard a bit of WINS on 1010 at midnight, but very little on the old faithful channels of 1390 and 1470. I guess there was a little
more around but most of the band was splattered to pieces so it was impossible to be sure.

Fingers crossed the rain stops now then I can get back out in the garden.

Good DX!

John

Sorted the new ewe. There was a break in the actual wire itself! Highly unlikely in stranded wire too! The new ewe is now up and
running and seems to be performing every bit as good as the previous one. I'm thinking it might be better but we will see.

I am hearing something under Luxembourg's puny signal on 1440 !! Holland 1008 is gone completely! Holland 747 is *almost* gone.
The various Germans are also seriously reduced in level.

It's only 18:00 hours so maybe this is a bit too early to be making judgements on skywaves sighnals but initial results are very
promising. I will try and post some audio samples and photos soon.

Good DX!

John

710. Conditions Overnight

Yahoo group: skywavesmw
Date: 2006-03-25 11:05:11 UTC
From: John Faulkner
Topic: 27 Message: 710

Nothing to write home about. :0(

Recorded 1430 overnight - it started off with Brazil, a Latin music station and WENE around 23:00. This continued for a couple of
hours with Brazil becoming dominant by 01:00 then things tapered off. I had a quick tune around 06:30 and there a few snippits of
east coast north Americans and several Spanish stations on the regular channels - 980, 1290, 1380, 1390 & 1470.

Luxembourg was down to a low level enough levels at sunrise to allow a very poor tentative WVEI through underneath.

Nothing was better than "weak" though.

Very disappointing for the March equinox!

Good DX!

John

Saw nothing in New Zealand, but, the eclipse's effects have been felt here. Optus (Australia) were doing some repositioning to the Optus B1 satellite which resulted in the loss of signal to all of Sky Digital's New Zealand subscribers.

Before Optus were able to start repositioning work, the solar cells had to be recharged because they had been flattened by sunlight being cut off by the eclipse.

Very poor around the midnight slot but an improvement by sunrise.

My overnight recording on 1590 produced nothing of note, just a
presumed WARV.

The good news here is that some minor modifications have made quite
dramatic improvements to the nulling capabilities of the ewe
antenna. For instance, 1410 was always a difficult channel and I
have only ever heard occasional snippets of speech between dreadful
splatter (not sure if this is from 1404 or 1413 without checking).
This morning I was able to hear two English north American stations,
one being WPOP at weak but quite readable levels. 1420 was also
difficult but this morning had a Latin American music station and a
north American talk mixing together! 1310 had a north American too -
first time I have heard anything on here since the 80's! 1020 KDKA
was easy, despite not being of any great strength. Even 1340 kHz had
a station at one point!

Good DX!

Am I nocturnal?

Not at all. In fact I tend to require more sleep than most people I know. I have developed a nightly routine for my MW DX listening though.

Firstly, I'm usually in bed by 11pm, midnight at the latest. I may have an hour or two under the headphones if it's convenient. I record everything overnight via Dream software. If anything interesting comes up I discreetly make a note on a digital dictaphone. Discreetly so as not to wake my other half. If I awake at sunrise I might have a tune around for an hour. I rarely get up before 9am so I have usually had more than enough sleep.

When I'm not at the dials I just choose a particular channel and let Dream record record it for me. This channel might get changed if I get up in the middle of the night to do the sort of things people normally get up to do in the middle of the night, if you see what I mean. This is typically twice a night in my case. Anyway, "too much information" as they say these days.

It only takes me a few minutes the following morning to go through the overnight recording and reference any notes from my earlier dictation. I check the hour and half-hour from the recording which doesn't take more than a few minutes. If there is anything interesting it may take a little longer while I do any research or study more of the recording. Probably not much more than half an hour at the most while Ihave breakfast.

So you see, the system works very well and it's quick too!

My "day job" keeps me occupied for the rest of the day once I have got my DX out of the way. Plus I work from home which has its obvious advantages! ;0)

Good DX

John

I did not mean to offend at all, my quip was only meant as it was implied ...in jeasture. I enjoy reading your logs and am envious of your catches. Perhaps I should not be so light hearted. Sorry. I like your system and whould love to work from home as you do, im actually trying to do this. As you may recall Im hoping you and Julian H. will come to stay over the summer. Looking foreward to meeting you in person. Im all set up for FM but not having much luck on MW. I need to sort thre antenna out only a G5RV at present.

Yours sincererly

Mark

Anglesey

726. You know you're an AM DXer if:

Yahoo group: skywavesmw
Date: 2006-04-01 23:30:42 UTC
From: Mike Barraclough
Topic: 726 Message: 726

You know you're an AM DXer if:
- You take a trip to a tropical island and spend all your time checking out the radio dial.
- Propagation forecast means far more to you than the local weather forecast.
- You tell your wife, when she sees a new radio in the shack, that it's been there for years.
- Your watch is set to UTC.
- Someone asks if you'd like a Beverage and you immediately think of a long piece of wire.
- DX Bulletins and electronics magazines make up most of your bathroom library.
- You and your wife took a cruise so you could visit the radio room.
- Your teenager doesn't invite friends over because you might be "listening to static".
- You know the Latitude and Longitude of your home.
- You've stripped wire with your teeth.
- You've told your son "One day, this will all be yours", and he doesn't respond.
- The sales people at the local Radio Shack can't answer any of your questions.
- You bought your wife a radio for her birthday because it has a synchronous detector.
- You know the locations of all the expanded band stations but you can't find your car keys.
- You've ever told your wife "not tonight dear, I have a DX test".
- You make suggestions like Aerial and Drake when picking names for the baby.
- You've made an offer on a house, contingent on it passing ground conductivity tests.
- You've ever told someone that electrical noise is not the same thing as static.
- You have more friends in DX Clubs than in real life.
- You can hum the national anthems of at least 40 different countries.
- You know the call letters and frequency of every station in Alaska but you can't remember you kids' birthdays.
- You can remember the frequencies, calls, dates, and times of all upcoming DX Tests, but you forget to pick up whatever it was your wife said to get on the way home from work.
- You spent more on your receiver than you did on your wife's wedding ring.
- You think that people yawning around you are sleep deprived.
- Oldies tunes remind you of stations you've heard instead of former girl friends.
- You've ever told a real estate agent you want a lot 1000 feet long

and fifty feet wide, pointed at Australia.

Hi Mark,

No offence taken at all! :0)

It gave me the opportunity to explain how I do what I do as I'm sure some members will think I'm permanently glued to the receiver!

Not checked my overnight recording yet but I recorded 1370 as there were quite a few things happening. WDEA was the best I have ever heard it. I will put a recording up online soon.

A little busy today. I'll try and get back on here later.

Cheers Mark

John

From: John Faulkner
Topic: 729 Message: 729

1370 WXXI Rochester NY. "You're listening to Member Supported
Public Radio WXXI Rochester" News, then "Marian
McPartland's Piano Jazz" Weak 0100 02/04 JF

1370 WDEA Ellsworth ME. Good signal. Clear (apart from WXXI
QRM!). "AM 13-70 WDEA Ellsworth, a Cumulus Media
Station. Best I've ever heard this!
Good 0000 02/04 JF

A personal first with 1370 WXXI and a stunning signal from WDEA.

Recordings at:

WDEA = http://www.skywaves.info/2006/1370-wdea-0000-02-04-06.mp3
WXXI = http://www.skywaves.info/2006/1370-wxxi-0100-02-04-06.mp3

WDEA is as clear as I've ever heard it. But you'll need to listen to
WXXI with headphones. Refer to the ID above. It was not easy but I
listened to WXXI's webradio to cross-reference the ID and there is no
question this was WXXI. All programme material matched up 100%.
The "Member Supported Public Radio" ID is relatively clear but the
rest gets buried under WDEA. You can just make out the "WXXI
Rochester" part but it is difficult. WXXI is the only NPR station
listed on 1370.

Good DX!

736. Short Wave logs.

Yahoo group: skywavesmw
Date: 2006-04-04 01:56:06 UTC
From: Paul Logan
Topic: 732 Message: 736

Hi all,

every couple of years I rediscover ShortWave - theres still it seems plenty of interest on there. I'd love to see what others hear particularly tropical bands and domestic logs from the higher frequencies. Gives you something to tune for.

Noticed in the last couple of days that Djibouti is often a cracking signal on 4780 at sunset while AFRTS Diego Garcia on 4319 is there during darkness battling against the close by data signal.5005 Eq Guinea plays some great music while 5500 Voice of the Tigre Revolution from Ethiopia is also good at dusk. Heres a few others logged in the last days.

4910 17:58 28/03/2006 ZNBC Lusaka Zambia, yl with id.
6105.5 00:39 29/03/2006 R. Panamericana, La Paz, Bolivia, sports coverage and id.
6134.8 00:45 29/03/2006 R. Santa Cruz, Bolivia, sports mixing w Aparecida Brasil
6155.3 00:50 29/03/2006 R. Fides, la Paz, Bolivia, sports.
6612 17:46 28/03/2006 ZBC Gweru, Zimbabwe, African music. Harmonic of 3306
7100 04:15 28/03/2006 Voice of Broad Masses, Asmara, Eritrea, prog 1, east African mx and talk
7110 04:22 28/03/2006 R. Ethiopia, yl in Amharic // 9.704
7175 04:10 28/03/2006 Voice of Broad Masses, Asmara, Eritrea, prog 2, east African mx and talk
7590 19:30 31/03/2006 AFRTS Keflavik, Iceland, Jim Rome sports talkshow
7811 02:45 03/04/2006 AFRTS Key West, FL, ESPN sports.
9704.2 04:22 28/03/2006 R. Ethiopia, yl in Amharic // 7.110
11615 18:15 28/03/2006 LJB Tripoli, Voice Of Africa, via France, english news.
11660 16:16 28/03/2006 Radio Australia, Shepparton, "Australia talks back" ABC talk show.
11735 18:05 28/03/2006 Voice Of Tanzania, Zanzibar, relay of ee news from Spice FM
15120 17:15 28/03/2006 Voice Of Nigeria, Ikorodu, english. om in talk quite bad audio.

rx - NRD545 ant - 80 foot long wire.

Should we have another list for short wave? or is
posting here ok? - id be well up for posting regular
items and news bits.

regards

Paul Logan,
Lisnaskea, N. Ireland.

Tropical band DXers tend to go hand-in-hand with medium wave DXers. Personally, I've never had any luck on these bands.

If there is sufficient interest I could sart a separate group for this, but I see no reason why tropical band loggings shouldn't be included here.

As for short-wave, I would appreciate more feedback about this. As you know, we anticipate a new website in the coming weeks and several things will be re-designed so all comments are welcome.

I'm not so sure short-wave in general should be included here but that's just my opinion. I suspect I will be on my own with that view.

Thanks for your feedback. Looking forward to receiving more comemnts.

Good DX!

--- Tim Bucknall <timbucknall@...> wrote:

> i don't really want general Shortwave on here,
> nothing above 7mhz IMO

Should we have a completely seperate list for all SW?.Im mainly interested in domestic stations on or outside the tropical bands but wouldnt mind getting info on other stuff - ham / utilities / anything.

One thing that is interesting is how the tropical bands and higher can deliver wildly varying results dependent on conditions. I heard Bolivia on 6105.5 on the 28th and havnt had a trace since.Also remember way back in the 80s hearing some incredible Peruvian and Bolivian stuff on the tropical bands- again very dependent on time and conditions.

Im pretty much interested in all except the programme schedule of Moscow or China Radio International.

744. Tropical & SW logs ??

Yahoo group: skywavesmw
Date: 2006-04-04 12:57:21 UTC
From: Joop Prosée
Topic: 744 Message: 744

Gd Day 2 all,

My opinion concerning tropical-Band and SW-logs in this
MW-group.
Tropical-Band logs are fine by me, after all the
tropical-Band partly lies in the official MW-Band.
MW runs from 300kHz till 3000kHz(3MHz).

Another reason to allow Tropical-Band logs is quite
obvious, propagationally seen the classical MW(522-1700kHz)
and the tropical-Bands share very much the same physical
propagational phenomenae.

In the past I had nice receptions from the USA of MW-HAM's
in the 160 metre Band(±1800kHz), maybe a tip for other
MWDXers ??

On the other hand, I agree with others, that SW-items and
SW-logs are NOT welcome in the SkyWaves MW DX-group.
If you are a SW-fan, there are enough DX-clubs that deal
very extendedly with everything that occurs in the Short Wave
Bands !!
Gd DX & 73's de : JOOP.

now that was dxing ;-)

i'm afraid not it was at the solar peak i lost all by logs when my pc died, it was 24.170khz (2x12085) ah! happy days! today you're lucky to hear anything on 21mhz let alone 24!
it was also before i started the harmonics group so it won't be listed there it was pretty much hearing that station that prompted to start that group

Subject: RE: [skywavesmw] Short Wave logs.

Tropical band DXers tend to go hand-in-hand with medium wave DXers. Personally, I've never had any luck on these bands.

If there is sufficient interest I could sart a separate group for this, but I see no reason why tropical band loggings shouldn't be included here.

As for short-wave, I would appreciate more feedback about this. As you know, we anticipate a new website in the coming weeks and several things will be re-designed so all comments are welcome.

I'm not so sure short-wave in general should be included here but that's just my opinion. I suspect I will be on my own with that view.

Thanks for your feedback. Looking forward to receiving more comemnts.

Good DX!

John

750. Conditions

Yahoo group: skywavesmw
Date: 2006-04-05 11:06:10 UTC
From: John Faulkner
Topic: 587 Message: 750

Another very late morning arriving home. No DXing at all overnight. Tuning the band at 6:30 am local produced lots of north
american signals including a north American on 1490 featuring a child talking, until fading out five minutes later. I thought it
was a Disney station but it was not // WQEW 1560. Reception was barefoot on the AR7030, i.e. without Dream.

With my luck lately I bet I missed the best north American DX morning of the season.

Temperatures in the Peak District were as low as -8 deg C at sunrise (according to my car's thermomenter). It was a crisp, clear
night and I could clearly see the red lights from the Belmont, Moorside Edge, Holme Moss and Waltham-on-theWolds transmitters while
on Beeley Moor.

Brrrrr!

John

Thanks for your feedback on the SW loggings issue.

I am still in two minds (isn't that called schizophrenia?) regarding opening a separate group for tropical band loggings. I will rest on this for now and see how many loggings materialise here, but my feeling is to have a separate forum.

I would also be inclined to restrict these loggings to tropical bands. i.e. strictly below 5.1 MHz.

Those are my thoughts for the day!

Cheers

John

752. Inclusion of tropical band and shortwave

Yahoo group: skywavesmw
Date: 2006-04-05 20:45:35 UTC
From: markthomasq
Topic: 752 Message: 752

Hi John

Im not sure if enough has been said and you are closing the subject for deliberation but I would like to give my opinion, I know I am a new member but if you could bear with me.

I do notice that there is no forum for TB enthusiasts, and I am somewhat surprised at this as since I have been enjoying the hobby (since early 80s with breaks it has always been mentioned and listed in the various magazines - more than band 2. Indeed Ive asked many people myself how to start a group specializing in TB, but Im not really informed enough to do myself.

I think there is definately a place for a separate group which I would give all my support to in any way I can. However I do think that TB and MW go hand in glove both aim for domestic stations and the antennae etc are not far removed "ewes" etc..

With regard to general shortwave I think the group would be spread too thin. Every listing Ive seen regarding above TB tends to deal with international broadcasters and concerns over new schedules, is this just shortwave listening as opposed to DXing ? - I dont know.

What I do worry about is the group loosing its identity. Members who specialize in MW enjoy recieving posting and sharing info about their chosen interest. Inclusion up to 30 megs would dilute every thing significantly and may not be to everyones taste as new members would be attracted but only contribute to general listening - if that is their interest of course. This applies to TB also.

Anyway these are my opinions. Whatever you decide I know will be well thought out and fair. Either way you will have my full support and any assistance I can give.

All the best

Mark

John,
With Dream, how do get the time references like those you get in RecPro-All?
Dream only records WAV and does not have that function.

John,
With Dream, how do get the time references like those you get in RecPro-All?
Dream only records WAV and does not have that function.

I don't think you can. I name the file something like " 2235gmt-06-04-06.wav "
which refers to the actual time I start the recording, using a radio-controlled
clock of course. The file is converted to mp3 then opened up in WaveLab. I can
add time markers, shave off part of the recording, in fact do all kinds of
things so I know the exact time of any part of the recording. I can actually
see where the signal fades and where the splatter is by just looking at the
waveform.

>The good news here is that some minor modifications have made quite
> dramatic improvements to the nulling capabilities of the ewe

What modifications did you do on it?

Well, I said "minor" modifications. The variable resistor is now housed in a
watertight box and part of a small pcb. The pot is now a 10k logarithmic type
and the best nulls are foudn around 2-4k. I can add capacitance now too. But
the main thing which caused the improvement was when I repositioned the rear
vertical and moved the earth rod by a few inches. I don't know why this worked
so well but it did.

I deliberately tried to recreate the original ewe, using the same supports and
positioning but it was actually worse. There appears to be a degree of *luck*
in this. Why the ewe should work better after moving the rear vertical a few
inches (six?) I do not know.

Perhaps the word "modification" is irrelevant but the performance difference was
significant.

I will take some photos and record examples one day. Right now things are
upside-down here. I'm not sure if I am about to move area. Domestic issues.

Cheers

John

Perhaps is has more to do with the changing soil conditions. And those are
pretty hard to judge.

From: markthomasq
Topic: 759 Message: 759

Hi Everyone

Anyone picking up BF on 5030 or Gabon on 4777, this will be early am this time of year. But BF usually good signal from 21.00 onwards.

Any good tropical band DX being picked up

What opinions do members have regarding TB antennae ? Im presently using a G5RV with global atu but will be putting up an ewe, I think I will need something else as well as the ewe is directional and my garden while being 100 ft long is only 15 ft wide.Dont want to pick up only in 1 direction !

Any advice appreciated

Mark

Hi Mark,

a full sized G5RV is resonant on 20 metres / 14 mhz
but tunes 3.5 - 30 mhz. How about trying it in an
inverted V fashion which may work better than
horizontal for further away stuff, itll introduce a
vertical component into the antenna and lower the
angle of pick up - better for longer distance.

Or go for a dipole in an inverted v with legs of 47.5
feet.

other ideas... I had an EWE which roughly was the same
size as those used for top band and 80 metres - being
15 feet high / 40 feet long - worked very well on
medium wave and up to 80 metres - didnt give it much
of a work out on the tropical bands but it had roughly
the same pick up as a 90 foot wire with some extra
directionability.

Or how about a nice 47.5 foot vertical over at least
four similar length groundplane.

Alas Ive never had the space to play much with
antennas but.... one can dream

Thanks Paul

Ill try somthing on those lines, firstly I was thinking of putting a long wire arond the garden is 100 ft out 15 across my mast is about 25 ft, Ill put up another about 15. and then returning it to the house, connecing it to the inner of some coax and then to the atu. See how it goes not very scientific though - just getting wire out.

By the way Im working my way through Irish fm stations. Must get a rds though

Mark - It's the null which is directional on a eWe. You can receive on the other three compass points.
Anyway, John does very well with a 15ft eWe, so I guess you can point your eWe where you like!
Let us know how it goes!

Hi

I'm currently seeking verification of a carrier trace on 1500kHz
The characteristic was a repeating +/-5Hz every 12 mins. I expect this
footprint is known given the dx frequency and it's characteristic
(WTOP)?

I can fwd screenshot if advised.

Regards
Chagall

771. Skywaves website updates

Yahoo group: skywavesmw
Date: 2006-04-14 16:32:48 UTC
From: John Faulkner
Topic: 771 Message: 771

New Website:

The current Skywaves website provides an introduction to our hobby, some notes about our group and basic information about different
aspects of the hobby. The recent addition of the online logbook has proved popular too. Other than this, the site is fairly simple
and it could be argued that it needs updating in a few places. No major updates have taken place for a while as it had been planned
to give the site an overhaul and incorprate lots of new interactive features. My usuial "lack of time" excuses have got in the way
and, more recently, Web Mania have caused us a few headaches and delays in the development of the a site. It might interest you to
know that they still haven't refunded the hosting fees they promised. Not only did they attempt to steal our domain name but they
clearly do not wish to refund the money they owe us, which amounts to theft. There was also another issue which I won't mention
here but which highlights their unscrupulous and unprofessional behaviour.

Moving on. I am about to sit down (better than standing up) and re-design the basic layout of the new site and wanted to ask you a
few questions first ...

We want to know what you would like to see on the new site. We also want to know if there is anything you dislike on the current
site, or anything you think could be improved.

We need your feedback so we can get this right and make the website the best it can be for you, our members!

Firstly, a new, easier to navigate, interface is now in place 'behind the scenes'.

We would like to put a good strong heart into the British FM & TV Circle. We have two thriving Yahoo Groups but it has been felt
that these have been the main downfall of the printed Skywaves magazine. The e-zine continues but this could be another are which
can be greatly improved. We want to encourage more participation from members while simplifying things for all and while improving
the service we offer. This is not a new strategy of course but a new and appropriately designed website could be highly beneficial
to us all.

* Do you think it would be better to incorporate the e-zine into the website? making it a magazine all on its own? There could be
sections produced and updated online. A simple membership would be incorporated in order to use this. Members could submit news,
loggings, articles, etc. by an online contribution system for each section. Then a

collation of all the sections at the end of each
month would form the e-zine. It's just an idea.

* A new software upgrade has been implemented into the website which will enable many new features. For instance, we could have an
online shopping basket where you can purchase aerials and accessories through the club at discounted or trade prices - with
reasonable delivery charges!

* Simple online payment methods can be set up.

* We plan to introduce a better and more interactive DX early warning system.

* We could make far better use of our member's area where you could have your own space for radio-related files, be they audio,
video or whatever.

* Medium Wave will probably be covered in a little more detail and this will be monitored closely to gauge interest. Tropical bands
is also a popssibility as has been discussed recently on the medium wave forum. We have 94 subscribers to this already!

All of these services would be free of charge via a simple membership login, though the proposed modernised DX early warning system
may require a small fee - probably ?1 per year, payable online.

* Regarding editors for any proposed online sections: This would greatly simplify and streamline the way contributions are sent
while making the editor's job far easier. This would enable a constantly evolving news and DX loggings service which would be
updated as you contribute, producing information 'as-it-happens'.

* An embedded media player will be incorporated into the new site to stream audio or video clips.

* The chatroom can also be incorprated into the framework of the website so external chat clients would not be necessary.

* Additional alerts from the forums (and other sources) could be automatically fed to the website via xml feeds.

Quite simply, a whole new world of possibilities could be made available through the new system.

Please send your suggestions and comments, either directly to this group, or personally to me.

I'll be looking forward to hearing from you.

Regards

John Faulkner

Dear Sir
I have a widesceen Samsung TV purchased last September which also has
DTV. The pictures on analogue are satisfactory
but on changing over to DTV some of the channels (Itv 2, History ect)
only appear in 4.3 despite useing the adjustments.
The only way I can get 16.9 is to reinstall my old freeview box.
Question.
Could this be my existing aerial is not sufficiant.

Hi David

Sorry for the delay in response - I can only guess that the three carriers witnessed would be WTOP, Malone NY and St Paul MN - the three big hitters on 1500kHz. I will continue to monitor this freq and report.

Regards
Rick

From: John Faulkner
Topic: 767 Message: 774

My earlier message hasn't arrived so ...

Also on 1500 you may have had R Dos Mil from Cumana, Venezuela. R Santa Rosa, Lima, Peru is also a possibility and is heard occasionally in the UK.

Check also for power-downs / sign-offs late evening from daytimers WFIF Milford CT and WLQV Detroit MI.

I'm not sure about the NY or MN stations. As far as I know KSTP has only been logged once this season. it is fairly rare though I would expect the carrier to be present more frequently.

Good DX!

John

Hi John

Re: 1500kHz - Thanks for your return. I guess the three carriers witnessed that night would be DC, Malone NY and St Paul MN? They seem the three big hitters here. I will continue to monitor this freq - I have also asked WTOP to take a look at it.
Regarding interest from the americans - it would be useful to have a local source to assist/verify.
Regards
Rick

John Faulkner <john.faulkner@...> wrote:
Sorry it was a brief response. I have been a little short of time lately (bad time-management on my part if I were honest).

The mwoffset group will undoubtedly be more familiar with carrier measurements but there is still quite a challenge ahead convincing
the Americans of the benefits of this. Until recently they have been reluctant to do this.

I presume your carrier is temperature controlled so it may narrow things down considerably.

There are certain regular transatlantic signals on 1500 we get in the UK. It would be interesting to see if this carrier appears
consistently and at what levels.

Fingers crossed.

Cheers

John

776. Overnight Conditions

Yahoo group: skywavesmw
Date: 2006-04-16 12:59:56 UTC
From: Paul Logan
Topic: 776 Message: 776

Hi all,

a brief check at 5 am this morning showed MW to be in great shape - havnt been listening in a while - 1390 had two loud Latin Americans one with fast music the other with an easter church service. Both were about S7 - 1430 had two more Latins mixing again good strength and 1520 had a very loud Latin with fast music.

1590 had a blank carrier about S7 while WDHP on 1620 was S7-9.

Sao Tome VOA was dominant on 1530 just before 5 in Portuguese followed by I think Hausa on the hour.

I was only on my way to bed so couldnt really stay up what with todays fun fest to get through....

Paul Logan, Lisnaskea, N. Ireland.

777. 1390 overnight - 20-04-06

Yahoo group: skywavesmw
Date: 2006-04-20 13:40:11 UTC
From: John Faulkner
Topic: 777 Message: 777

1390 WISA R Noroeste, Isabella. Peaked to weak signal at top of hour with "Noroeste" ID by YL and mentions of Puerto Rico. Also heard previous nights but never a definite ID. V weak 0500 20/04 JF

I used RecallPro directly out of the 7030 aux socket tonight. The idea was to record the frequency and compare notes with other DXers. Perhaps others here would like to join in and swap notes too. This is what I heard ...

01:00 (GMT) - Two (maybe three) Latin stations. Possible Radio Nacional ID heard but unclear. Extremely Weak.

02:00 - Two Latins, still very weak.

03:00 - Nothing discernable.

04:00 - Lively music station and Portuguese footie commentary prior to the top of the hour. Someone scored a goooooooooooooooooooal at 03:56 and at 03:59. Still extremely weak.

04:38 - Another goal from the Brazilian.

04:51 - Spanish station dominating with talk but yet another goooooal underneath!

05:00 - YL Spanish at top of hour ID'd as "Noroeste" and mentions of Puerto Rico so WISA, a personal first. A Latin rhythm station heard underneath.

05:10+ - A general increase in signal strengths though still quite weak. Two talkers in Spanish, one presumably WISA. A soft music station joined in a few minutes later.

05:18 - R Fe y Alegria ID after promo.

05:30 - Spanish OM talking. Start of fade-out. All gone by 07:00.

Well, nice to catch WISA at last. I believe I have heard this several times recently but never had a positive ID.

I will be recording 1390 again overnight tonight but using Dream software rather than RecallPro.

Here's a recording of the Brazilian at 03:59 just to demonstrate how quiet the MW band is here since re-positioning the ewe antenna ...

http://www.skywaves.info/2006/1390-unid-0359-14-04-06.mp3

It might not be so apparent by listening to the recording but this station was extremely weak with the S meter not even showing any signal on the AR7030!

Good DX!

John

779. Ewe Demo - 1008 kHz

Yahoo group: skywavesmw
Date: 2006-04-22 02:01:49 UTC
From: John Faulkner
Topic: 779 Message: 779

http://www.skywaves.info/2006/1008-rlp-2227-20-04-06.mp3

A recording of Radio Las Palmas on 1008 kHz.

This was always a problem frequency with the loop / longwire phasing system as I could never reduce Holland by much. Things are
very different with the ewe antenna though. Can you hear Holland on this recording? Same goes for other Dutch occupied channels -
747 is now dominated by Spain here. Even 927 and 1512 are greatly reduced with the ewe. No problems if Belgium doesn't sign off
for the night as I can still hear transatlantic stations!

Good DX!

784. QTH ís Important !

Yahoo group: skywavesmw
Date: 2006-04-29 18:11:45 UTC
From: Joop Prosée
Topic: 784 Message: 784

Hi Group,

This week a short vacation in the mid-north of Belgium.
I had the strange experience, that much closer to certain
Belgian and French MWTX's, I couldn't catch any signal of
them compared to my home-QTH situation !
(Using the same receiver, SANGEAN ATS 803A.)

F.i. the French 1377kHz 300kW Rijssel(Lille) MWTX is always
audible at my home-QTH over 270km(168miles). At my Belgian
vacation QTH at "only" 135km(84miles), nothing of the 1377kHz
could be received(Not a trace !!). Also the 1188kHz of
Kortrijk(B) 5kW was completely gone at a distance of only
75km(47miles), while this MWTX can always be received, at
my home-QTH at 230km(143miles)with a weak, but constant signal!!

Conclusion : I think that my home-QTH is a very good place
for LW/MW-DXing.

73,s de : JOOP.

despite the 5kW and

787. Quiet Season

Yahoo group: skywavesmw
Date: 2006-05-04 09:52:01 UTC
From: John Faulkner
Topic: 787 Message: 787

We are now well away from the winter season and the window to north America is becoming shorter and shorter here in W Europe.

If you wish to hear north America now the only slot available will be an hour or two approaching local sunrise. You should still be able to hear north America but only the easier east coast stations may get through. Parts of south America should have a bigger window with signals still arriving from late evening. 1390 and 1470 are always good channels here.

How about a simple challenge through the summer months. What is the furthest daytime signal you can receive? It doesn't matter where you are.

Good DX!

John

788. Transatlantic Conditions: 04-05-06

Yahoo group: skywavesmw
Date: 2006-05-04 16:35:37 UTC
From: John Faulkner
Topic: 788 Message: 788

From the other side of the pond this time. This from Mark Connelly in Massachusetts (have I spelt that right? Looks odd :0)

"
First of all, TA signals were already good at 2200 UTC (6 p.m. EDT), about 2 hours before local sunset. Not surprisingly, Saudi Arabia - 1521 was the leader of the pack; other high-band signals such as France
on 1467 and 1557 weren't too bad either. As darkness approached, it got more interesting with many European, North African, and Middle Eastern stations piling in. This even extended to quite northerly stations including a very good signal from Norway - 1314: easy enough in autumn / winter but less common in late spring / summer. Some of the more interesting catches included Portugal - 981 briefly over the Algerian powerhouse, Croatia on 1143 parallel to more-common 1134 and 1125, Egypt-1106.77, Serbia (Beograd) - 1107 likely over Spain with Balkan music, something else Slavic on 1287 covering usual Spain, Turkey on 1017 over Spain/Germany, and then (the night's crowning achievement) FOUR Romanians bagged with parallel programming at 0022-0025 UTC (4 MAY). They were 1332 (excellent - huge), 855 (almost equal to Spain), 1152 (dogfighting with Spain, others), and 1179 (atop SER Canaries-Spain, others at times). 1053 might have made it too, but TalkSport UK was local-like.
"

Just to show TA conditions are still possible at this time of year. Sadly, today's geomagnetic disturbance will probably prevent a continuation of this tonight.

Good DX!

John

789. 1390 Overnight

Yahoo group: skywavesmw
Date: 2006-05-06 02:37:18 UTC
From: John Faulkner
Topic: 789 Message: 789

I've been away from medium wave DX for the last week or more but I thought I'd have a go 1390
overnight and heard two stations: English oldies and WEGP. I was surprised to hear several north
Americans at reasonable strength on other channels just before 01:00, including 1450 WKXW, WINS
1010, WZNN 1510 and a few others elsewhere. 1470 also sounded very lively. To be honest I wasn't
awake enough to want to listen so I just left Dream recording on 1390.

There was a lot of noise on 1390, possibly just a general mush of static from distant storms. There
was also some splash from a neighbouring European.

Good DX!

790. new Skywaves Website - Request

Yahoo group: skywavesmw
Date: 2006-05-06 04:26:37 UTC
From: John Faulkner
Topic: 790 Message: 790

Major leaps forward have been made with the new Skywaves website. This is now being designed and
built 'behined the scenes' and will shortly replace the existing site (hopefully in the next few
weeks).

We have decided it may be best to release the new site before all the planned features have been
added as it could be several months until everything has been included.

There are two things we need and thought it would be a good idea to throw this open to the group.
The present header on the website has been with us for a few years but doesn't actually contain a
logo as such - something we have never had. Although we could stick with our present image it would
be nice to have a personal logo / banner created. Would anybody here with an artistic flar like to
design a new logo / banner for the group?

Secondly, it would be good to have a few simple receiver reviews, be they for medium wave, television or FM equipment. We intend to have a section on the new site which deals with these and
any modifications which have been carried out to improve performance.

Any relevant features and articles would be gratefully received.

Thanks

John

791. Wellbrook ALA1530 loop antenna

Yahoo group: skywavesmw
Date: 2006-05-06 16:49:21 UTC
From: slothpuck
Topic: 791 Message: 791

Hi all,

Can anyone help me out here?

I've just recently bought a wellbrook loop antenna, an ala1530 (http://www.wellbrook.uk.com/ALA1530.html) . All seems to be "working" ... well, up to a point. I have it connected up to a Yaesau VR500 scanner (indoors). The problem seems to be the antenna's performace, or rather lack of it! Unless I am expecting too much or doing something badly wrong it dosen't seem to be doing that much more than an internal ferrite rod antenna! In one case, listening to a distant german long wave station on (I think) 153Mhz, a radio with a ferrite rod (an old Grundig city boy 1100) worked better! I admit I had to use the Yaesau's attenuation feature most of the time, however.

The amplifier section on the antenna seems to do something since unplugging it from its power supply makes signals vanish to almost zero.

Can anyone tell what I'm doing wrong?

Thanks

794. unusual signals at LSR

Yahoo group: skywavesmw
Date: 2006-05-11 07:19:26 UTC
From: Jurgen Bartels
Topic: 794 Message: 794

Intriqued by reports on http://dxlc.com/solar/ I observed the last couple of days around my local sun rise (LSR) the band. I only used a 1x1m loop with Sangan ATS 909. First at the Northsea where indeed I heard signals on 1470 & 1390 that where not audible when I went to bed. Also 1620 VI came in.

Here in central Germany signals are poorer but audible. But this morning was a real surprise. 1390, 1470 were quite strong but hard to identify, and even 1510 WWZN came in loud for the very 1st time. Normally it is inaudible at this time of year. Also 1660 (tent WWRU) was there. Like Jan Alvestad observed, I also found the US Tx arrived more from the west than from the northwest direction. However I have had strong signals while he in Norway had them come in weak due to the disturbance. At around 4:00 UTC (20 minutes after LSR) all faded away

Has anyone in the UK checked the band this morning?

Jurgen

Ann

I would be interested to know what treceiver you are using.
Unless conditions are very good (as in midwinter) then
you need to slope detect using USB / LSB.
Tune to say 1510khz on usb.
The reciever must have accurate frequency readout.
By using USB or LSB you can use the narrow filtering of the sideband
filters.
The best time to listen is after darkness especially after 2100-0700 with
variations.
The Transantlantic propagation peaks mid winter december january but can be
good october-march and occasionally
outside of these months.

your 30metre long wire is good enough to give you success but the ability of
the receiver is very important.

Regards Ian G0FYD

798. my radio receiver

Yahoo group: skywavesmw
Date: 2006-05-12 18:18:58 UTC
From: naturkorea
Topic: 798 Message: 798

for information my radio receiver is a yaesu FRG100.
Also for information my house is just 100meters away from a small hill
I think 60meters high and 2 km long this hill and covering most of the
horizon in west and thats where the TA-signals come from.I suspect
this hill has something to do with blocking signals from west.
Also for information with my longwire 30meter I could not receive
australia on 2310 and 2485khz while to much noise on that band,but
with my LA5030(I bought this loop last week)I can hear australia
because of reduced noise with my loop.

Topic: 799 Message: 799

Regarding recent questions about the Wellbrook ALA1530 antenna:

There's no doubt this antenna offers very good gain, even when only a few feet above the ground. I would not recommend using it in conjunction with another amplifier though as I imagine it would completely "take off" with it being amplified already.

Using it with a portable scanning type receiver may also have problems as these tend to overload easily too.

I don't know the differences between the ALA1530 and the LA5030. Hopefully someone can answer this.

Incidentally, I have found the ALA1530 works very satisfactorily up into band 1 (50 MHz - I am trying it as my main band 1 DX TV aerial this season. Performance on FM is not too bad either.)

Regarding not hearing much transatlantic DX on the ALA1530: Firstly this is probably the worst time of year to be trying for this on medium wave. South American signals are often present here at the moment but north American signals will be in short supply until August-ish.

Although the ALA1530 is a superb performer on medium wave, I prefer to use either my ewe antenna or a loop / longwire phasing system as European QRM is always a problem on the solo ALA1530 with its figure of 8 polar plot.

Around 00:00 GMT this morning I heard two weak south American signals on 1470.27 ands 1470.32. I believe the last one was Argantinian. There is a Radio Municipal located in Luis Beltran listed for this offset so I presume that may be what I heard. I have no idea who the other station was but heard a "La Voz de ... " ID at one point.

Good DX!

800. Registration to the new Skywaves site

Yahoo group: skywavesmw
Date: 2006-05-12 02:26:54 UTC
From: John Faulkner
Topic: 800 Message: 800

Registration to the new Skywaves site.

Just to clarify how to do this. Please note your old username will not be valid for logging into
the new website. We tried to this possible but the new system has its own methods of authorsation
and distributing passwords, etc.

You may ask "why do I need to register?" Well, you do not have to if you do not wish, but the idea
is to allow only Skywaves members access to certain sections of the site and to restrict a few items
of club information to members. Registration is free and there are no obligations and no resulting
spam. It helps us in many ways. It also restricts DX loggings submissions to our members. We
envisage that the Skywaves e-zine will be a web-based feature in the near future with online
contribution. At least, that is the plan.

There should be a standard "one login gives access to all pages" over the weekend. Currently you
have to sign in separately for the online logbooks.

TO REGISTER
1. Go to the home page http://skywaves.info

2. Click "Register for access" in the "Members Area" box near the top of the left margin.

3. Follow the instructions and fill in the form.

4. You will instantly receive an email stating your application is being processed. You will also
receive your password with this mail.

5. You will not be able to log into the site until your membership has been processed. This is done
manually at present so you will need to wait a short while for an Administrator to authorise this.
Once processed you will be sent an approval message saying you have been granted access.

All details are given on-site as you sign up. Confirmation wil be received by email.

I am happy to answer any questions you may have.

Cheers

John

801. Website News

Yahoo group: skywavesmw
Date: 2006-05-12 23:43:06 UTC
From: John Faulkner
Topic: 801 Message: 801

To keep you informed about updates to our new website ...

The user login on the main page now automatically gives you access to the DX loggings submission
pages. i.e. you don't need to sign in twice! Please remember that your username and password are
case sensitive.

Certain pages are now being granted "permissions" so only "logged in" members can view them. There
will be more pages like this added along the way. As previously stated, this is purely designed
this way so only members get to see useful club information.

We are not sure what to do with the "Useful Links" page. Do we really need one? Such a page only
causes more work involving additional links and regular checks to see the links all work. What do
you think? Is it time to get rid of the Useful Links page? Or would you prefer that it concentrated on certain types of link?

As with the previous site, we are drawing up a system where members can have their own pages.
Initially this will be restricted to the RSL Desk and TV Logo Gallery while under test. It is
thought that this procedure may take a week or more to implement as it involves rather more than
simple HTML coding.

A new feature called "UK TX Map" has been started. This may also be restricted to members once
finished.

The DXpeditions section has been updated with the addition of the Middleton Top, Cornwall and
Dartmoor pages. The Lleyn Peninsula is under construction, plus there are a few more loggings to be
added to some of these pages.

As always, please get in touch if you have any suggestions or comments about the new site. Or maybe
you would like to submit a feature or two yourself.

Still lots to do!

Cheers and good DX!

John

803. Good overnight conditions - 18-05-06

Yahoo group: skywavesmw
Date: 2006-05-18 09:21:02 UTC
From: John Faulkner
Topic: 803 Message: 803

I managed a quick tune around medium wave from 01:00 GMT this morning and was pleasantly surprised
to hear several north American stations. I did not listen for long nor did I log anything due to
lethargy, but I presume the following east coasters are definite ...

930 CJYQ
1010 WINS
1050 WEPN
1130 WBBR
1180 WHAM
1280 WFAU
1320 CKEC
1390 WEGP
1470 WLAM
1500 WTWP
1510 WWZN - Quite good levels!
1520 WKBW
1540 WDCD
1560 WQEW
1590 UNID
1610 V weak
1630 WRDW
1660 WWRU
1680 WLAA

Good DX!

805. Kvitsoy 1314

Yahoo group: skywavesmw
Date: 2006-05-25 08:55:53 UTC
From: John Faulkner
Topic: 805 Message: 805

NHK reports that the medium wave transmitter at Kvitsoy will go silent on July 1st, 2006.

This will render the channels of 1310 and 1320 much easier for transatlantic DX in Europe.

According to the MWC, the dominant station on 1320, CKEC, is reported to be moving to FM sometime in
the coming winter which will leave 1320 wide open. Fingers crossed that 1314 does not start carrying DRM.

Good DX!

806. Conditions Overnight

Yahoo group: skywavesmw
Date: 2006-05-28 13:50:17 UTC
From: John Faulkner
Topic: 27 Message: 806

I was up around 02:00 this morning and caught some good North American signals. CBG Gander on 1400
was the strongest, giving me S7 on the AOR. Many others were also heard. I ought to be logging
these stations but I only tend to "dabble" in mw DX at this time of year as FM & TV takes over until
the end of summer.

A weak station was also trying to squeeze thought on 1490. 1370 and 1480 also had weak English N
Americans. Not bad going for the time of year!

One thing I intend to do over the next few nights is record the channel of 1350 to see how the low
powered UK stations are getting out. In the daytime I hear a mixture of URN from Nottingham and R
Nightingale from Rotherham here. Never anything else. At night I can also hear the French station.
How is this channel in Europe? I suspect the channel is dominated by France in western Europe?

Good DX!

John
AOR AR7030 & ewe antenna.

809. 1350 Observations

Yahoo group: skywavesmw
Date: 2006-05-30 23:20:18 UTC
From: John Faulkner
Topic: 809 Message: 809

1350kHz is proving to be a difficult channel.

I recorded 1350 overnight and could only ID two stations - R Nightingale from Rotherham and R Orient
from France. There were clearly more than two stations here but the level of automated overnight
programming here makes it difficult to catch a proper ID. Radio Nightingale do however carry local
overnight announcements with IDs. I suspect one of the stations in the background was URN from
Nottingham. This would be in the null of the ewe antenna so reception would not be easy anyway. My
real goal would be to hear Range Radio from Whalley Range school in Manchester. I used to drive
past their transmitter and the signal just does not seem to get out beyond south Manchester. Their
low antenna is clearly visible by the road at the edge of their sports field. Three miles down the
road and the signal starts to struggle.

Both R Nightingale and URN provide groundwave reception here in the daytime but neither are strong.
I would say 1350 is a lot harder to DX than many north American channels.

Good DX!

810. Norway 1314 Gone!

Yahoo group: skywavesmw
Date: 2006-06-30 15:07:35 UTC
From: John Faulkner
Topic: 810 Message: 810

Norway had left the air when I checked at 22:45 GMT. I could hear very weak carriers on 1310 and
slightly stronger (but still weak) carriers on 1320.

1310 did not seem to produce much by 00:30 and only very weak audio was present at this time on
1320. I was disappointed to hear a fair amount of splash from the two Spanish transmitters (produicing echo) on 1314. These will be impossible to remove as my ewe antenna is facing west.

In the end I left my recorder on 1390 as there seemed to be a good deal of activity there. Recording yet to be checked.

I would be interested to hear other member's findings.

Good DX!

This is what Jan Alvestad wrote:

1390 kHz had many stations coming and going with Radio Universidad (Argentina), Radio Fé y Alegria (Venezuela) and Rádio Cultura Maringá (Brazil) all on top at times. With local NRK Kvitsoy on 1314 kHz off (final day of transmission was June 30) several stations, mostly from Brazil, were noted on previously blocked frequencies 1310 and 1320 kHz.

816. Recordings of 1540kHz Overnight

Yahoo group: skywavesmw
Date: 2006-07-23 10:41:28 UTC
From: John Faulkner
Topic: 816 Message: 816

An Interesting night on 1540kHz. The channel hosted at least three signals. I'm still checking
through the recording but there was at least one Spanish station present (CHIN would be in Spanish
at this time according to their schedule) but another Spanish station took over at 02:00. I recorded a W call in the mess but, although it sounded like an English "W" there was an apparent top
of the hour Spanish ID wrapped around it. I was considering Puerto Rico (WIBS) since there followed
a programme of Reggaeton music - a popular style of music in Puerto Rico. My recording of a possible ID is here ...

http://www.skywaves.info/mw/1540-0200-23-07-06.mp3

At 02:19 I became aware of a repetitive morse signal "KA2BE" with Spanish speech either side. The
morse repeated for several minutes but not at regular intervals. It appeared to be part of a
programme. Two examples of this here ...

http://www.skywaves.info/mw/1540-0219-23-07-06.mp3

http://www.skywaves.info/mw/1540-0222-23-07-06.mp3

Possible ID of Spanish station again at 02:30. Sounded like R Punto, mentioning Santo Domingo ...

http://www.skywaves.info/mw/1540-0230-23-07-06.mp3

Finally, a national anthem was heard at 04:00. I have not heard this one before. The signal was
brief and mostly buried under splatter. This was the clearest bit ...

http://www.skywaves.info/mw/1540-0400-23-07-06.mp3

It's great to hear so much on medium wave at this time of year. I cannot wait for the forthcoming
winter season, even though I am really enjoying the hot weather!

Monday morning 0:00 UTC I heard a het on 1520 , tent WWKB, but nothing on 1510.
In fact I was looking for LA, but no chance, too much noise here

It is remarkable to read Jan Alvestads notes. Sometimes signals last up to 1h
after LSR. The D-layer builds up very slowly. So, this may have helped your
KXEL reception, too.
During the solar eclipse in 1999 I stood in the center and monitored some MW
stations east & west of me and the D-layer vanished and built up very fast,
within minutes.

Some superb signals from east coast north Americans overnight. Last night they were appearing well
before midnight. VOCM, CKVO, CJYQ, etc.

I think we may be able to say the forthcoming winter season has started considering recently
loggings.

I subscribe to the MWC alerts list and they have been reporting a fair amount of transatlantic
activity throughout the summer. Maybe it's time to run out those medium wave antennas again!

I monitored 1400kHz overnight but could not identify anything. There were two English stations.
CBG Gander was probably the dominant one. The second might have been Harbour Light from Carriacou
or maybe WOND Pleasantville.

Good DX!

talker Weak 0418 01/08 JF

1650 WHKT Portsmouth VA. Radio Disney IDs and pops
Weak 0345 01/08 JF

It was slow to get going overnight. I left Dream recording 1470 but
both Vibracion and WLAM were sluggish and finally peeped through very
weakly at 0200.

Awake at 0330 and a quick tune around revealed some reasonable
signals from a few east coasters.

* 1430 had a second English talk station.
* 1600 had a second station with English talk.
* 1520 was dominanted by a lively Latin, presumably Vida AM and the
weakest of traces of WWKB, yet WMRE on 1510 was almost local
strength!

I'm pretty sure this is an ID on 1520 here ...

http://www.skywaves.info/mw/1520-0428-01-08-06.mp3

from a Latin station but it too weak for me to understand. Maybe a
Spanish speaker will hear this
better.

From: John Faulkner
Topic: 823 Message: 823

http://skywaves.info/index.php?entityType=HTML&id=69

At last, I have finished converting my DX recordings from cassette tape to mp3 and have uploaded
many of them to the above URL.

Over the years I have compiled six cassette tapes full of IDs from transatlantic DX, including
recordings from Sheigra and Anglesey DXpeditions. There is some real nostalgia in here which I hope
you will enjoy - old formats, old calls, old frequencies and many stations no longer on the air,
etc. Sadly, the sixth tape remains missing, doubtless buried in the loft somewhere.

Just one questionable entry though - I'm unsure about the recording of R Sucre on 700kHz as I don't
hear an ID on this. If I don't hear anything positive about this recording I will remove it
altogether. I think I originally transferred the wrong segment of audio. It appears I did the same
with a recording of 1230 WSBB New Smyrna Beach FL which I originally ID'd 100%. Shame I have lost
that one for ever.

You will need headphones for some of the recordings.

If I find the sixth tape I will add more.

Cheers

John

1420 YVNZ R Marabina, Maracaibo. Lively LA rhythms, ID "Marabina,
La Radio .? ." Many IDs, noted until 0510!
Fair 0115 05/08 JF

I monitored 1390 before 0000, two Latins present here, also one with distorted audio, which may have made a third Latin. Difficult to tell as the distortion seemed to be intermittent. Do we know for sure who this is yet?

Elsewhere, Newfie stations were becoming clear after 0000 with good signals from CJYQ and CBG soon followed by other east coast 50kWers.

Several frequency checks were made in order to help me choose my overnight channel. Looked at 1280 which had a Latin and suspected WFAU but these faded down within an hour. Ultimately, I decided to stay on 1420 because it is usually a well-splattered channel yet it was offering a decent signal from a South American station at 0100. No surprises here though - just R Marabina controlling the frequency. I was surprised to find this still audible well past 0500 GMT. It suddenly dipped out at 0510 but there were hints of it up to 0530! 6:30am in the UK - broad daylight!

Good DX!

A good night but hardly any IDs. Stations almost every 10kHz.

Recorded 1380 between 0000 - 0400. IDs were not forthcoming from the Latin or from the English
nostalgia station.

1280 was then monitored from 0400, Sports heard here but quickly swamped by a French / Creole
signal which identified as 4VAM R Metropole. This would be a UK first if only I can prove it wasn't
CFMB with a link-up. Coincidental that 4VAM also used 1280. Hmmmm. Judge for yourselves ...

4VAM ID ... http://www.skywaves.info/mw/1280-CFMB-4VAM-0404-06-08-06.mp3

More of the 4VAM signal ... http://www.skywaves.info/mw/1280-0404-06-08-06.mp3

Over to 870 after 04:24 to try and catch the US station. Presumed WWL but this too got swamped by a
Latin with a suspected ID on the half hour ...

http://www.skywaves.info/mw/870-0430-06-08-06.mp3

I feel sure there are clues in the above recordings.

Good DX!

John

870 LR1 R Nacional, Buenos Aires. ID and programme of tango music "Según pasan los tangos" with Nora Perlé. Thanks to Henrik Klemetz and Martin Hall for help with this.
Weak 04:30 06/08 JF

1280 CFMB Montreal QC? Programme in French? Suspect Creole though it doesn't tie in with the schedule. Frequent mentions of Haiti. Nice apparent ID from 4VAM R Metropole, Port-au-Prince which also uses 1280. Apparently CFMB with new Haitian programming from Saturday night into Sunday morning, not currently listed on website. Station engineer says they could have been featuring audio content from 4VAM at the time I heard this. WRTH says 4VAM is off the air. Good 0404 06/08 JF

Two loggings from the 6th.

Overnight into the 7th produced very little here.

Listening to 1280 this morning I found Spanish at 04:00, possibly Puerto Rico since it was mentioned a few times.

Good DX!

828. Re: [mwc] Reply from CFMB ...

Yahoo group: skywavesmw
Date: 2006-08-08 05:44:53 UTC
From: John Faulkner
Topic: 828 Message: 828

Sorry if this is dragging on a bit but the mystery thickens.

David Towers sent me a URL this morning which would appear to suggest 4VAM is on the air. Their
website http://www.metropolehaiti.com/metropole/pageaudio.phtml?808065 has real audio streaming and
archives of recent broadcasts. Although I can't get the streams to play on my players this would
appear to suggest 4VAM is on the air.

Due to the uncertainty of all of this and the fact I will probably never find out which station I
had, I may have to let this one go. My French is probably not sufficient to contact the station to
ask if they can check my recording, though I might as well try.

It still seems too much of a conincidence that CFMB should be playing a recording of 4VAM who also
use this frequency.

If anybody wants to hear the recording again, click on the two links below.

Clear 4VAM ID ... http://www.skywaves.info/mw/1280-CFMB-4VAM-0404-06-08-06.mp3

More of the 4VAM signal ... http://www.skywaves.info/mw/1280-0404-06-08-06.mp3

Thanks

John

CFMB's reply ...

Hello,

CFMB broadcasts in Creole overnight Saturdays into Sundays, so it is very
probable that you were listening to us. Although it is possible that we
featured audio content from 4VAM, it was not a simulcast with them.

I am also surpirised that our signal travelled so far on the morning of
August 6th, since we were broadcasting on our standby transmitter at only
10,000 watts. Normally, we are on 1280kHz with our 50,000 watt transmitter,
which required maintenance this past weekend.

Regards,

Lui Valente
CFMB

1590 WARV Warwick RI. ID "15-90 WARV" by YL, quickly repeated by OM. Religious programming. Weak 0330 11/08 JF

Like Steve, I have been struggling to find IDs. The signals I have been chasing have been generally
too weak. Last night was no exception, though I believe I had R Rafaela on 1470. I do not feel
comfortable logging it just because I heard a single clear mention of the word "Rafaela" though.
http://www.skywaves.info/mw/rafaela.mp3 But then ...

I monitored 1590 from 01:05, following some 'live' listening on 1470, which revealed a weak Brazilian which did not want to ID for me. Two stations were heard, a Latin and a North American.
Both were very weak / in the noise for an hour. The North American seemed to be carrying sports
though I cannot be sure. At 03:25 the North American lifted up and was talking about hospitals and
"permanent life damage"! The noise level suddenly dropped around this time and the Spanish station
became much clearer too. God became dominant by 03:30 and reveled an ID - WARV! (There is a God!)

By 04:00 there was a jumble of North Americans but still nothing with any real strength.

Fade-out around 05:30.

Good DX!

834. Potential Message Delivery Problems - Messages which include URLs

Yahoo group: skywavesmw
Date: 2006-08-18 18:24:01 UTC
From: John Faulkner
Topic: 834 Message: 834

Another DX group has recently been having frequent problems with members' messages failing to appear. It seems many of the messages which were deleted / blocked purely because they contained URLs. Not all members had this problem though which suggests it may have been related to the individual's ISP, though I am not clear on this. This appears to be the result of more vigorous spam checking and it is beginning to affect some posts on here. But this is not just a group problem, posts to individuals are also being affected.

In future, instead of posting URLs in full, you might be better to post them thus: "skywaves.info/whatever" and allow the individual to add the "http, colon and double slash" bit themselves. It is just our ISPs waging war on the spammers. Sadly it will affect 'normal' emails too.

Thanks

John

835. Strange condx & 177 LW (gone?).

From: Joop Prosée
Topic: 835 Message: 835

Hi 4 all,

Last night, something peculiar happened on the LW.
At 00h30GMT (18-06) I switched on my ATS803a, 153
Donebach was completely gone and Brasov(ROM) had
fully taken over //1179kHz. I've witnessed this more
often, but.... 207 Aholming was very weak and was
weak in the background of a rather strong 207 RUV(ISL).
189 RUV //207 was surprisingly strong. Comparing
between RUV 189 and RUV 207 showed to my surprise, that
contrary to what is normal here at my QTH, 207 came from
another direction as 189. 189 came in from its "normal"
direction, but 207 came in much more from the north !!
Iceland is at 320° and 189 came in as such. To get 207
at its strongest signal I had to point towards 350° !
Turning back to 320° at 207kHz the signal almost
disappeared completely.
I have never witnessed such difference in bearing with
these two RUV TX's, wich are daily guests here.

Another point, was the absence this night of Berlin 177kHz.
Also this afternoon 177 was still off air. 171(Kaliningrad)
came in, so I have no doubts over my receiver.

Interesting Joop,

Conditions have been fairly quiet. At the time you were getting the unusual reception it is is
possible you caught the onset of the minor strom conditions. See
http://sec.noaa.gov/alerts/k-index.html

This could be a very exciting season as we are entering the solar minimum. If you catch signals at
the immediate onset of a storm which had followed several days of quiet solar activity, you may well
be in for a treat. This is what could have happened.

Cheers

John

840. new countries?

Yahoo group: skywavesmw
Date: 2006-08-19 21:38:58 UTC
From: Julian Hardstone
Topic: 840 Message: 840

A book review* in today's Independent (newspaper) looks at some newly independent states within the territory of the former USSR.

Quote "On the fringes of the former USSR, entire 'countries' exist which pay little heed to official borders" - Transdniester : Abkhazia : Ferghana Valley : Birobidzhan : Nagorno-Karabakh

So in Transdniester, it seems we have a de facto 'new country' within Europe, between the Dniester River in Moldova, and the border with Ukraine.
Quote "...unilaterally declared independence... Europe's newest fully fledged country, with its own constitution, president, army, flag, passports and currency"
Presumably it also has its own broadcasting service. Maybe also do the other 'countries'.

Any comments? - Julian

* "Satellites: Photographs from the Fringes of the Former Soviet Union" - Jonas Bendiksen

It's not recognized by the world community as far as I now. The same holds true for the other "countries"

In Abkhazia still a lot of unrest is going on, I am not certain if even Russia official recognized it as an independent country, but they support it since it broke away from Georgia. All ugly politics there. I fear the average people got caught between the lines. Does the book tell anything about the current state of affairs?

Jurgen

The book review makes exactly those same points, J?rgen. All these 'countries' are self-proclaimed, or not proclaimed at all, but it seems inevitable that they have, or soon will have, their own broadcast services. I guess they're not all transmitting Mayak! - so what radio stations should we be looking for?

Continuing in the "World's Unluckiest DXer" theme (MWN September 2006): Last night I thought I
would try a mobile DX session on Beeley Moor, using a 300m beverage.

I was listening to the James Whale show on TalkSport as I drove to Beeley Moor. He was discussing
his UFO show (on tonight at 10am if anybody's interested) and a listener in Oldham phoned in to say
he had seen something very unusual in the skies to the east of Oldham, where he lived. This would
be around 21:30GMT (the time was now 23:00). He had been watching some strange white lights darting
about the sky. He said some planes were also in the vicinity of the lights and appeared to be
tracking them. At one point some other white lights were seen to shoot out from the main area of
light and travel upwards into the sky at great speed, closely followed by lights of other colours.

This was not the sort of thing I did not particularly want to hear while driving to a dark, lonely
moor by myself, however, I pursued my DXing activities and stretched out the beverage across the
moor and set up the receiver in the car. The purpose of this DX trip was to try Dream software with
a beverage. I have just bought another inverter for the car. This is a new one from Maplin,
designed specially for laptops and has switchable outputs up to 24VDC. Maplin currently have them
on offer ...

maplin.co.uk/Module.aspx?ModuleNo=44736&DOY=12m8&criteria=SALE (add the http and 'w's of course)

Thinking about the supposed UFO sightings (and dismissing it as typical James Whale crap) I looked into the night sky in the general direction of Greater Manchester and Oldham, some 30 miles away. I could clearly see the sodium glow from the city lights. Then I suddenly remembered something else the caller had said, he commented that the strange lights could be seen clearly in the direction of Rochdale. Being familiar with the Greater Manchester area I realised that Rochdale was roughly to the north of Oldham, not the east. Surely this couldn't be an aurora, could it? COULD IT? Extremely bad timing if so, I carried on, regardless, and powered up the laptop and tuned around. The band was almost dead, but for a very weak WWZN 1510 and an equally weak CBG 1400. The only station present in the X band was WWRU 1660, also very weak. I gave up after only a few minutes and after carrying out several frequency spot-checks. I wound the wire back in and was back home for 02:30 GMT. I have never known such poor conditions on a beverage.

On arriving home I connected to the internet and checked the Kiruna magnetometer. Bang! Their equipment had indeed picked up a major disturbance about half an hour prior to me setting out for the DX trip. Kiruna was registering -1200 which is probably the lowest I have seen on their site. I guess the storm had only affected higher lattitudes as when I conected my rx back to the ewe at home I could still hear a fair number of North American stations, though the Caribbean and South America had begin to dominate. Odd though how my DX reception was better on the ewe than the beverage only an hour earlier.

Boulder only gave out K4s for the relevant period and the UK AuroraWatch website at Lancaster University barely registered a 'blip' at the time. So was this an aurora? Or were there indeed UFOs in the skies above Rochdale? I'll leave this one for Mulder and Scully, or the idiots who listen to the James Whale show (ahem).

Good DX!

Dave - I can sympathise - major RFI generator 8-[

I made quite a good improvement to mine - see my article somewhere in the 'files' section.

Ideally one wants a 'quiet' PSU, RFI and acoustically, but I don't suppose they are made. I may yet re-visit my PSU filtering and try to get it better, or I may get a modern laptop (just to use with DREAM) - they are completely quiet. The mains units make a bit of RFI, but they are generally a lot quieter than desktop PC's and can be successfully filtered

Amusing little programme today on BBC R4
"Border Blaster"
"The story of medical charlatan Dr JR Brinkley, whose bizarre medical technique to cure impotence led to the creation of the first pirate radio station - the border blaster - on the Mexican side of the Rio Grande in the 1920s"
http://www.bbc.co.uk/radio4/factual/pip/ozy67/

Last week there was an interesting programme about BBC External Services and the battle for the airwaves during the cold war years. This was particularly nostalgic for me, when they recalled the Skelton transmitter as I knew it.
"Political Interference"
"Roger Bolton recalls an invisible Cold War battle between Soviet bloc radio engineers, who tried to jam radio signals from the West, and their counterparts in the West"
http://www.bbc.co.uk/radio4/itsmystory/pip/d2lky/

Both are available to 'listen again' online

Hi Julian
yes I saw your article and will have a go at building a filter.
question!
Is your filter an external one in the mains feed to the PC, or did you
fit internally into the PC?

My QRM is definitely loud on the mains socket and mains lead so it
should prove beneficial.
I will advise of the results
regards
dave

1280 WCMN Noti Uno, Arecibo PR. ID, sounded like "Notiuno, la numero uno __?__ noticias" Talk format Weak 0500 23/08 JF

1280 VSB2 Hamilton, Bermuda. Presumed. Religious talk and hymns. Mixing WCMN. Weak 04:55 23/08 JF

1540 ZNS R Bahamas, Nassau. Lengthy discussion (religion?), ID and address. Difficult copy Weak 0109 23/08 JF

Not much of interest overnight and what little I did hear was a struggle. Channels were more splattery than usual, probably due to the recent disturbances.

By the way, it seems there was no visible aurora in the UK the other night, but the geomagnetic field had swung strongly southwards at the time. Might account for my lack of North American DX while out on the moors. Maybe the improvement in signals an hour later was auroral.

Good DX all!

I built the filter into the mains lead, in a plastic box.

If you are connecting a Rx to the PC, e.g. for DREAM, you will find you need also to filter every connection between Rx and PC, and maybe also all other connections to the Rx, and especially the aerial lead. I have used
ferrite toroids and wound the various connections through them. You can use Maplin QT26 at ?1.49, or I recommend RS 212-0926, which I keep in stock and can supply at ?1.50. You can feed, say, the DC supply lead + the audio line lead thro one toroid, 9 turns should suffice.

From: Joop Prosée
Topic: 855 Message: 855

Hi all,

From a friend I got a Sony TR912 transistor radio.
The radio is in a rather well working condition.
I tried to find out more about this model, but the only
thing i could find on the internet, was the fact that
the production of this model ceased in 1972 !

The radio has 2x SW-bands and MW, double speaker but
of course NOT stereo and only battery-feed.

Is there somebody in this group, who can tell me more
about this typical product from the sixties, or internet
adresses with info about this transistor radio from the
sixties, that I couldn't find ?

TNX de: JOOP.

Great story that, John. Funny thing, I was listening to Steve Wright Monday afternoon R2, and he said he once phoned in to a late night talk show presented by a DJ friend of his and to liven up discussion he said he had seen strange UFO like lights in the sky over Hendon and wondered if anyone else had seen them! This was just a joke but it prompted callers to ring in saying the'd just seen 'strange lights in the sky' too!!

Regards
Richard

Interesting! :0) Well, I didn't see any little green men while I was out beveraging. I did saw a few foxes and rabbits though (no badgers or deer on this occasion). I didn't catch the James Whale programme the following evening as I returned home late after a night out at a folk club. OK then, I had too much to drink! ;0) But I leant that there had NOT been an aurora that evening, however, the geomagnetic fiend had swung strongly southward because of the disturbance, hence my lack of any decent reception. Conditions have returned to being quiet now but high lattitude reception still seems yet to recover.

Overnight last night produced very little. After a quick tune around I recorded 1390 for the duration and heard a weak Latin and a weak WEGP. A second north American station was there but I never ID'd it.

Conditions are still very quiet now so I anticipate a better night to come.

Good DX all!

John

JH> we be looking for?

'New country' in Transdniester is Pridnestrovya.
As well as other it not recognized by the world community, but
it is actively supported by Russia which by any methods tries to save
his influencing in ex USSR countries (including destabilization of
situation for that, then to send the Russian peacemakers there).

Radio Pridnestrovya broadcasts from territory of Pridnestrovya,
although it in many lists of stations is located in Moldova.
http://www.president-pmr.org/radio/

Programs of Radio Pridnestrovya on freq 549 kHz to Ukraine are mostly
blocked by a few transmitters of UR 2 Promin in Ukraine.

Obviously Pridnestrovya did not co-ordinate international broadcasting
with other countries on this frequency.

Two north Americans present, both talkers. I think one was religious. Weak
0059 29/08 JF
1140 CBI Sydney NS. CBC Programme // others Fair 0034 29/08 JF

Far better conditions overnight!

I monitored 1060 for the beginning of the night. There were two talk stations before 01:00 GMT.
One sounded religious, noted at 00:55, but it was not hot gospelling if so. At 01:40 I heard
mellow, insirational-sounding songs. The splatter was heavy so it was difficult to be sure. Of
course, the splatter was worse around the tops of the hour.

My recording of a tentative KYW ID is here ...

http://www .skywaves.info/mw/1060-0059-29-08-06.mp3

Does anybody else hear this?

There were two stations on 1270 which I followed from 0445 but to no avail. One was chat and the
other folk.

Hi all,

maybe interesting for you:

today (8.sept.2006) I heard also VOA radio 4960kHz, I think from Sao Tome, Africa(?)

I also heard unid station spain talking at 1680kHz yesterday cca at 1-1.30UTC, but I dont know if is not pirate... but I dont about spain talking pirate here with spain type music (or Latin america type music).

Maybe interesting is also russian radio at 261kHz and 270kHz (our transmitter Topolna was off) with the same program: I think that I heard russian transmission from Siberia, Novosibirsk. (other idea is Orenburg)

I also heard 279kHz, it is probably R. Urala, Jekaterinburg in this same time.

I use DX394 and my homemade active preselector or homemade balun (better: "unun") 1:9 and longwire 45m.

Good signal was also with Degen DE1103....

I heard also unid station at cca 510kHz..do you know about any broadcasts stations here???

1575kHz: DRM ID station from germany but my computer is slow...

do you know about other QRGs for DRM in LW or MW band???

Best regards, Jara "Rat"

870. Conditions while driving home from France

Yahoo group: skywavesmw
Date: 2006-09-09 20:16:03 UTC
From: John Faulkner
Topic: 870 Message: 870

I returned from France during the early hours of this morning. I arrived home just before 02:00
following a sixteen hour drive from Brittany! I noted many hets across medium wave on the car radio
during my drive back up through central England, particularly while listening to 1071. I tuned
around on the 7030 shortly after this and once settled back at home. There were many North Americans coming in. All were quite weak but very clear due to unusually low noise levels. Most
notable was CFRB on 1010 dominating WINS. Many of 'the usual suspects' were present and 1470 was a
real jumble.

Good DX!

John

871. Ashfield DX Log: 13-09-06

Yahoo group: skywavesmw

1370 WDEA Ellsworth ME. "The WDEA Red Sox Radio Network" ID. Baseball game
commentary. Fair 2320 12/09 JF
1480 WSAR Fall River MA. Presumed with NFL sports. Fair 2323 12/09 JF
1420 YVNZ R Marabina, Maracaibo. "Marabina" IDs between Latin pops. Full toh ID
at 0500. Weak 0430 13/09 JF

A promising start before 23:00 GMT with several north Americans at reasonable strength but then it
all went downhill, at least on the channel I recorded ... 1420kHz.

1420 started off with a Latin station mixing with C&W songs at 23:37. The C&W station would probably be CKDY. A talk station appeared minutes later and stayed on the channel throughout most
of the night. I never caught an ID. Presumed CKDY gradually faded out altogether while the talk
station stayed put, but this too faded shortly after 04:00 when Marabina took over. This faded out
just before 06:00.

Other, less common channels with North American DX, heard before 00:00, included 1360 & 1460. 1380
had R Corporacion.

Good DX!

Not much 'live' listening done so far this week but I managed half an hour between 05:30 - 06:00
this morning, generally flicking between 1250 and 1420.

1250 had a mixture of a lively Latin station and presumed CJYE with boy-band style Godsongs.

1420 was, as last night, likely CKDY with country music, R Marabina (which offers regular IDs) and
the English talk station.

and all-in-all, it was a tricky night for IDs.

Other bits and pieces included English religion at 23:00 on 1400. At local sunrise there was
English talk on 1460, suspected Disney on 1290 but no //s to check with, 1110 had a US talker and an
interesting one on 1470 - I *think* I heard snippets of Chinese music and talk on 1470 between 04:25
and 05:05. This from my overnight recording, however it was too weak to be conclusive.

As is often the case, some Brazilian activity was present on 1470 around 22:30 - 23:00.

Good DX!

Hi Tim,

Kaliningrad (Bolshakovo) is no longer authorized to be on the air except for two hours per day: 1700-1900 UTC (summer). On 1 November 2007, this tx will be taken out of service completly. Sitkunai in Lithuania is authorized to be on at any time between 1900 and 1700, but the 500kW tx that they mainly use on 1386 is operating on 666 at daytime (until 1700).

Yes, the X band was indeed very poor overnight on the two brief occasions I listened. This portion
at the top of the band has a characteristic all of it's own and can often bear no relation at all
with the rest of the medium wave band.

Cheers

John

(Resending as I think the URL embedded below has been stopping this getting through. (Third attempt!)

---

870 WWL New Orleans LA. Full ID at half hour. "This is 8-70 WWL New Orleans and One-o-five three WWL FM".
Weak 0530 15/09 JF

1020 KDKA Pittsburgh PA. Short KDKA ID jingle. News/talk
Weak 0253 15/09 JF

1110 WBT Charlotte NC. Weather, "Newstalk 11-10 WBT" ID after news, then "WBT Timesaver Traffic". Fair 0305 15/09 JF

1420 UNID Sporting News Radio. WDJA? Ref. December 2005 log. Topaz lists them with business news / Money Watch
Weak 0506 15/09 JF

1520 WWKB Buffalo NY. This is Buffalo's Left Channel, AM 15-20 WWKB Buffalo. CNN Radio news. V Good 0300 15/09 JF

1490 was the first channel I recorded between 00:00 and 02:40. English nostalgia dominated but an English talk station popped up there occasionally. There was an ID at 00:30 but it was was too weak to make out. YL news peaked just after 01:00. Nostalgia back in full force at 01:40 with lengthy discussions about the songs played. V weak ID at 02:04 -
" skywaves.info/mw/1490-0204-15-09-06.mp3 "
Add the http, the colon and the double slash.
I can hear two call letters here. Maybe someone can hear something but it's rather weak.

From 03:43 I recorded 1300 as I could hear TWO English talk stations. It is extremely difficult for me to hear anything on 1300 due to splatter from 1296 and 1305. DRM soon killed the possibility of any toh ID.

Then on to 1420 shortly after 05:00 to hear the end of ABC News and CNN Radio news plus a Sporting News Radio jingle. Who carries this on 1420?

Finally I recorded 1250 from 05:40 but an early fade-out at 05:50 spoilt that one. A lively Latin and the God station were there again but this time with the addition of an English talker.

I was hoping to have a bagful of IDs from this but I was unlucky, so a little 'live' DXing bagged the above five stations. WWKB was particularly good overnight.

Others of interest I heard, agian which didn't ID included 680 with news, 760 talk, 840 - probably WHAS, 890 sports, 960 oldies, 1050 sports and oldies, 1060 jazz, 1270 slow pops, English talk and a Latin, 1310 talk and oldies, 1360 talk, 1410 sports, 1460 talk, 1480 - two English, 1510 two English, 1560 talk and 1580 talk.

I also heard a CBC ID on 1420!

That's it! Good DX!

883. V good conditions but unlucky tonight

Yahoo group: skywavesmw
Date: 2006-09-16 10:50:33 UTC
From: John Faulkner
Topic: 883 Message: 883

It was indeed a very good night on medium wave - for some.

I recorded 1420 and 1160 overnight. Plenty of interest on each channel but every station managed to
fade out at the top and bottom of each hour.

1420 had C&W, talk, sports and of course (presumed) R Marabina.

Checking 1300 and 1310 around 02:00 was fruitless. I wish someone would set fire to Magic AM's
transmitter on 1305 as it is a real pest here. I can hear speech on both channels but it's almost
impossible to decipher. The dominant station on 1300 tonight had a woman talking for most of the
time.

I heard English talk on 1160 at 05:35. I recorded this only to hear it promptly fade out and not
return.

Hmmmph!

In Scotland, DXers had reception around the Great Lakes, Michigan Illinois and Wisconsin, and also
plenty of west coast DX in the far north of Scotland.

Good DX!

John

Last night I made a quick check, but found nothing, not even the het's of 1510 or 1520. A couple a days ago I got 1660 WGIT with its typical music but not 1620.

Good reception in Leicestershire after Albania closed down for the night.
A mixture of slow and rapid fades over 2 hours night listening, but not
so signal was lost .
Strength S9 + at best
Daytime reception 07:00utc, naturally lower at S5/6 but above the high
noise level of S4 and good listening quality.
I will observe throughout the day and check again around midday.
regards

620 CKCM Grand Falls NL. Not heard this for a while. VOCM IDs & country music
Fair 0105 23/09 JF
1490 WBAE Portland ME. "AM 14 hundred and AM 14-90 The Bay" ID between
nostalgic crooning Weak 0021 23/09 JF

1490 was fascinating to listen to around 00:00 GMT. WBAE was the dominant at this time but there
were at least two others there. One playing more traditional 'oldies' from the 60s and another
playing the TV theme from "Hill Street Blues". Gospel music was also heard shortly before 01:00.

I also tried to ID WLOB on 1310 at various times. I heard a reference to 'Portland, Maine' this
time but I'd still like to get the ID. 1300 also had the usual talker. Two north Americans talkers
were fighting on 1480. 1420 also had talk - another one which keeps eluding me.

Good DX!

Hi All,

On the wonderful site of Ruud Brand & Hepke van der Ploeg you can see more interesting pic's of the "Trintelhaven" 1395 TX & QTH !

Go to : <www.radiowereld.nl/fmtv/> and look at : "Middengolf(AM) 531-1611kHz" [Mediumwave(AM)] for the 1395kHz frequency.
(Not to speak of the very extended info of all Dutch FM-freq's).

This QTH is situated alongside the 30km dike that goes from Enkhuizen to Lelystad, approx. 13km(8mls) south-east of Enkhuizen and is completely surrounded by vast water planes.
Reception of this TX must be quite easy in vast eastern parts of the UK, considering that 1152 Norwich TX with 800 Watts is always coming in (at daytimes) with a nice signal here in the north-western part of Holland, while "Trintelhaven" has (as far as I remember) 40kW ERP(!).

Idiotic that the 40kW Trintelhaven TX is switched off in favour of the 500/1000kW Albanian Fllakë-TX at certain hours !! JOOP.

1480 WMDD Tropical, Fajardo PR. "Ritmo de la ___?___ Tropical" Weak 0228 25/09 JF
1520 WVOZ R Voz, San Juan PR. Salsa music. "R Voz" IDs Weak 0235 25/09 JF

A Caribbean morning! The above loggings were extracted from my overnight recording.

On the 24th I was monitoring 1330. In addition to WRCA there were THREE Latin stations, I believe
all were Spanish but they were very weak. I have been hearing them for the last few nights. The
recent geomagnetic disturbances have enhanced these stations too which probably points to them being
from a more southerly direction.

One appeared to be more or less on frequency. The other two produced heterodynes of 139Hz and 270Hz
but both had audio.

Their offsets would thus be 1329.730 and 1329.861. (I used a calculator so this WILL be correct!
;0)

Good DX!

Hi Mark,

Some nice loggings there Mark!

I have been continuing to record chosen frequencies overnight with hardly any "live" listening.
Problem is that although I am hearing a few bits (mostly rather weak) I am not catching any IDs.

This morning I was on 1320. CKEC was dominant, but only just. I'm fairly sure there was a second
north American station on there with sports. There was also a South American (Spanish) station with
serious talk at 01:00.

The previous night I recorded 1310 to try and ID the South American on there but it was to no avail.

South Korea, India and China are being reported by UK members of other groups which could be a good
indicator of things to come. The geomagnetic activity has been very quiet today too.

Good DX!

John

1440 WJAE Westbrook ME. "It's no-nonsense sports" "Sports radio 14-40, WJAB". "Sporting News Radio" jingle. Weak 0606 28/09 JF
1540 WNWR Philadelphia PA. First heard at 23:00 with deep religious service, ad at 2312, then
full sign off routing and IDs before national anthem at 2313. ID included "50 thousand
watts . New World Radio" and "WNWR" call. Weak 2313 27/09 JF

The MW band was in much better shape overnight with better signals (and more of them) from North
America than in recent nights. i.e.

960 Music heard.
970 EE talker, likely WZAN
1250 Pile-up. Latin and NAs including EE sports. Likely WEAE ID heard.
1270 had presumed CJCB, poss WXYT with sports plus a Latin.
1280 WFAU and another - Noti Uno perhaps
1420 The usual talker and country station.
1430 WENE plus EE talker - WXKS?.
1440 WJAE at LSR - Lux was ewe'd out completely!
1450 presumed CFAB with AVR type country programme.
1480 Two EE stations plus dominant WMDD.
1490 presumed WBAE nostalgia.
1500 Two EE stations after 23:00
1510 had a second NA - prob WLAC.
1560 WQEW Disney - Good at times!
1580 UNID.

+ lots more around LSR.

I have been checking many channels after 21:00 for daytimers and have heard convincing activity on
670, 680, 760, 780, 1280, 1500 & 1540. The latter produced WNWR which is a personal first.
Recording at http://skywaves.info/documents/MW/1540 WNWR Philadelphia PA 2312 27-09-06.mp3

Good DX!

Topic: 896 Message: 896

1380 CKLC Kingston ON. "Now another long -?- begins, your all-time favourites . on 13-80 CKLC" Weak 0202 29/09 JF
1450 WKXW Atlantic City NJ. "ESPN Radio, WKXW Atlantic City" heard at the top of the hour Weak 2300 28/09 JF
1480 WSAR Fall River MA. Weather "showers", Wwith meteorologist Rod -?- and me Carloline -?- . with the new WSAR" Weak 0302 29/09 JF

Summary:

Listening to Spanish station on 1280 at 22:00 but no obvious ID heard.

Portuguese noted on 1520 at 22:24. Possible ID heard but did not match anything on the Brazil MW
list. Too weak to bother with I think.

WNWR was heard once again signing off with the national anthem at 23:13.

Recorded 1450 until 02:10. Three North American stations were heard. One with C&W, one with a
phone-in and WKXW. The phone-in was heard at 00:26, discussing the 911 emergency service and was
mixing with WKXW. This ran over the half-hour without an ID!

Then to 1420 for another mix of stations. An Englush talk station mixing with a Spanish talker,
presumably not R Marabina. (Marabina appeared shortly after 05:00 and became briefly good after
06:00)

Good DX!

1470 WNYY Ithaca NY. ID at toh. "This is 14-70 WNYY" Weak 2300 29/09 JF

I recorded 1470 overnight in the hope of hearing CJVB around sunrise but the noise on this channel
is becoming a problem. I don't know the source as it doesn't seem to affect many channels. I will
add some more chokes when I rebuild the ewe in a few days.

WNYY was caught at 23:00 on 1470 with a brief ID at the top of the hour. You can hear the mush on
this.

http://skywaves.info/documents/MW/1470%20WNYY%202300%2029-09-06.mp3

A correction to WKXW on 1450 - I believe this should have been WENJ (I'm sure I heard WKXW?) 1450
is usually dominated by this station with ESPN news.

Two nights ago I recorded an ID on 1420 which appears to be WKCW in Warrenton VA. I don't know what
to make of this. Here is the recording ...

http://www.skywaves.info/mw/1420-WKCW-0400-29-09-06.mp3

MW DXer Andrew Brade and myself can hear the WKCW ID at 6 seconds, but since this station is
supposed to dip down to 66 watts at night and broadcast solely in Spanish, I am beginning to wonder.
There is also a further possible ID earlier on in that recording - at 2 seconds I can hear something
which sounds like "14-20 W---". Also Jan Alvestad guesses this may be another station - WACK.

I have emailed a few other members for further opinion and also the AMDX group in America (who
should know more about this station). I suspect this logging may be scrapped though unless
something more concrete comes through. Just too many uncertainties.

The expression "clutching at straws" comes to mind. ;0)

Good DX!

Hello Mark!

My coax feeder has a couple of ferrite chokes in-line to restrict external noise getting into the receiver. The ferrite rings I use are of a certain specification which I cannot quote at the moment. Julian Hardstone has the details of these and can advise/supply them.

Julian has already copmpleted a couple of articles for the Skywaves site which relate to curing different interference types. These will be published soon.

My chokes involve the winding of a dozen or so turns of RG174 coax around the ferrite ring (as many as you can) then inserting one or more of these into appropriate points along the length of the coax feeder.

I have some more interference now but I think Dream (or the laptop) is inducing some of it with its audio/signal processing.

Julian is the best bod to ask. :0) He cured my interference!

Watch out for more articles on Skywaves along the way.

Cheers

John

The Medium Wave Circle is pleased to announce the publication of two more new CDs of interest to
radio enthusiasts in addition to the three we published earlier this year.

The two new CDs are:

* Offshore Radio Collection CD

* Reprint CD

If you are interested in MW radio or Offshore Radio these could be for you.

To find out more about the new CDs and how to order them please click here:
http://www.mwcircle.org/mcd.htm#reprint
or
http://www.mwcircle.org/mcd.htm#offshore

They can be ordered by post or preferably on-line via the Circle's on-line shop which accepts credit
card or Paypal at www.mwcircle.org/shop.htm .

All previous CDs, including Radio Caroline 1983-1987 and Laser 558 1984-1986, are still available.

Enjoy!

Hello Pat

Well done on the Chinese station on 1470. This could be CJVB in Vancouver BC.

However, it seems one or two people have heard Chinese on here when conditions haven't been appropriate for west coast reception. It is thought that a previously unlogged US or Canadian station may be carrying ethnic programming on here now but nobody knows who. I think conditions were much better this morning than recently so I have my fingers crossed for you that you heard CJVB. If it is CJVB they have a full English ID at the top of the hour.

Good DX!

John

650 CKAC Gander NL. VOCM IDs and C&W music Weak 0420 05/10 JF

I didn't begin recording until after 0400 so I don't know if I missed good night. Driving across
the Peak District during the early hours revealed many large hets to European stations. Even in
Manchester I could just about make out WBAL on 1090 as it hammered 1089. This was far less pronounced on the eastern side of the Peak District. 1070 CBA was audible in Manchester too.

I recorded 1470, looking for CJVB. I heard R Formula, Mexico and WLAM.

Good DX!

After hearing R Formula giving out their call letters on 1470 this morning ...

skywaves.info/mw/formula.mp3

... I wondered how easy it would be to misinterpret these letters as there seem to be more than one
R Forumlas heard on 1470 in Finland. Their calls are fairly similar. XEAI and XEHI. Ref: I don't
have any further information about the loggings other than seeing them in the listing "Central
American Stations Heard In Finland: 2004 - 2006" which can be found here ...
dxing.info/logs/finland_2004_2005_centralamerica_mw.dx

So, is my recording that of XEAI or XEHI?

Maybe these links will be of use ...

en.wikipedia.org/wiki/Spanish_dialects_and_varieties

spanish.about.com/cs/forbeginners/a/beg_alphabet.htm

Hi

don't know if it was Formula from Mexico or CBN Lima, but this morning there was a Spanish programme on sexual education at 0525 utc.(1470 khz Medium Waves)
Maybe someone else heard it (and took notes !)

cheers de Pat

660 WFAN New York NY. "Sports Radio The Fan" sports report Good 0029 06/10 JF
1420 CKDY Digby NS. AVR Network IDs and country music Fair 2323 05/10 JF
1560 UNID ESPN Radio cominsting the channel. Good 2355 05/10 JF

--

Have 1560 WQEW gone ESPN? I heard ESPN sports dominating 1560 around midnight. The signal was
pretty good and didn't coincide with any obvious Disney programming (though I did hear the Village
People's YMCA on its own on 1560 at one point).

At local sunrise there was a station on 1600 playing non-stop Abba tracks. I wonder who that could
be.

My only live listening points were between 00:00 and 01:00 and 05:00 and 06:00. I heard several
stations of interest which would have been 'personal first's, had I been able to identify them. For
the hours inbetween I recorded 960 in the hope of hearing CKWS or WEAV. Instead I got mountains of
splatter and everytime the rock station there (presumably CHNS) peaked it was during mid-song. I
didn't hear one single bit of speech.

Unlucky or what?

Good DX!

Topic: 914 Message: 914

Has anybody ever tried two of these, phased against each other?

Would they need to be far apart?

I plan to add a second ewe antenna on the garden and re-position the existing one. One will point
NW and the other SW. Just wondered if they could be phased against each other to minimise Eurosplatter.

> Would they need to be far apart?

You should be able to use any antenna for phasing.

But as the name suggest, you need a phase difference of both anttenas to be useful. And that means they need to be apart, the more the better.

No phase difference = it only can cancel itself

Last year with my 300m Beverrage I could hear a delay in fading when listening simultanously with it on my R390 and a Sangean with its builtin antenna 15m away from the beverage endpoint.

I see. But if they're at different angles they would phase out the common signals wouldn't they?
i.e. those high powered stations from Europe which would be receivable on both antennas to a degree,
and hopefully leave the DX intact since they would be pointing in different directions.

In my 'research' on the internet I have found four ewes close together which I believe is almost a
K9AY (?). Or perhaps I should just consider a K9AY - if the garden is big enough.
hard-core-dx.com/nordicdx/antenna/loop/k9ay/index.html (add www, etc.)

This one is interesting ...

A bit definitely, but it affects the wanted signal also, and that you want to increase instead of attenuate. If you can use the phase to attenuate the unwanted but increase the wanted signal, you'd be much better off.

Assume you rotate the antenna while it stays at the same spot, it would not result in a different phase, only the amplitude will be higher or lower.

Very interesting.
He put both 100m apart and gets a pretty sharp lobe.
100m results in 120 degree phase difference at 1000kHz

It looks that his charts were calculated, would be nice to see real measurements.

Thanks Jurgen.

I think I must try some simple phasing against a short longwire to begin with. Now there's a contradiction! (Or maybe I'll try a long shortwire)

My garden is only a measly 10m x 10m so I am restricted.

Topic: 919 Message: 919

680 CFTR Toronto ON. Canadian temperatures then ID "6-80 newstime 1:30". Frequent "6-80 News" IDs Fair 0530 07/10 JF
680 WRKO Boston MA. ID at top of hour - "You're listening to Boston's Talk Station - WRKO" Fair 0600 07/10 JF
970 WGAN Portland ME. "9-70 WGAN" IDs, talk Fair 0546 07/10 JF
1460 WDDY Albany NY. Radio Disney IDs, pops Weak 0342 07/10 JF

Much better conditions around dawn. Midnight seemed poor by comparison. Still struggling for
those IDs though. Nothing new heard overnight. :0(

920 had C&W around 05:20. Probably CKNS rather than CFRY.
1470 had gospel on 1470 around midnight.
1480 had a second North American (sportstalk) mixing WSAR and a Spanish station which I don't
think was WMDD. I ONLY IDd WSAR AS USUAL.
clip - skywaves.info/mw/1480-0552-07-10-06.mp3
1490 had two North Americans at 00:00 with news. Then a mixture of three stations - nostalgia,
60's oldies and talk. The usual thing happened - peak in signal mid-song otherwise
back-to-back music and complete fade-outs at the top of the hour.
1580 was an English talker for me through the night. I hear talk here quite often.

Good DX!

Hi all,

a few interesting signals around this morning.

Highlight XEW Mexico City on 900 khz, initially I had thought this was a spanish station it was so strong! OM heard with references to the name of the show "LOS AMOS DEL CAMINO" and mentions of a bus crash outside the city. Same programme weaker and delayed was XEWB from Veracruz.

Other interesing signals were Cadena Habana on 1080 / 1100 / and 1120 (are two of these firsts?).

The usual east coast US /Canadians were all in. Alas a lot of stuff didnt id - several stations mixing on 1310 for instance.

Heres what made it int he log;

530 RVCI South Caicos, Religion, om in SS talk. G 06:40 06/10/06
560 CHVO Spaniards Bay, NL, VOCM id, ads. G 00:48 06/10/06
650 WSM Nashville, TN, " Nashvilles Country Legend - 650 AM - WSM", country mx. G 06:39 06/10/06
730 CKAC Montreal QC, 2 om in ff talk. F 06:22 06/10/06
800 UNID FF programming. F 06:40 06/10/06
810 UNID C2C behind Radio Scotland, F 06:30 06/10/06
900 XEW Mexico DF, om in talk with mentions of Mexico, huge signal at times, thought it was European at first. vG 06:32 06/10/06
900 XEWB Veracruz // XEW slight delay. F 06:32 06/10/06
940 CINW Montreal QC, talk, sounded like C2C. G 06:08 06/10/06
1010 CFRB Toronto, ON, talk in mix with NY. F 06:10 06/10/06
1010 WINS New York, NY, id, rolling news. G 06:10 06/10/06
1030 WBZ Boston, MA, ad for tyre company and id. F/G 01:23 06/10/06
1060 WBIX Natick, MA, Talk about employment in south Boston. F/G 00:51 06/10/06
1060 XEEP Mexico DF, jazz // 6185, very good signal.

vG 06:16 06/10/06
1070 CBA Moncton NB, wx report. G 23:04 05/10/06
1080 CMCH R. Cadena Habana, Guines, yl in talk , latin mx, lots of mentions of Habana // 1100 / 1120, mixing WTIC. ** UK / Ireland First??** F 06:54 06/10/06
1080 WTIC Hartford CT, C2C with second station underneath. G 06:57 06/10/06
1100 CMCH R. Cadena Habana, La Habana, yl in talk , latin mx, lots of mentions of Habana // 1080 / 1120, in clear good peaks. G 06:54 06/10/06
1120 CMCH R. Cadena Habana, Artemisa, yl in talk , latin mx, lots of mentions of Habana // 1080 / 1100, very weak. ** UK / Ireland First??** Wk 07:05 06/10/06
1130 WBBR New York, NY, "this is Bloomberg Radio", ads after news. G 23:05 05/10/06
1140 CBI Sydney NS, News. G 23:03 05/10/06
1180 WHAM Rochester, NY, "News Radio 1180 WHAM", ads G 06:06 06/10/06
1180 CMBA R. Rebelde, Villa Maria, huge signal, latin mx and om in talk. vG 06:47 06/10/06
1200 CFGO Ottawa, ON, sports coverage, lots of mentions of Ottawa. G 23:07 05/10/06

Hi all,

some welcome signals this morning, particularly pleased to hear CHTN for the first time before it goes for good, a very difficult channel for me.

Also CHLN a new one.

The b.o.g was delayed until morning due to hordes of firework throwing teens... oh the joy of town life!.

Heres what got logged among strong signals from all the usual big east coasters.

550 CHLN Trois Rivieres, QC, om/ yl on phone // 730 CKAC. G 06:38 07/10/06
650 KNR Qeqertarsuaq, pop and om in Greenlandic. F 23:40 06/10/06
700 WLW Cincinnati, OH, "WLW.com" ads, news and id, struggle against local 693. F 01:04 07/10/06
720 CHTN Charlottetown PEI, "The New Ocean 100" behind local 720, good peak. G 06:34 07/10/06
730 CKAC Montreal, PQ, om/ yl on phone // 550 CHLN vG 06:38 07/10/06
750 CBGY Bonavista Bay, NL, yl in talk // 640 G 00:07 07/10/06
760 WJR Detroit, MI, talk show. F/G 06:46 07/10/06
810 CJVA Caraquet, NB, presumed, ff om with country mx same level as R. Scotland F/G 06:49 07/10/06
820 CHAM Hamilton, ON, presumed, country music. G 06:50 07/10/06
890 WLS Chicago, IL, presumed, talk show. Good peak over Cuba. G 06:55 07/10/06
930 WBEN Buffalo, NY, mixing with CJYQ, end of news, clear id. F 00:06 07/10/06
950 CKNB Campbellton, NB, "95 - CKNB" down in mix, id then pop. F 00:05 07/10/06
1090 WBAL "This is AM 10 -90 WBAL Baltimore" G 06:30 07/10/06
1110 WBT Charlotte, NC, lots of ids and weather, then back into C2C. " Im Bob Larsson on 1110 WBT" vG 07:05 07/10/06
1120 KMOX St. louis, MO, presumed, talk show. F 06:29 07/10/06
1300 Unid ESPN via??, sports. F 06:40 07/10/06
1330 Unid Country mx station via?? F/G 07:03 07/10/06

1440 WJAE Westbrook, ME, "Sports Radio WJAE", in mix.
Wk 06:06 07/10/06
1460 WDDY Albany, NY, disney programming then local id
" WDDY 1460" G 23:55 06/10/06
1480 WSAR Fall River, MA, Laura Ingraham show,
politics. F 23:49 06/10/06
1530 Unid Religion via??, dominant for a while. F
06:40 07/10/06
1590 WARV Warwick, RI, yl with id then news. F 23:30
06/10/06

Topic: 927 Message: 927

960 CHNS Halifax NS. "Nova Scotia has a new home . Hal 89.9 FM" Relay of their FM station
Weak 0612 08/10 JF

My laptop switched off midway through the night as I hadn't attached mains power. This in turn
corrupted the file which is a great shame as I recorded two different IDs on 1300! I'm sure one was
WERE and the other WJFK. I can't check to be certain now, unless anybody knows anyway how I can
(without cost) repair the damaged wav file?

Switching the laptop / Dream back on around sunrise produced CHNS on 960 and a likely WHAS on 840.

Good DX!

I am trying hard not to refer to myself as "The World's Unluckiest DXer" though I think I am really
living up to this name at the moment. In case you aren't aware of this, it is the title of an
article I wrote for the MWC bulletin. Steve Whitt asked I produce this for the summer months when
things were relatively quiet. You can view this article on the Skywaves website in the DXpeditions
> MW DXpeditions > North Midlands section.

I recorded 1470 for most of the night but switched to 1420 around local sunrise as nothing seemed to
be happening on 1470 and 1420 was revelaing a decent signal from something.

Playing back the recording had me scratching my head as I couldn't believe the signal strength of
the North American station. It managed to fade-out completely over 06:00 and dipped down again in
time for the conclusion of the CNN news bulletin. Scouting ahead to 06:30 revealed a beautiful ID -
"Buffalo's left channel, WWKB, Buffalo!" I appear to have recorded 1520 instead of 1420. Hmmmph!

Anyway, there weas something slightly more interesting happening on 1470 after all when I checked
around 04:00+. Though I didn't ID anything, I had Chinese on the channel. If anybody would like to
hear two snippets I recorded back-to-back then have a listen to ...

... skywaves.info/mw/1470-chinese.mp3

though there's nothing really to go on. It lasted for about an hour but had difficulty cutting
through the noise level most of this time.

Good DX!

Hi all,

very strong signals from CKEC 1320 around 22:15 last night held out promise that was a little premature...however the Caribbean seemed to be enhanced with a very loud WGIT making an early appearance. Like Paul in Troon I also had the (Female)latin talker on 1280 with Bermuda.

Unids included Brasil on 1350 / and a French talker on 1360 (wishful thinking says Haiti). Colombia was also probably heard on 650 - very loud but playing non stop latin music so no id.

At dawn things were in good shape and I was surprised to see KWKH 1130 put in an appearance.

I didnt get the b.o.g out this morning so probably missed some good stuff, however the EWE does very well in comparison.

Heres what was logged.

740 ZYH446 Radio Sociedade De Bahia, Salvador, id just past hour, om in talk. F 01:01 09/10/06
750 YVKS Radio Caracas, Caracas, "RCR-ay"id om in talk. F 02:00 09/10/06
760 HJAJ RCN, Barranquilla, om talkj, "RCN" id. F 01:45 09/10/06
800 VOWR St. John's NL, really bad ceilidh record which then went on to skip?. Ouch. G 06:51 09/10/06
880 WCBS New York, NY, rolling news, just getting past local 873 and Wales 882. F 06:55 09/10/06
890 WLS Chicago, IL, ads and id. F/G 07:13 09/10/06
1020 KDKA Pittsburgh, PA, yl talk show. F/G 06:39 09/10/06
1030 WBZ Boston, MA, id, ad for eatonapothecary.com, best signal ive ever had fromt his one. vG 06:38 09/10/06
1040 CJMS St. Constant, QC, presumed, om in FF talk. F 06:37 09/10/06
1130 KWKH Shreveport, LA, "Americas Truckin Network" show, same level as WBBR. G 06:41 09/10/06
1160 Unid Oldies station playing "Calendar Girl". F 06:40 09/10/06
1160 VSB3 Hamilton, Bermuda, tentative, talk about UN,

may well have been BBC down in mix. Wk 06:45 09/10/06
1280 VSB2 BBN Hamilton Bermuda, om in rlg talk then
rlg service, id later as Bible Broadcasting Network. F
23:09 08/10/06
1310 WLOB Portland, ME, id down in the mix and fox
news. Wk/F 07:05 09/10/06
1540 ZNS1 R. Bahamas, Nassau, om in talk, mixing CHIN.
F/G 22:40 08/10/06
1540 CHIN Toronto, ON, presumed, CRI programmes. G
23:40 08/10/06
1660 WGIT Canovanas, PR, sports. vG 22:14 08/10/06

Among others heard were WPTX 1690 and WTNI 1640.

rx - jrc nrd 545 - 16 x 45 feet EWE, 100m b.o.g

Im off to bed early hoping for good dawn conditions -

regards and 73'

Hi all,

superb conditions this morning - some of the best I have ever seen, most freqs were awash with signals things were still going at 10 am when I had to wrap things up.

WKAQ 580 and KSL on 1160 were real thrills.

Amongst a ton of other stuff heres what was of particular interest.

1000 WMVP Chicago, IL, ESPN sports. Good signals later. W/F 05:07 10/10/06
1210 VOAR St. John's NL, very nice id on hour. " VOAR The Christian Family Radio Network" G 06:00 10/10/06
900 CMKP R. Progresso, Cacocum, latin mx / /890, amid several stations. F 06:10 10/10/06
760 WJR Detroit, MI, talk, "Newstalk 760 - WJR" G 06:25 10/10/06
580 CFRA Ottawa ON, "Newstalk Radio 580 CFRA" rolling news over WKAQ. G 06:31 10/10/06
580 WKAQ San Juan, PR, "Escucha WKAQ 5-80" rolling news. CFRA dropped right out leaving this in the clear gorgeous copy. vG 06:33 10/10/06
840 CMHW Dobleve, Santa Clara, presumed, light latin mx, think I caught a "Dobleve" ID. Over WHAS G 06:38 10/10/06
1060 XEEP Mexico DF, latin pops // 6185, nice signals. G 06:49 10/10/06
640 CFMJ Toronto, ON, "640 Toronto", rolling news, briefly over CBN. F 07:02 10/10/06
640 CM-- R. Progresso, two sites listed, latin mx / /890, F 07:40 10/10/06
1120 KMOX St. louis, MO, talk show. F/G 07:50 10/10/06
1160 KSL Salt Lake City, UT, weather report from yl, "Utahs news traffic and weather station - KSL newsradio" First for me !. F 08:33 10/10/06

rx NRD 525 / 100 m b.o.g / mfj1026 used as preamp.

regards and good dx

935. Poor Conditions

Yahoo group: skywavesmw
Date: 2006-10-13 06:22:51 UTC
From: John Faulkner
Topic: 549 Message: 935

There were promosing signs at 23:00 with many east coast NA stations coming in really well.

I chose to record 1380 up to 04:00 and 1470 until TA fade-out which was around 07:30 for me.

1380 was better at midnight with nostalgia but conditions quickly deteriorated, coinciding with
rising K indices.

1470 was also wash-out with only WLAM and a very weak Latin struggling through.

I have not found this season particularly good so far. The good TA DX period around the middle /
end of July would have suggested better conditions lay ahead. The sunspot minimum has not taken off
yet for me. Plenty of time yet no doubt so fingers crossed.

I will be away from MW DXing over the next few days while I take part in a Suffolk FM DXpedition, so
don't log too much while I'm away. ;0)

Good DX!

John

1380 CB138 R Corporacion, Santiago. Full ID at 0001 Weak 0001 18/10 JF
1380 WMYF Portsmouth VA. ID at top of hour. "The Music of Your Life, AM 13-80 WMYF".
Poor but clear. Weak 0100 18/10 JF
1380 CKLC Kingston ON. "Listening to 13-80 CKLC can be healthy . " Weak 0200 18/10 JF
1380 YVNG Ondas Del Mar, Maracaibo. Clear ID and alone at this time Weak 0601 18/10 JF

Have been hearing a Brazilian on 1470 most nights for the last few weeks which always peaks at 23:00
yet never seems to produce an ID, just promos. Anybody else hearing this?

Recorded 1380 overnight.

00:00 R Corpracion
01:00 WMYF
02:00 CKLC
03:00 Potential "RCN" ID but too weak to be 100%.
04:00 Unclear - possibly WMYF on top, but v weak.
04:43 R Corporacion ID heard
05:00 Sounded like Ondas Del Mar (much weaker signals)
06:00 Ondas Del Mar 100%
07:00 Nothing definite
08:00 Nothing definite
08:00 onwards on 1130. Probably WBBR (very weak). Seemed to be solo whatever it was.

TA fadeout around 08:30 GMT.

Good DX!

Yahoo group: skywavesmw
Date: 2006-10-20 11:06:05 UTC
From: John Faulkner
Topic: 937 Message: 937

Conditions were very good at 22:00 with some very good signals from the regular east coasters,
particularly 1510 WWZN and 1520 WWKB.

I heard second North American stations behind 1500 WTWP, 1520 and 1540 (which turned out to be WNWR)
at 22:15.

I recorded 1500 overnight to try to catch the second station ...

00:00 Good levels from WTWP and a lively Latin music station.
01:00 Extreme shouting OM Latin. WTWP takes Larry King.
03:00 WTWP takes Jim Bohannon.
Latin station goes 100% back-to-back music after this.

At 07:04 I moved to 1130 where there were clearly two North Americans.

Finally from 07:30 I caught a North American playing pops. Firstly the Hollies "He Ain't Heavy"
then a more modern Nickelback rock song. Who could this be?

Unfortunately, after this point my wife came and took the laptop, thus ending the recording. They
don't call me the world's unluckiest DXer for nothing!

Bugger!

John

938. Latest TA fade-out of the season so far

Hi Chris
you should be able to release the broken pin /s ocket from the plastic
by depressing a clip through the gap and solder the wire back and
reinsert the pin.
Failing that get a replacement from Maplin or similar and recrimp the
wires to it.
regards
dave G8SZX

Hi Mark

Yes, I got your last email, thanks. Replied now.

Conditions took a tumble overnight. Started off pretty good but went downhill steadily due to
increasing K numbers. Very few TA signals on the band by local sunrise.

Firstly listening to 960 around midnight and an oldies station was struggling through. CHNS has now
gone from this frequency and leaves the channel open to a few possibilities. Oldies could be CKWS
in Kingston ON. I'm not sure if I've had this one before. 960 is a dificult channel here due to
adjacent channel splatter.

There was a nice early surprise at 0046 with KCJJ in Iowa City received here on 1630. At the same
time there was a sports station on 1650 mixing Disney's WHKT which I suspect must have been KCNZ
Cedar Falls, also in Iowa.

At local sunrise, a second North American was audible on 1130 which frequently came up to equal
levels. Splatter was apparent here too, presumably due to the disturbed conditions, but it didn't
stop me recording an ID from KWKH in Shrevport LA ...

skywaves.info/documents/MW/1130%20KWKH%20Shrevport%20LA%200634%2028-10-06%20(JF).mp3

Log to follow.

From: Mike B.
Topic: 946 Message: 947

Hi again,

Can anyone check the link below and determine if it sounds like the Sudan on 1296. The details are in the post. The time was about 0215 UTC. I've seen two reports of the Sudan being heard on the extreme East coast of the USA and I'm thinking this might be them also. The clip starts with music, then a possible ID with a man and woman (and birds chirping??), then a man speaking until 0030 when the station went back to Arabic (?) with prayer. I'd appreciate your ideas.

970 WFLA Tampa FL. Sports news and ID "9-70 WFLA" then football news. W 0703 31/10 JF

No live listening over the last two nights - I needed to sleep! But I am very pleased with the
above personal first. Just decided to leave the radio on 970 and see if anything other than WZAN
came up. Curiously, a third station with nostalgia music was also audible at times.

My splattery recording of WFLA is at ...

skywaves.info/documents/MW/%20%20970%20WFLA%20Tampa%20FL%200703%2031-10-06%20(JF).mp3

Hi Mike,

Interesting story, but... be aware, that there could be another
candidate for your 1296 catch !

A few years ago I regularly received asian & arabic signals
on 1296 when Orfordness BBC 1296/500kW was off-air.
Looking at the TX-list I presumed, that 1296 Reba with 1500(!)
kW from the Sudan was received. Other investigations of mine
gave doubts, whether this 1500kW TX was operational or not, also
not one MWDXer ever received this TX here in NW-Europe.
Not to say that this Sudanese MWTX is NOT operating, but as said
the situation in the Sudan, with its civil war, is uncertain.

My reception of the exotic programmes on 1296 could be related to
the Radio XL 1296 UK 6.4kW TX of Birmingham for the ethnic
minorities in this big English city.

After getting to know this, I payed more attention to the 1296kHz
frequency last years, but personally I never received a trace
of the sudanese Reba MWTX !!

On the other hand, a reception on 1296 from the Sudan in the USA
can be considered as an extreme good DX-catch.

951. Poor MW Conditions

Yahoo group: skywavesmw
Date: 2006-11-05 00:09:41 UTC
From: John Faulkner
Topic: 951 Message: 951

Conditions have taken a tumble on medium wave over the last few nights. The band has been lacking
TA signals around midnight GMT. Things don't improve much as the morning progresses as only a
handful of very weak TA signas get through, WMDD in Fajardo, Puerto Rico, being one of them.

November (and February, for that matter) are notoriously the weaker months for TA DX though I never
understand why. December and January though should see a return to good conditions, but hopefully
much sooner!

Good DX!

John

952. Dream & RecAll-Pro now cooperate

Yahoo group: skywavesmw

From: Jurgen Bartels
Topic: 952 Message: 952

It bothered me quite a while that I could not record from Dream with RecAll-Pro
Why should I loose all the nice things of RecAll-Pro ?

There must be a way around, and I now found it

Virtual Audio Cable is all you need. (shareware)
http://software.muzychenko.net/eng/vac.html

Steps to do:
1. Dream
set "Sound out" to "virtual cable"

2. RecAll-Pro
in Prefernces / Options / Driver set "Audio in device" to "virtual cable"
no need to set anything in "recording source" anymore

3. Since Dream now sends all audio to virtual cable the speakers are silent,
you need to redirect the stream back to the soundcard

start "Audio repeater" and set "Wave in" to "virtual cable"
and "Wave out" to your soundcard driver, then press "start"

Get 1st the demo version of virtual cable to check if it works for you.

Dream & RecAll-Pro

790 WAXY South Miami FL. "You're listening to Fox Sports Radio on WAXY South Miami, Sportstalk 7-90. The National Sports Report - right now!" Caution: Mentioning other station's calls on the network. F 0700 07/11 JF
1540 WDCD Albany NY. Mentioning 96.7 WPTR, then WDCD ID, mixing CHIN in oriental language G 2326 06/11 JF

Recorded 790 for mnost of the night. There was more than one sports station here, particularly
approaching sunrise. Is WSKO still carrying sports?

Then recorded 980 from sunrise. This is another well-splattered channel here so I was lucky to hear
what I did. There were two North Americans - one with sports, the other with oldies. i.e. Abba's
"Waterloo". Not sure who these could be.

A big improvement over recent nights!

Excellent Jurgen! Thanks for the tip.

How I have often wished the version I have been using can remember the last settings. It's a pain having to set them up each time the programme is run.

It will be interesting to see if there are any other useful features.

Cheers

Same feeling here, that's why I asked the programmer to implement this in March and he did, but then I did not find where the .EXE could be found. Yesterday I finally found it

1650 UNID Unidentified. Spanish religion. Woman ID in Spanish "la voz de su
Santidad" or "the voice of His Holiness". Mixing KCNZ and WHKT.
North America? A mystery! Weak 0248 08/11 JF

It's great to tempt fate - especially when it works in reverse. I was moaning about the poor
November conditions a few days ago but last night was a really good night for transatlantic DX.

1300 WOOD is a personal first and I can add Nebraska to my list of States received. 1620 KOZN has
been heard domestically in the UK a few times this season. It is the only station on 1620 which
carries ESPN sports. It would have been nice to get a local ID though. Incidentally, the X band
was in very good shape overnight!

Conditions are still very quiet as I type this but an increase in activity is forecast for tomorrow
and the next two or three days. Hopefully we will see another night of good DX before this happens.

Good DX!

1280 WNAM Neenah WI. You're listening to Americas greatest ?music?, on 12-80 WNAM"
Further ID at 01:50 "On 12-80 WNAM, no-one can love you more .
Tom Jones . " then ad break. Generally dominant by 02:00.
Weak 0047 09/11 JF
1320 CJMR Mississauga ON. Indian language programming. Overtaken by CKEC moments later.
Good 2303 08/11 JF
1470 CJVB Vancouver BC. Tentative. Chinese music and Chinese YL underneath WLAM and
an UNID English talk station. Weak 0600 09/10 JF
1480 WMDD Tropical, Fajardo PR. "a esta hora las deportivas catorce ochenta." Originally
thought to be WLMV but research from Henrik Klemetz found that this is a new
slogan for WMDD. Weak 0457 09/11 JF
1540 KXEL Waterloo IA. Many IDs "Newstalk 15-40 KXEL" and news about the Iowa
Hawkeyes and Iowa college football teams. Good 2318 08/11 JF
1640 WSKH Sussex WI. Usual Radio Disney programming. Weak 0027 09/11 JF

Conditions were quite interesting around midnight. Two stations of note were 1540 KXEL and 1320
CJMR, both at good levels. However, conditions deteriorated as the morning progressed.

I was taking particular interest in 1280 and 1420. 1280 had a nostalgia station which turned out to
be WNAM, first noted playing Bridge Over Troubled Water (not the S&G version) then with more
crooning. WFAU was also present but not too prominent.

On 1420 my hopes were for WOC Davenport IA where two talk stations were competing against each
other. No IDs were heard - and there was far too much splatter.
A brief appearance of "Back To The Bible" graced 1280 at 02:00.

Then recording 1470 from 0500. Chinese music was audible immediately before the top of the hour.
This was conveniently buried under WLAM and an English talk format station. WLAM was the only one
of the three to ID. More Chinese music and Chinese YL followed up to 07:15. Presumably CJVB.

961. New Yahoo Email Formatting - how to revert back to the original style

Yahoo group: skywavesmw
Date: 2006-11-11 12:18:57 UTC
From: John Faulkner
Topic: 961 Message: 961

Those who have group emails delievered to clients like Outlook, etc. may have noticed recent changes
in the formatting of group emails. An advert bar has been incorporated into the right hand side of
the message area. The main problem for me has been the resulting formatting mess because Yahoo have
changed the font to a horrible narrow one in order to incorporate the advert bar.

The good news is that you can revert back to the original style of email which removes the advert
bar. It's simple to do, just follow these steps.

Either:

Click on the link at the bottom of the message entitled "Change settings via the Web (Yahoo! ID
required)"

or:

Go to the Yahoo Groups home page "http://uk.groups.yahoo.com/group/skywaves/" or "http://uk.groups.yahoo.com/group/skywavesmw/" and log in.

Click on "edit membership" near the top of the page.

Go to "Step 3" near the bottom of the page and select the "Traditional" radio button.

Click "Save Changes".

Finished!

I would imagine all Yahoo Groups and memberships have changed this way by default.

1250 WEAE Pittsburgh PA. ESPN sports news W 00:03 17/11 JF
1370 WDEA Ellsworth ME. "WDEA" ID heard in splatter W 2352 16/11 JF

Poor conditions overnight and I only managed to drag the above out of the splash.

I recorded 1290 overnight as there was an English talker on 1290 at midnight but it didn't last long
and was overtaken by a Spanish station with sports commentary which dominated for the rest of the
night.

Midnight was the better period, sunrise being a wash-out. There was a slight improvement by 09:00
when some of the east coast powerhouses started to lift up. All this with quiet conditions! Roll
on December.

From: John Faulkner
Topic: 966 Message: 966

A run of very quiet geomagnetic conditions have prevailed for the last four days. There is a
possibility for some interesting catches if this continues overnight.

Looking at the pattern of DX reception over recent nights, the late evening/early morning period has
produced the strongest signals with the more regular east coasters making it through shortly after
18:00 GMT. The sunrise period has been less productive but if you can check tomorrow morning might
just produce something interesting.

Fingers crossed.

980 HJES Antena 2, Cali. "Antena Dos" ID pulled out of the splatter (by Henrik - thanks!)
W 0100 21/11 JF

--

Recorded 980 overnight. So much happening here for the last two nights! This channel is usually
too duifficult to access being so close to 981.

23:59 "Newstalk 9-80" ID. WCAP?
00:00 Fox sports. Audible most of the morning. Prob WTRY (WTEM is ESPN network)
00:07 CKRU "Hometown Radio 9-80 Cruise" ID.
00:22 Religion "Let them praise the Lord". See notes below.
01:00 Colombia. Antena Dos ID.
03:30 English Phone in.
07:00 Spanish again.

Thanks to Henrik for listening to my Antena 2 clip. I was convinced it was Mexico. Ahem! (rolls
eyes).

Having heard religion at 00:22 I wondered if it was KKMS in Richfield Minnesota (I have received
this station once before on a local beverage). Their website contains a full streaming archive of
programmes. I think I can rule them out for sure after listening to the stream. Different
presentation completely. According to Topaz the only other 24hr Christian religion on 980 would be
WYFN Nashville TN. They carry the Bible Broadcast Network but the relevant programme wasn't
available on an archived stream, so a channel to watch perhaps.

By the way - forgot to mention, the previous night around midnight (19th into 20th) I had fair
signals on 1340. This is usually splattered out by 1341 but managed to produce fair level English
talk between the lesser 1341 splashes. Anybody else ever hear anything here?

970. The ewe antenna on the tropical bands

Yahoo group: skywavesmw
Date: 2006-11-23 15:43:58 UTC
From: John Faulkner
Topic: 970 Message: 970

Not sure how many are aware of this but the ewe makes a superb antenna for the tropical bands.
Because it is directional you can position the ewe so it points to a particular direction.

Mine is beaming roughly 290 degrees so the wide front lobe is still OK for South America. I have
been listening between 4.800 and 5.000 MHz for the last few nights and it's amazing what pops up. I
have screened RG58 going to the ewe with a couple of homemade chokes inline to reduce noise. The
band is a joy to listen to and I have heard quite a few Spanish and Portuguese speaking stations
recently with good clarity.

Good DX!

John

Hi John

Superb, Ive got to get my ewe up this weekend, I must. Oh some advice if ok. Ive just picked up a laptop its quite old 4yrs or so it does not have a usb port. I want to run Dream and the rds software on it. How would I do this and how would I connect. Any advice would be much apreciated.

If your doing a bit of listening to theTropicals I can send some good lists. Ill do it from home tonight. In work now !

All the best

Mark

972. Dream Vs AR7030

Yahoo group: skywavesmw
Date: 2006-11-24 04:26:22 UTC
From: John Faulkner
Topic: 972 Message: 972

Over the last few nights I have been conducting some tests, comparing the audio and selectivity of
the AR7030 (directly out of the receiver, through headphones using the 2.1kHz SSB IF setting) and
that which has been processed by Dream (via the 7030 aux output, using the 9.5kHz IF setting, Dream
set to 2.6 kHz SSB).

Initially, when I did my comparisons I was convinced that Dream was far superior because of its
'brick-wall' selectivity, though I am aware there is a certain amount of digital processing noise
which appears as a soft 'mush'.

These first tests tests were made on short wave using stations separated by 5kHz. I posted two
recordings here to demostrate, where
http://www.skywaves.info/documents/6160%20via%207030.mp3 was
'before' and http://www.skywaves.info/documents/6160%20via%20Dream.mp3 was 'after'. As you can
hear, the difference was very impressive. I think I just assumed this would work equally well for
MW and I did very little (if any?) in the way of comparison tests here. The spacing between
stations is much more variable on medium wave where the DX can be just 1 kHz away from a strong
European station and I'm sure Dream will also have a degree of difficulty in separating two stations
this close together.

My tests on mediuim wave over the last few nights have proved that Dream may just have the upper
hand in selectivity, but perhaps 'only just'. When I listen 'barefoot' to the AR7030 I find more
benefits with the audio quailty which just has a clarity all of its own and without the digital
mush. Furthermore I can make better use of the passband tuning this way as opposed to via Dream.
What really made me aware of the differences was when listening directly this morning. 1410 is a
near impossible frequency here and I have difficulty hearing anything because of the 1413 splashes.
This morning I listened to 1410 directly and easily tuned away from 1413 with the passband shift and
had 75% copy from WPOP.

I'm unsure what to do! I think the sweetness of the direct audio wins it for me on MW. This, the
passband tuning and the 2.1 kHz IF filter are a great combination. This is not to reject Dream
completely because the examples above demonstrate its excellent abilities, but maybe not in all
situations.

I would be very interested to hear other's opinions and experiences.

Thanks

John

With QRM 1kHz away, you can eliminate the interfering carrier by using DREAM in SSB mode, but the interfering modulation 'splash' will remain because some of it falls within the wanted sideband of the Dx. I suspect that the developers could, if they wanted, demodulate both carriers and subtract the unwanted modulation from the wanted signal. That however would be outside the original scope of the DREAM receiver.
Maybe J?rgen would like to discuss this with them? Really, we would like a DXers Special Version with more of this sort of facility!
I wonder if John's 'digital mush' is related to soundcard quality. The soundcard must have some influence on receiver performance, especially intermodulation. There was a thread in German about this recently
http://de.groups.yahoo.com/group/drm-dx/message/1600
I wonder what were the conclusions from this discussion...?

I think that Mark may have difficulties using an older laptop for DREAM. It will not run on my older laptop - it's just not fast enough. Try it and see. The interfaces you need are a microphone socket or preferably line socket, and the headphone output. Remember, you do not input demodulated audio from the receiver hardware. But the old machine should be just fine for RDS decoding, once you set up a digital interface to the tuner.

Thanks for this Julian. I understand what you are saying about the European signal being 1kHz away,
etc. When I originally tested Dream on SW I think I just ran it on MW without any further tests,
completely overlooking this fact.

Regarding the sound card - The laptop will only have a standard motherboard card built-in card so
maybe there are some issues with this. My main PC uses an M Audio "Delta 66" which is a
professional studio grade card used for my work. It's a pity that I won't really be able to try
this for DXing with Dream since the PC makes too much noise and will keep everybody awake. I can
hide the laptop in a wardrobe so you can't hear the cooling fan. I think the mush is just digital
processing noise. Perhaps this is something else which could be looked at by the software people.

Recording direct from the AOR (without Dream) is a joy to listen to though.

Now to check my overnight recording on 980 kHz.

Cheers

John

980 HJES RCN Antena Dos, Cali IDs and chat, jingle ID, etc. Dominant throughout the middle part of the morning, taking over from CKRU's reign from 23:00. "RCN, la radio . de Colombia" W 0224 28/11 JF

Nothing much doing again. I slept right through, leaving RecAll-PRO on 980 which was relatively free from Eurosplatter for a change. CKRU dominated around 23:00 to 00:00 then Colombia took over until 03:00. Nothing much came through after this until after 08:40! What little bit of Euro interference was present from 981 suddenly faded right out at 08:44 then I had about 15 minutes of back to back oldies in the clear. Unlike CKRU there were NO IDs between the tracks, which included "Desperado", I think sung by the Eagles in this instance and "She's Not There" by The Zombies.
There was a convenient fadeout at 09:00.

It seems that they are busy with other things, i.e. DRM.
You probably wouldn't profit too much in adding a cleaned up sideband since
some artifacts will remain and interfere with the clean sideband

I now own Winradio G305e and its SSB does very well reduces the unwanted
sideband of an adjacent channel. It's built-in AD converter is definately
better than using a soundcard. I have to compare it one day with Dream. G305e
will probably overload once a beverage is connected. In that case I am
considering hooking up G305 to the IF output of R390A. The G305 spectrum
display is very helpful in choosing LSB or USB depending were the adjacent Euro
carriers are located.

Is this link incomplete ?

I don't know what 'digital mush' is and how it sounds

In general you should try to feed the IF with maximum levels so that the whole
level range is used to convert to digital, otherwise you will loose resolution
and the DSP calculation will suffer.

Jurgen

979. Re: Dream Vs AR7030

Yahoo group: skywavesmw
Date: 2006-11-30 10:46:37 UTC
From: Julian_H(Yahoo!)
Topic: 972 Message: 979

Jurgen - That's a good suggestion to use the full dynamic range of the soundcard.

The link to the soundcard thread is correct - sign in to
http://de.groups.yahoo.com/group/drm-dx/
and search for Beitrag #1600, 1601, 1604 subject "Betr. Soundkarten"

John's 'digital mush' is the combination of poor audio definition and general background noise and artefacts, and is quite noticeable by comparing John's two recordings.

It will be interesting to see your results with the G305 + R390A. Good Dx - Julian

Topic: 972 Message: 980

I don't know what 'digital mush' is and how it sounds

// If you have a listen to my recordings at the skywaves page "
skywaves.info/index.php?entityType=HTML&id=69 " and select:

Via Dream:
1280 WNAM
1450 Radio El Sol
1490 WBAE
1640 WTNI

Direct from AR7030:
1080 WTIC
1470 WKCK

In general you should try to feed the IF with maximum levels so that the whole
level range is used to convert to digital, otherwise you will loose resolution
and the DSP calculation will suffer.

// I have already condicted tests with the audio from the 7030 at different levels and was
surprised
at the difference this made. This has been set up as best as it can be.

I am very interested in these software receivers, or 'SDR's as they seem to be called.
Please DO
let us know how you get along with the G305/R390A experiments.

Thanks

John

970 CM-- R Reloj, site? Time signals, Id, "RR" in morse code on the minute. Mixing WZAN. UK First? W 0602 30/11 JF
970 WZAN Portland ME. Dominant on frequency as usual. Fox Sports Reports
F Pks 0530 30/11 JF

Conditions are getting worse! "Appalling" in fact. Nothing much coming in anywhere.

I recorded 970 overnight. One station of interest (perhaps) is the Cuban on 970. I cannot find
this in any lists. New transmitter? Anybody have any info?

I have re-introduced the ALA1530 and have been experimenting with phasing this and the ewe together.
It is possible to remove more European interference by bringing in the loop. Some stations can be
lifted out completely, like Italy on 900 (to leaev Spain). Other pests can be removed like local
Gem AM from Nottingham on 999kHz (to leave Spain) and several other high power Europeans can also be
reduced or removed (to leave Spain). Anybody have an antenna which removes Spain? This should be
of great help in some cases though.

Topic: 987 Message: 987

I haven't bothered to do much serious listening for the last couple of nights because of the conditions. However, listening
between midnight and 1am I was surprised to hear a few channels 'open'. 610 was probably the most interesting as there was
English talk there. At first I thought it might be WIOD, but given the cinditions and time of year I wondered about Trinidad. I
have not heard this for years. Neither has anybody else according to the lists. A channel to watch over the next few days.

There were a few other North Americans here and there but all very subdued and only the more common ones.

I didn't listen after this until almost 09:00 when I noticed hets were occupying many channels, maybe indicating a minor degree
of recovery. Wish I'd checked an hour or two earlier.

Conditions are still very poor in view of the recent solar disturbances but there were a few weak TA signals getting through.
Here's a breakdown:

23:00 - 23:30

800 V weak audio
820 TBN Nevis
970 Weak mod audio
1140 CBI
1140 Spanish talk noted between 23:20 & 01:00 then CBI took over
1280 V weak UNID, think Spanish
1510 WWZN
1520 WWKB
1540 UNID BBC news. Prob Bahamas

06:30+

620 V weak OM talking
650 Spanish
710 YL song
790 Weak audio
820 TBN almost fair levels now
870 V weak talk
890 Two stations, persumably Cuba dominating
920 V weak audio, sounded like CJCH
930 CJYQ almost fair
1130 V weak talk
1420 V weak English pop style tune
1520 V weak Spanish OM

Recorded either 650, 870 or 1140. Nothing ID'd for me. :0(

15th: 8 8 7 - - - - -

http://www.dxlc.com/solar/

Estimated A index so far today (00:00 - 03:00) according to DXLC is 236!!!

A further X class flare ws noted at 2209 last night with a sudden increase in >100MeV protons to greater than 1pfu. Another
earth-facing storm on the way?

Isn't this out of character with a solar minimum?

I'm still amazed that Lancaster university reports "no major activity detected" and indicates only minor activity at
http://www.dcs.lancs.ac.uk/iono/aurorawatch/

From: John Faulkner
Topic: 987 Message: 992

As members of the Skywaves FM/TV forum will know we are currently in the middle of a period of very severe geomagnetic storm
activity.

This will affect medium wave DXing for at least a few days.

For the latest information, visit:

http://www.dxlc.com/solar/

http://www.spaceweather.com/

http://www.sec.noaa.gov/

Medium wave reception conditions at DXLC say it all ...

"Long distance low and medium frequency (below 2 MHz) propagation along east-west paths over high and upper middle latitudes is
useless. Propagation on long distance northeast-southwest paths is very poor to useless."

I found a way to start Dream twice and each Dream demodulates a different signal. So you can listen to 2 stations 9kHz apart, see attached screenshot.

How?
Due to Windows (idiotic) limitation to allow only one connection to a Wave-In source, you need virtual audio cable (VAC). With it comes the utility Audio-Repeater, it feeds Wave-In (from the line input) to one end of VAC, the other end can be connect to multiple programs, in my case Dream.

Unfortunately the two Dream outputs cannot be assigned to L & R so you have to switch in between. But you could use another VAC's to route each audio to its own recorder.
Be aware that the CPU gets loaded quite a bit, on my 2Ghz about 45%

This also works with Winradio G305, but you cannot force Winradio's demodulator off the center, so only signals +10Khz or -10kHz can be used for Dream, for SSB is may just be suffcient.

Fantastic! I must look into this soon and get it all working in time for the return to good conditions (he says with fingers
crossed VERY tightly). It has to happen sooner or later.

I have also wondered about taking in two channels though not in this way. Such a pity you cannot separate into left and right
channels.

I think this will require a minor modification inside the 7030 as my maximum IF bandwidth is only 9.5kHz wide. Wouldn't it need
to be 15kHz or so? Julian - you have explained this in the past and I have forgotten how this works.

Thanks.

John

I guess Dream should be worked on: allow a 2nd instance to run with an output to R while the 1st instance outputs to L. That would also make obsolete the need of VAC. I think VAC is quite CPU consuming, that what I alos see with Winradios virtual soundcard.

I had the R390A BW set to 16 kHz, though the spectrum looks wider than that. The IF was around 12kHz

Topic: 997 Message: 997

The band 'seemed' to have recovered very well during the early part of the night as WTWP, WWZN, WKBW, WPTR and WQEW were all fair
to good levels!

The X band had presumed WDRW, definite WHKT and a nice clear ID from WPTX. Spanish music and talk was weak to
fair on 1700 too. I'm fairly sure I heard WSKH on 1640 around 01:30. WLAM was the strongest I'd heard it all season on 1470 by
01:00. 1570 had Spanish at 01:40. The odd thing is that nothing transatlantic was coming through below about 1400kHz.

Then it all went downhill very suddenly. Just about everything had gone at 02:00. I left the recorder on 1420. Looks like
conditions blew out at 01:00 and two K4s followed hence the sudden swell in conditions around this time and the dead band
thereafter.

I recorded 1420 overnight. Presumed CKDY around midnight. UNID nondescript soft music/female vocals and gently spoken OM
presenter here around 06:00 - too much splatter to hear properly. Two v weak stations here just before 08:00, possile IDs but
too weak again. "Good evening this is .... talk radio" at 07:51.

Merry Christmas to all.

Nothing to report partly due to antenna faults but also (when I managed to get the ewe working again) I heard next to nothing.
Possibly WLAC behind WWZN on 1510 around midnight. Spanish pops 1520.

Recorded 1470 until 07:50 but this channel was particularly quiet with WLAM dominating very weakly.

Recorded 1600 thereafter with Spanish rhythms dominating. Mentions of Puerto Rico but ID obscured by splatter at 08:00.

About time too!

The geomagnetic indices are quietening down again after destroying the DX over the Christmas period. The forecast is for "quiet"
conditions until January 1st, so providing there are no unexpected surprises we should see a return to better North American
conditions from today.

Overnight I was hearing a few North Americans around the midnight period. WWKB Buffalo NY was audible until past 10:00 on 1520
too.

Good DX!

Conditions were generally poor overnight. A few Latin stations appeared on the usual channels and only one or two North
Americans were audible too.

The phaser box worked well, enabling me to mix the ewe with the ALA1530. This allowed me to get in on 1310 which was a pleasant
surprise. Two stations were heard, the dominant one presumably being RNV (Venezuela) which I have yet to indentifiy.

Several other channels also produced audio as the European QRM was pegged back a dB or two.

Good DX!

Despite an early signal from 650 Greenland, the night was quite poor, the morning did not look promising either with a few weak signals, even X-band was gone. On other days it was usually filled despite being weak earlier in the night

1000 0815 had a news/talk using ABC material and announcing an .com adress probably WMVP Chicago. Did not sound like KOMO-1000 that I got last January

1410 0912 with C2C most probably CFUN Vancouver, weak
1130 0915 weak carrier tent CKWX Vancouver
1140 0940 CHRB High River, AB religious talk, fair, this is always the first one to appear from that area
I checked all 50kW from Alberta and found these carriers
770, 910, 1060, 1370 all from the Calgary area but to weak for any intelligible audio.

Interesting the condition of Greenland 650, if that was gone, so was Alberta. It serves as a good indicator for that path

All received on the 320° BOG

Just seeing Greenland 650 is starting to get back sitting on the grayline just like me, looks good for tonight ...

Jurgen

1005. Winradio G305 experiences

Yahoo group: skywavesmw
Date: 2006-12-30 22:18:56 UTC
From: Jurgen Bartels
Topic: 1005 Message: 1005

Now I have used Winradio G305G and R390A on Beverages and EWE for a few days. My first concern that it would overload turned out to be no real problem. Only when tuning to 189 ISL I noticed some images of tones from the maritime signals above 279 that are very strong here. Turning off the preamp helped a bit and sligthly reducing the input signal with the pot of my phaser did the rest. Also on 950 appeared a weak "carrier" that went away when the input was reduced. Another on at 960 stayed there even when the input was zero but went away when the input cable was disconnected. Those two irritated me first quite a bit

The audio quality is good, only when the input level is low it gets bad. But the BOGs deliver strong signals and it is no problem. The EWE is tougher, since it has a lower signal and TA signals in the late morning cannot be heard anymore while the BOG still delivered a good signal. In the beginning I use the R390A as a frontend and fed its IF output to Winradio, so lower signals were received a bit better. But later on I found out that with normal signals the audio sounded as well without the R390A frontend, and from that moment on I didn't use the R390A anymore, because tuning is so much better that I hardly want to miss that feature. Not wasting 250W electricty was another motivation to shut it off. The PC uses 100W and the monitor also 50..100W, those 500W could be felt as the room got quite warm.

Winradio does a good job on LW down to 9kHz, too. The R390A was limited to above 500kHz. Tuning on LW with BOGs is amazing, very strong signals and absolutely clear. The EWE drops off steeply below 500kHz and LW signals are very poor.

Winradio's tuning assists a lot during TA-DX. Searching for TA-Tx is done by stepping in 10kHz and look at the display of 0Hz spectrum line. Once you see a line then it's one Tx. No more listening to see if there's anything. With this method I discovered quickly a bunch of Alberta stations while their audio was not yet listenable. The drawback: the 0 and +/-5kHz grid lines are drawn in light-green, the spectrum inside the bandwith is yellow, so a Tx at 0Hz line is hardly distinguishable (yellow on ligh-green). I normally detune by 100Hz to get it off the 0Hz gridline. I have already asked Winradio to fix this problem, so far they have not even responded, in fact their response seems to be lousy, I ordered another software from them and got no bill. I asked them to sent a bill, and again, no response, very disapointing.

I really like the immediate spectrum display, much better then the slow one like in DREAM. I tested DREAM by feeding it the IF stream directly from Winradio via its "digital bridge" a virtual soundcard. The audio of Dream sounds a bit hollow, Winradios software produces a much cleaner sound. It seems that Dream does not filter out "aliases" well enough
The immediate spectrum display assists a lot during phasing by observing both, the unwanted and the wanted signal you can see if you're also reducing the wanted carrier an can thus optimize the setting. The display has a shorter

delay (latency) than the audio, so adjusting by watching the display is the better solution. The S-meter is awkward, it does not tell the strength of the signal within the bandwith but shows the value of the largest signal within the entire +/- 10Khz range, because it is measured in the hardware box. Tuning a loop antenna showed a lower going s-meter while the signal got stronger. Reason: the adjacent much stronger carriers got reduced. So always pay attention to the strongest carrier in the display. This also prevents measuring a lower carrier within the bandwith range. I hope the programmers will find a more useful solution. The s-meter is quite hectic, it should have a selectable lowpass filter that results in a more average and calm display.

The software still has some bugs. At certain conditions the stepsize is changed to a diffrent value and all buttons to set it to other values are disabled, I have to restart it.

In general I am quite happy with it for MW-DX and TV-carrier monitoring on Band-1. I like the open architecture that allows me to write other applications for it.

Glad to see you had *some* west coast reception Jurgen.

It seems there have been excellent MW conditions over the last few days up in the north of Scotland with many west coast and Alaskans coming through. There has been a dividing line though and virtually everywhere south of this has suffered very poor conditions.

I am catching up on my posts since Yahoo decided to bounce me again (twice in a month!) so many posts were not delivered to Pegasus and I had not realised.

I hope to have a few days in West Wales at some stage, running out beverages. I will wait until beter conditions though *if* they ever arive.

Current DXLC forecast from Jan Alvestad is ...

"The geomagnetic field is expected to be unsettled to minor storm on January 2-3 due to a high speed stream from CH254 and quiet to unsettled on January 4-5."

Good DX!

John

Thanks for the review Jurgen.

I have been considering getting something like this.

It would be good to put this receiveer at the side of the AR7030 and try some comparisons.

John

1012. BOG & EWE observations & tests

Yahoo group: skywavesmw
Date: 2007-01-02 20:53:50 UTC
From: Jurgen Bartels
Topic: 1012 Message: 1012

During the last days I compared the 3x3x8m EWE against my BOGs. The EWE is located 4m in parallel to the feedpoint of the BOG and looks the same direction as the 320° BOG in order to compare those two.

Comparing antennas is not easy as I found out. The BOG has some sidelobes with sharp nulls around 0° and +/- 80° (360° is the main direction), perhaps there are more. If an unwanted Tx sits in those nulls you think the BOG has a directivity in the main direction, but it's only the null which does the job. A slight offset to these nulls and I found Tx coming in better. Especially around 0° to +/-80° I use to target Europe-Tx from the back of the BOG at nights.
A good test TX target is UK/IRL, a number of low power Tx scatterd across the country covering an angle range of 70°. Some Tx come in clear with one BOG while the other BOG delivers a mush up.
During TA-DX however I noticed that there is no big difference of signal level. However almost always the 320° works better than the 280° even when receiving Tx from Nfld or Florida where the 280° should produce stronger signals. The northerly path seems to work better, I have no explanation for this. Perhaps it is that the northerly path travels more over water then the 280° that first crosses North German coast-land not far from me, crosses the Northsea and then hits the land mass of UK/IRL.
The 320° hits Iceland and Greenland as the first landmass
In order to prevent strolling animals ripping the wire apart I first put the wire on ground, a soaking wet marshland (good conductivity) When noticing the extreme low signal levels of western Canada Tx I lifted the wire on 1m fence poles, that increased levels quite a bit, especially on LW. Thus I now use BOG (Beverage off ground). Winradio now shows a bit of intermod, but I therefore get better signals in the late morning when all Tx starting to fade.

The EWE 3x3x8m shows levels that are similar to the BOG at 1660 kHz but increasing lower levels towards the lower frequencies. 610 kHz was already 10dB lower, 198 kHz was 20dB lower. Greenland on 650 was always a lot lower on the EWE, unaceptable for me. Today I changed it to a 30x4x4 EWE, I did not know if vertical height and horizontal length should be increased proportionally, so I choosed what the trees had to offer. Levels on the lower range have now increased the difference on 198 kHz is now only 10dB, Greenland 650 briefly popped up and the level looked the same as on the BOG. F/B ratio has detiorated, I have not aligned the resistor yet, will do so tomorrow.

I have not found any similar comparisons, please let me know if you know of any.

1690 WMLB Avondale Estates GA. "The Vouce Of The Arts" ID and classical music.
Thanks to Max van Arnhem for spotting this. Vw 0706 03/01 JF

A solitary logging!

South America was dominant overnight but only above 1400kHz. Two South Americans were present on 1450 at fair levels. Same for
1500. It was a poor night for IDs though and splatter levels were high.

Good DX!

From: Julian Hardstone
Topic: 1012 Message: 1014

Hooray! Some really good comparisons of eWe's of different dimensions, J?rgen. There is very little information on the web. I have wanted to do this for years, but I get distracted by other ambitions, like remote switching and termination. Also the local noise levels are too high here.

Could you just check your figures for the BOGs? Did you mean (320? is the main direction)? Are your quoted bearings against North, or against the direction of the BOG?

If you have the energy for any more tests, would you like to vary the height of one of the eWe's? All the signs are that increasing the length has made a big improvement in gain.

I have tried three eWe's over the years.
One was 3?8m, and showed the sort of performance described by J?rgen, including rather low gain. Maybe that is why people describe the eWe as being 'very low noise'.
One was the same but very close to the supporting trees at each end, and had very low gain and indifferent directivity.
One was 5?25m and had good gain, but rather weak nulls, which only varied slightly with terminating resistance. It was still possible to separate groundwave signals from front and back, but it did not show the very sharp nulls to rearward skywave signals that people get with smaller eWe's. It will be very interesting to hear J?rgen's observations when he varies the resistor on his big eWe.

750 CBGY Bonavista Bay NL. Political discussion // CBC NL internet stream mixing Brazil. F 0225 04/01 JF
800 PJB TWR Bonaire, Neth. Antilles. ON full ID on the half hour G 0230 04/01 JF

I'm not sure whether to include this logging of R Jovem Pan on 750kHz thus:

750 ZYH709 R Jovem Pan, Brasilia. Tentative. Sports commentary and discussion // their 620kHz internet stream. See notes below. G 0130 04/01 JF

According to a Brazilian AM pdf list I have, R Jovem Pan 750 almost always relay R Jovem Pan 620. I checked against their 620 internet stream (there wasn't one for 750 kHz) between 01:30 and 03:00+. Broadcasts were in parallel virtually all the time with the exception of local announcements on the 620 stream. Odd these did not appear on 750 though considering this is supposed to be a relay, unless the signal faded at the wrong moment. The only other option here would be R America from Belo Horizonte but would they have also been carrying the same sports programming?

Other than that it was a superb morning for Latin America. I started listening just after 01:00 and Spanish and Portuguese signals were audible on many channels - right across the whole band this time! If only I could have identified everything I heard, the log would be amazing. From memory:

580 Spanish
590 VOCM and UNID
650 Spanish and UNID
670 Spanish
680 Two Spanish (or maybe one was Brazil)
710 Spanish and perhaps Brazil
740 Brazil
750 Strongest Brazil to good levels!
760 Brazil
780 UNID
790 Possibly Miami and UNID
800 TWR
820 St Kitts
830 Latin
890 Suspect Cuba
920 CJCH and Brazil.
930 Brazil
980 Brazil
1010 UNID Spanish, probably WINS

1130 Latin, probably WBBR too
1180 Two UNIDs
1190 UNID
1280 Weak, perhaps Brazil
1310 Spanish
1320 Spanish
1330 Jumble of v weak signals
1340 UNID
1470 Weak Spanish
1500 WTWP
1510 WWZN
1520 WWKB & Spanish
1540 WDCD
1620 WDHP

The X band had mostly very weak, indistinguishable signals, otherwise the stations listed above were mostly at fair to good
levels unless otherwise stated. One of the best Latin nights I have known for years!

John

1430 WENE Endicott NY. " ... on your sports station, 14-30 The Team" "On Fox" Fox sports radio. Fair later.
W 0146 06/01 JF
1470 CX147 R Cristal del Uruguay, Las Piedras. OM ID, mentions of "futbol", usual happily sung jingle ID.
W 0053 06/01 JF

North America is showing signs of improvement once again, hopefully it will do so for a little longer this time.

My mysteries tonight were a North American on 1430 with a "Newstalk" ID with "W" call at 07:02 plus a fair level "LA rhythms"
station on 1410.

I am thinking of spending a few days DXing in the Lleyn this month, not sure what dates yet. Obviously this will need to tie in
with better conditions (if we get any) so I need to check the forecasts. Please mail me privately me if you are interested in
joining up for a trip.

Good DX!

John

It sounds like "Transmite Radio Progreso" at eight seconds but I don't understand the rest. Somebody else here may speak
Spanish.

CMHW "Dobleve" from Santa Clara is listed here. A relay of Cuban R Progreso?

John

1020. Logs N.Germany

Yahoo group: skywavesmw
Date: 2007-01-06 21:55:22 UTC
From: Jurgen Bartels
Topic: 1020 Message: 1020

It was a bit hectic, so finally now some results of the last days.

5. Jan 2007 ----------
820 0111 TBN via Radio Paradise St. Kitts 100kW
890 0639 R Progreso, Chambas, Cuba
920 0700 UNID carribean mx, 280°
1140 0810 CBI Sydney, NS
1180 0715 Rebelde with Echo, LA-mx
820 0722 TBN via Radio Paradise St. Kitts
780 0746 tent R. Coro Venezuela, carribean mx
710 1095 R. Rebelde // 5025 kHz
1180 Rebelde LA-mx til 09:30

Signals from Carribean dominated, and lasted very long into the morning 0930, the 5025 signal from Cuba faded at the same time as MW Tx from there went away. Since the disturbance the 280° BOG picks up signals better, so my first concerns are unfounded, it was simply that Florida on x-band arrived from a more northerly direction.
1660 WZNZ and 1680 WLAA from Florida appear every day, 1700 KVNS is rare, last year it came everyday.
1680 WLAA with its mex. music is alway great to listen to.
1180 Rebelde during the news has a large echo, it seems that they produced it this way, because the normal program does not seem to have an echo, I have to check it on 5025 one day. The Cuban Tx have a low modulation, I see a strong carrier but only hear weak audio, similar to Russian LW

6. Jan 2007 ----------
890 0034 R. PROGRESO Cuba SS weak modulation
1610 0119 Carribean Beacon
1650 0142 WHKT Portsmouth VA "Radio Disney"
1640 0254 WTNI Biloxi MS "Talk radio 1640 Gulfcoast News"
1560 0711 R. Disney
1200 0727 CFGO Ottawas "Ottawas Sportsgalary"
970 0734 WZAN Portland ME "9-70 WZAN"
850 0745 WEEI, Boston ID "Sports 8-50 WEEI"
880 0748 WCBS "WCBS Newstime .."
1030 0943 WBZ

The night started with Carribean, while the morning gave me the US east coast with stronger signals that lasted til 0945, x-band was full with stations also late into the morning, but the pirates ruined quite a bit.

760 WORA "Notiuno", Mayaguez. Tentative. Discussion with many mentions of Puerto Rico and local areas, seemingly // internet
stream. F pk 0145 06/01 JF
1050 WEPN New York NY. ESPN sportstalk F 2256 06/01 JF
1070 CBA Moncton NB. ID and CBC News F 2300 06/01 JF
1280 WCMN "Notiuno", Arecibo. // internet stream F 0140 06/01 JF

Another frustrating night. A fair amount heard but little ID'd, but that's 'the norm' I suppose.

North America seemed promising before 23:00 but had subsided by 02:00.

Probably WIAC on 740 too with tentative ID at 04:00 but v difficult in splatter

More than one Latin on 760 hence my difficulty in getting the // on WORA - I think the second station was R Puerto La Cruz.

Presumed R Continente on 1020.

Latin Americans on a couple of dozen or so channels again.

If only I could kill that splatter. I have been experimenting in Wavelab, trying to phase out the splatter in much the same way
you would co-phase two aerials together. This has produced varying degrees of success but nothing dramatic.

Good DX!

Much better conditions, good signals from night to late mornin 1015, mainly from the US east coast. First time I heard KVNS loud and clear this season. But then the pirates blocked the x-band again, thank god they have to work tomorrow and it will be silent.
When the european Tx went away this morning I tried to id weak signals in 14xx range, but they were simply too weak

1025. more on BOG & EWE

Yahoo group: skywavesmw
Date: 2007-01-07 22:00:36 UTC
From: Jurgen Bartels
Topic: 1025 Message: 1025

The last few days I used the new 4x30x4m EWE and constantly compared it to my 2 BOGs. First I adjusted the EWE resistor and it had to go from 560 to 1000 Ohms, the optimum is distinct, from the back arrives Hungary on 540, from the side arrives Belgium. Adjusting allowed me either to supress one of them quite well, but not both of them simultanously. 900 Milano and 918 Slovenia and 1134 Croatia can be well reduced, but at a different resistor value, so I choosed the 900-1100 range. It seems an EWE needs a remote control resistor to maximize it's F/B ratio. The EWE has a much better F/B than my BOG. Today I tried to adjust its resistor, but the improvement was just a little. It never gets close to the EWE. The BOG resistor had to go to 1000 Ohms also, perhaps due to the soaking wet ground.

Only today I found Winradios spectrum display and measured all antennas, you can still see that the EWE spectrum is tilted towards the lower frequencies. Unfortunately I should have used it on the 3x8x3m EWE before dismantling it. Load the screenshots into one directory and use XP's picture viewer to scroll back & forth to see the changes. Press F11 to avoid flickering.

http://xfer.3sdesign.de/Spectrum-BOG280-070107.png
http://xfer.3sdesign.de/Spectrum-BOG320-070107.png
http://xfer.3sdesign.de/Spectrum-30mEWE320-070107.png

The EWE works well up to 30Mhz while the BOG levels get lower and lower.

In the beginning the EWE performed pretty similar to the BOG (in the same direction). I got suspicious and temporarily disconnected the BOG from the transformer, because the closed by EWE might pick up a bit from the BOG, but that was not the case.
However the EWE has a wider front lobe, it picks up some UK Tx were the BOG reduced them and gave better audio on TA Tx. But on X-band without "local" unwanted signals the difference was marginal. Only in late morning when TA Tx fade, the BOG picks out a little longer. In a few cases the EWE perfomed better due to its better F/B ratio. So for a while I used mostly the EWE. However since 2 days it performs less well, the directivity has somehow deteriorated. . I have no idea why, I measured its impedance chart and that has not changed. The F/B ratio is OK too. But TA reception has clearer audio on the BOG. Perhaps it has something to do with the changed conditions? I don't know.
Before that I thought the 30m EWE is an excellent BOG replacement when there is not too much space.
Seeing that extending f a 3x8x3m to a 4x30x4m EWE improves levels on lower frequency I seriously doubt the quoted EWE theory of being two vertical radiators connected with a horizontal coupler. I think it must be a derivative of a Beverage, the horizontal wire is the radiator. But why feedpoint and resistor have to be switched compared to a BOG is still unclear.

My earlier email was a bit confusing about the angle values of the BOG.
The front lobe in an antenna chart I define as 0° (12 oClock) no matter where the antenna is actually pointing to. The backside is 180° (6 oClock)
I found that the BOG has a backlobe at 180° and a few sidelobes. In between there are nulls, and one of them is at about 100° on either side. There must be more nulls toward 0° as I can reduce some UK Tx very well while the other BOG picks them up and might even reduce another UK Tx at a different location in that country. The EWE does not show that property.

During the recent higher magnectic activity my 280° BOG pulled in better signals from Carribean area than the other. My previous concerns turned out to be premature. When signals from Florida arrive better on the 320° BOG then they just travel a more northerly path.

That's a fabulous example of this famous phenomenon. You don't say the date/time when you recorded this. Perhaps it is usually there, because 2.4MW is a very unusual combined power. I guess the effect was the same on any antenna..?

Hi John,

I was looking on the Longwave Club of America http://www.lwca.org/ message board earlier & there have been several good nights of reception of european LW broadcast stations in the USA & a fair bit of 160 metre DX too in the last few days.

Still no news on on 279
Khz.....

Nigel

Hi

Monday night I heard Radio RASD Tindouf (Polisario front) in Arabic to Saharaoui territory on 1550 khz.
No trace of it in the 40mb.

This morning 0730 UTC I was lucky enough to record two Transatlantic receptions on Medium Waves :

*KVNS Brownsville Texas "La Preciosa" well audible on 1700 khz in its new Mexican format.
They're 8,528 km from my location at Beauvais,France.

*KRJO Monroe, Louisiane on 1680, nice identification at the end of the commercials (it's a new station for me, my 15th catch in the Americas)

My most distant catch on MW remains CPN in Lima,Peru.
I use an Icom R75 coupled to a Wellbrook ALA1530 antenna indoors.

Cheers de Pat

7. to 8 Jan 2007 ----------
1200 2134 unid SS briefly
1660 2221 WGIT, Canovanas on 280° (320° 10dB weaker, EWE 5dB weaker)
1620 0110 Carribean Beacon religious wk
1370 0916 WDEA Ellsworth, ME
1140 0950 CHRB High River, AB religious
770 0959 CHQR

The night started earlier than usual at 2100 with VOCM on 590 At 2134 a SS station popped up briefly at 1200, that was an early alert from carribian, later on I found on 1660 WGIT with a very loud signal carrying great Salsa/Reggaton music. I just listened and enjoyed it until it ended, after that they had a different px.
The usual strong WCNZ Marco Island FL was very far in the background.
WGIT came in well on the 280° BOG, the 320° BOG delivered a very weak signal.
The morning favoured the East Coast, nothing really eciting. At 0950 CHRB near Calgary made it through.
Along with 770 tent CHRQ but very weak.

---- 8 to 9. Jan 2007

Nothing really exciting beside the usuals from the east coast
and the x-band usuals despite the low A-index
At 0047 on 1370 I heard an ID out of the mush sounding like WxCO or WxCL and then continued with oldies. I started the recorder, but too late, only the last letters got recorded. Nothing really fits, Hmh?

I wrote a snall plugin for Winradio, on frequency change it sends that value to RecAllPro's Annotation. So on playback I now can see what fx was set. Before that I had to enter the value manually which I often forgot.

On 890 and 1180 appear almost every night or morning silent carriers, seems that those are beacons.

Jurgen

1034. animation of entire MW band fade

Yahoo group: skywavesmw
Date: 2007-01-09 23:30:11 UTC
From: Jurgen Bartels
Topic: 1034 Message: 1034

Winradio provides a spectrum display. I use it to display the 10..2000kHz range for comparing antennas. Today for fun I made measurements with all antennas about every 40 minutes from 0745-2245 (local) and stored the screenshots into http://xfer.3sdesign.de/day-spectrum.zip

Unzip the screenshots into one directory and use XP's picture viewer (click in Explorer on the 1st file to start it) to scroll back & forth to see the spectrum changes moving. Press F11 to avoid flickering.

Now you see entire MW band fade towards midday and only the locals and the Tx around the Northsea stick out against the others. LW stays pretty stable

1038. EWE 30x2m

Yahoo group: skywavesmw
Date: 2007-01-11 12:35:39 UTC
From: Jurgen Bartels
Topic: 1038 Message: 1038

Yesterday I lowered the 30x4m EWE to 30x2m

Adjusting the R did not give a strong separation on 540 of Hungary and Belgium that I observed with 30x4m. Also 900 Milano and 918 Slovenia could not be reduced sharply by varying the R. However it was around 1600 local and the 30x4m adjustment was around 1500 then. Skywaves were thus a bit stronger. So I was a little disapointed.
The night however showed a strong F/B ratio compared to the 320° BOG. Most signals from the back could be reduced by 15dB. Remember it is compared against the BOG that already has its own F/B. I have no second EWE that I could compare against unfortunately. I only came up with that idea yesterday, so I don't exactly know what the values were with the 30x4m. But I think the lower EWE shows better F/B up to around 1400kHz, above that no improvements was observed
This morning I found the EWE reduces Hungary on 540 as much as the 280° EWE does. Hungary apparently sits in a null of the 280° BOG. The BOG has thus another null at 140° (seen in its antenna diagram). The same I found for 918 Slovenia.

The few weak TA signals of last night came in with identical strength BOG / EWE. In a few cases the EWE produced a slightly better audio because it supressed the Tx from the back better.
I guess the next step would be to lower it to 1m, but then it's like my BOG but only 30m long

The problems I suddenly had with the 30x4m EWE somehow disapeared in the last days, perhaps it may have been caused by a change of conditions, like entering at a different angle.

1040. Winradio vs. Dream

Yahoo group: skywavesmw
Date: 2007-01-12 00:25:58 UTC
From: Jurgen Bartels
Topic: 1040 Message: 1040

http://xfer.3sdesign.de/Winradio-Dream1.mp3

this clip contains audio samples from Winradio and Dream.
Dream gets its stream directly from Winradio, so there's no soundcard involved,
that allows to directly compare the signal processing capabilities of both

part-1 261 kHz Bulgaria, BW=3,8kHz no adjacent ch interference
part-2 1510 kHz WWZN BW=3,8kHz
part-3 1510 kHz WWZN BW=2,5kHz
part-4 234 kHz RTL BW=7kHz no adjacent ch interference

Every part sequence: Winradio / Dream / Winradio / Dream

The implementation of the filter in Dream is not good, you hear quite a bit of
ringing, this is quite bad at 2,5kHz BW, Alse the lower audio-spectrum is cut
off.

From: Jurgen Bartels
Topic: 1044 Message: 1044

Not much heard the last nights. Sleeping was better than listening

Last night was a bit better but signals faded very quickly and the splatter of Europeans were worse than mormal.
This morning was better many carriers but only few produce listenable audio

1470 0711 R Formula, Mexico City. "Formula de la Noche" much louder this time
1290 0757 CFRW Winnipeg MB, ID, oldies finally I got the ID, often saw its carrier

1190 got briefly to audio levels but only music (oldies?) and english announcements but no ID. I wished I knew who that is. I hoped for less splatter later in the morning but then 1190 got weaker, too

On 171 after 2200 UTC R.Rossii can still be heard after Bolshakovo closes.
It is not Tomsk, because that is much weaker, in fact I tried to ID Tomsk but this R.R blocks it. Any ideas what Tx it might be?

The 30x2m EWE looked promising with Europeans, but TA signals were always lower, so the reduction of rear signals did not help at all. The BOG was better. Only on x-band both were pretty much the same.
So today I raised it up to 4m again.

Jurgen

1045. Quiet Conditions Now

1046. Logs N. Germany 14.Jan

Yahoo group: skywavesmw
Date: 2007-01-14 12:45:56 UTC
From: Jurgen Bartels
Topic: 1046 Message: 1046

Nothing exciting this morning, a few weak signals.
I recorded 1470 obvernight and found a decent signal this morning, but that was a dutch pirate, Arghhh !!
He found a way to this spot.

1320 0118 CKEC wx
890 0125 Radio Progreso Cuba
1700 0731 KVNS very weak
1290 0858 CFRW Winnipeg MB, oldies, very weak

And I hoped for great signals when I read the forecast a few days ago.

The 30x4m EWE is much better than the 30x2m.
It produces generally the same levels as the BOG, the F/B is the same as the BOG, so the 30x2m was F/B wise 15dB better, but did not pick up TA-signals very well
The 30x4m EWE has a wider front lobe, and picks up Cuba while the 320° does not. But in other cases the smaller front lobe of BOG produced better audio.
So, the EWE cannot beat the BOG, but is a good compromise. A 8x3m EWE is definitely too small.
One could try to vary the length between 30..8m in order to find a more compact solution.

Jurgen

1400 Harbour Light Of The Windwards, Carriacou. Bible, God,
Jesus, Holy this, holy that, etc.
over lively Latin station. F 0129 14/01 JF
1420 YVNZ R Marabina, Maracaibo. ID and lively Latin music. F 0113
14/01 JF
1430 YVTP R Bahia, Puerto La Cruz. ID and very lively Latin music
programming. F 0110 14/01 JF
1470 HJTB *Ondas del Ibagu?, Ibagu?*. ID and short musical jingle
prior to the top of the hour.
Lucky to have just arrived on the channel to catch this
before it faded out. Thanks to
Henrik for spotting the ID. This seems to be quite rare in
the UK on 1470. W 0057 14/01 JF

A very interesting band overnight, at least the first part of it.

While midnight saw a completely dead band (apart from Europeans! ;0)
plenty of Latins started to appear just before 01:00 and some good
signals were in effect by 01:30.

I think 1400 was R Sabana from Venezuela. An 'obscured-by-splatter' ID
came at 02:00.

The Latin activity on 1470 continued beyond 08:00 with a surprise
appearance from Brazil. There were also a number of off-channel
stations present.

Good DX!

I will try this tonight. It will be interesting to see what effect this has on the cpu! I imagine the cooling fan will be running all night.

Does anybody know if there is any software which can be used with the AR7030 (not the AR7030+ so I only have 100 memories) All my memories are full and if I want to use Dream it is useful to reset all the memories, i.e. from 1470.00 USB 2.1kHz IF to 1470.70 USB 9.5kHz IF.

Sadly that's not the only problem for me. I need to widen the IF bandwidth beyond 9.5kHz, which I believe is possible but would require internal modification, otherwise I would not get the appropriate bandwidth to record two adjacent channels.

Thanks

John

1051. new method for eliminating splatter

Yahoo group: skywavesmw
Date: 2007-01-15 18:52:33 UTC
From: Jurgen Bartels
Topic: 1051 Message: 1051

Yesterday while watching the spectrum in Winradio I came up with a brilliant idea to easily kill splatter caused by adjacent channels.

Condition to be met:
- one sideband of the unwanted Tx must be clean.
- all three signals must be within the Rx bandwith so at least 20kHz is needed

Example 590 kHz
one carrier causing splatter is 594, the other 585
The clean LSB 585 is used to subtract its USB that overlaps the 590 spectrum
The clean USB 594 is used to subtract its LSB that overlaps the 590 spectrum

Now the 590 channel should be clean while only a single antenna is used. A second antenna is not needed at all.

This works only for AM Tx not DRM. And it is selfadjusting, no need to twiddle knobs, no need to phase. Isn't that simple?
Only cochannel interference can't be handle this new way.

Since only a DSP can do such a thing, it has to be implemented in Dream or in an add on for Winradio. It's about time to walk the Hi-Tec path in order to improve reception, the technolodgy is there, why not use it? I always was disapointed about phasing, just to difficult to operate and the result was pretty poor, especially as only one adajacent Tx could be suppressed but not both.

Jurgen

Hi Jurgen

You don't remember "quadrature AM decoding" then ... where you could use the two sidebands of the dominant station on the channel to eliminate themselves, and leave the next strongest co-channel station pretty much in the clear? That used analogue techniques, but surely could also work with digital.

I'll try and dig up some links later on if I can.

Mark

Date: 2007-01-16 13:36:03 UTC
From: John Faulkner
Topic: 1054 Message: 1054

1470 ZYJ616 R Rural de Parelhas, Parelhas. Several IDs by OM, IDs ranging from ?R Rural?, ?R Rural de Parelhas? and ?R Parelhas?. Local ads heard at 0118. Vw 0015 16/01 JF

1470 WWNN Pompano Beach FL. First noticed at 06:45 with talk show. Ads at 07:10 including ?bestvision,com? ophthalmology consultants in Margate FL. ID at 07:13 ?AM 14-70? and the Steve Kane Show as per schedule. Still present at 08:00. Vw 07:13 16/01 JF

Conditions getting worse. Ks of 5 and 6 during the last 24 hours have made the poor conditions even worse.

I recorded 1470.

23:00 > 01:15 - Brazilians. R Rural dominant but one other heard faintly in background at times.
02:00 > 04:00 - Little heard.
04:06 - Venezuelan national anthem heard in noise. Then two Spanish stations dominated. I think one was R Cristal del Uruguay.
06:45 - English talk show. Suspect WWNN.
07:03 & 07:07 - I heard what sounded like English Christian programming.
07:10 - English adverts then WWNN ID at 07:13.

1059. more on my ideas

Yahoo group: skywavesmw
Date: 2007-01-17 21:53:05 UTC
From: Jurgen Bartels
Topic: 1059 Message: 1059
Attachments: 1 described; binary payloads are missing from this source WARC

It seems that my explanation weren't clear to many, so let`s try it again, see attached spectrum.

We are tuned to 590, and you see the upper sideband (USB) of 585 reaches into the lower side band (LSB) of 590. The LSB of 585 looks clean and we use it to subtract from 585-LSB. That renders 590-LSB clear.

The same procedure for 594, its USB is clean and we use it to eliminate 594-LSB. That cleans up the 590-USB. The 590-LSB/USB is now clean and can be AM demodulated.

Only the BW range (marked gray) needs to be cleaned. That's important, because at other frequencies one of the adjacent channels is far away from the wanted, and does not cause problems, so only the other adajacent Tx has to be removed. If there is no clean sideband available because it is impaired by yet another TA-Tx , then the result will be less optimal, but then you might adjust the BW (gray area) to find a compromise.

This is all theory, it still has to be implemented. But I am sure that this will achiev quite a lot, especially in our area with lots of european stations.

It will be interesting to see the result when one of the adjacent Tx suffers cochannel interference. But I think it will still be effective, because we remove the sidebands that we actually hear and that causes the splatter that we want to get rid of.
Easy theory, but needs a lot of sweat to implement in software, impossible to do in hardware.

Topic: 1059 Message: 1061

Thanks for the explanation. I will forward this on to my friend at Lowe Electronics. We had a discussion about this on the phone yesterday and he is keen to learn more about this but doubts the practice will be as good as the theory. He explained the principles of quadrature modulation (QAM). I will be visiting him later tonight for a few beers and hope to get some more info on this. He is keen to follow our pursuits.

I need to obtain a cable to connect the AOR aux to the laptop USB socket for this but I wonder if some additional interface is necessary for the AOR as I doubt the pin outs will be right. A little bit of research needs doing for this.

Let's hope the end result is fruitful!

Keep us posted Jurgen.

Best wishes.

John

Hi Jurgen
I have had the SDR-14 for over 12 months now and find it a very useful
addition to the Winradio 313i and my Icom IC-R 8500 receivers
I feed the 45MHz from 313i or 10.7MHz from 8500 and use it as spectrum
monitor/analyzer or stand alone receiver for MF band monitoring.
I find the filters quite sharp.
It lacks memories etc, but I have the other receivers for that.
They have released the SDR-IQ board which is an unboxed PCB- well worth
a look.
As you say who has the time to scan through recordings?
I do and find it a useful tool as is the 313i record facilities.
HF aerial lost in the winds so some work to do when I feel up to it.
At least my indoor/outdoor actives still work for HF receiving
My VHF aerials suffered with the guys stretching and allowing the 2inch
aluminium pole to bend.
More work to do when ready
Thankfully I am retired and will have some time to do this when health
and weather improves.hihi
cheers
dave G8SZX

1066. Ashfield DX Log: 19-01-07

Yahoo group: skywavesmw
Date: 2007-01-19 13:00:16 UTC
From: John Faulkner
Topic: 1066 Message: 1066

930 CJYQ St Johns NL. Ad for ?Atlantic Woodworking?, more ads, ?Radio Newfoundland? ID. On top in a mix of stations.
F 0252 19/01 JF

930 CM-- R Reloj, multi-site. Time pips, etc. Vw 0658 19/01 JF

The band was in poor shape when I started listening at 02:30. 930 seemed to have two or three stations at this time but CJYQ soon pushed the others away. Cuba appeared briefly just before sunrise.

From: Jurgen Bartels
Topic: 1067 Message: 1067

Just found a good alternative to Dream,
Winrad http://digilander.libero.it/i2phd/winrad/
Sound quality is better, it has a few more options and the filter is quite sharp. The noise reduction functions look promissing, too.
However it lacks AM, only LSB/USB/CW are implemented

Jurgen

Hi Jurgen
Alberto may add other modes in the future but not DRM
I have used this program with my Winradio 313i and RFspace SDR-14
It is an excellent weak signal indicator and demodulator

Hello Jurgen.

Thank you for alerting us to the Winrad receiver. I can't wait to try this - hopefully later today. Presumably this works in exactly the same way as Dream with a wide SSB feed. I've glanced through the PDF document but cannot find anything about audio recording. Presumably this will be either in wav or mp3 format. Any ideas?

The filtering example on the Winrad website sounds amazing! It will be interesting to see how this works against traditional medium wave splatter - no doubt not as well as the morse recording would suggest.

I wonder if the CPU usage is lower too, thus causing less of a drain on the computer if running two instances, if this is possible.

and it's another free product!

More soon.

John

1070. Ashfield DX Log: 23-01-07

Yahoo group: skywavesmw
Date: 2007-01-23 13:24:41 UTC
From: John Faulkner
Topic: 1070 Message: 1070

1470 OAU4B CPN R, Lima. Id over the top of the hour. Unusual to hear this so early. Thanks to Henrik Klemetz for listening and confirming my clip. Vw 2359 22/01 JF

The last few days have seen a few North American stations on the band but there has been nothing of any great strength. One of the most regular stations has been 1480 WSAR. Conditions are still quite poor. I recorded 1420 this morning around sunrise but the recording stopped mysteriously shortly before 06:00. There was a light pops station (Boyzone, etc. and not C&W) mixing with an English talker. A couple of other North Americans: 790 WAXY and 1100 WTAM were also audible.

Following Jurgen's comments on Winrad and the Virtual Audio Cable I decided to give them a try. I am very impressed! Winrad is indeed a superb addition and renderd the IF audio beautifully, resulting in nice clean audio. I have already had a very positive comment from Henrik commenting on the nice audio quality. This was despite me making heavy use of the Winrad noise filtering to reduce some buzzing I had overnight and fairly narrow SSB (about 2.5kHz).

The VAC software was not necessary in order for me to record the IF while simultaneously demodulating it via Winrad and blocking out the IF stream, however, the VAC IS necessary for playback on my main PC as the IF playback stream can still be heard.

Many thanks to Jurgen for putting me in touch with this *excellent* software.

Good DX!

John

First noticed at 08:45, a second station on 1130. I was wondering if this is Vancouver since the resulting beat does not sound like the one I have had in the past when KFAN and KWKH have been audible.

Maybe someone else can get this better. The signals are just too weak for a decent copy here.

I am baffled. The option to moderate new members is switched on, yet these messages are still getting through to the MW group. The FM / TV group however is managing to moderate these messages. Both group settings are the same in this respect.

I will look into this more closely when I have more time. I can only think someone is posting a genuine message to begin with and then spamming once they have been unmoderated.

Comments welcome.

1470 WWNN Pompano Beach FL. ID heard in brief peak over WLAM.
W 0600 29/01 JF
1470 CX147 R Cristal del Uruguay, Las Piedras. Dominant on
channel with lively music. W 0611 28/01 JF
1470 CJVB Vancouver BC. Presumed. Noted their three time
pips at the top of the hour, clearly buried in the mix.
(OK, three pips is a lame excuse for an ID
but is as near as I've got to catching a definite west coast
DX ID from home) Vw 0700 28/01 JF

Finally caught up with some recordings from the previous few nights.
1470 is once again producing a plethora of stations at night.

I also noted the off-frequency signal this morning mentioned by Renato
Bruni (thought to be Turkmen) on 1470.55 shortly before 01:00. It
remained constant for at least half an hour and then began to drift
slowly down towards centre frequency and completed this by 02:00 when it
became buried in the rest of the carriers close to zero offset.

Good DX!

Ciao a tutti, per quanto riguarda le trasmissioni su 846 Khz per adesso si tratta solo di test (quello di ieri sera era a 50 kw), se le verifiche dei campi irradiati (elettrosmog..) attorno all'impianto daranno buoni risultati probabilmente l'impianto verra' riacceso.

Saluti, Andrea

1020 KDKA Pittsburgh PA. KDKA ID heard while flicking through the channels. W/f 0732 06/02 JF

Conditions still quite interesting. I monitored two channels overnight. Firstly 1270 where I heard sports talk around 01:00 and 07:00. From 07:30 I switched to 1130 to try and catch the North American mixing with WBBR. WBBR was peaking at good levels but dipped down after 08:30 when the second station became dominant. It was too weak to hear clearly however. The music format I heard would suggest KWKH.

Good DX!

Hmmmmph, I don't know what the **** is happening here. I rejected this message yesterday and banned them.

We get the same attacks to both the FM and this group yet they seem to get through here easily, yet not the FM group. Both groups are set up the same.

I am fed up with Yahoo and would recommend anybody to give them a wide berth.

1096. MW - Common North Americans

Yahoo group: skywavesmw
Date: 2007-02-12 12:20:40 UTC
From: John Faulkner
Topic: 1092 Message: 1096

Hello Mark,

Firstly, check the conditions.

http://sec.noaa.gov/alerts/k-index.html These and other useful links can be found in the Shortcuts menu on the Skywaves website.

You need quiet conditions for good North American reception. That is K indices of 0 and 1. The occasional 2 and even 3 may not disrupt things too much if they are short-lived. Ideally, three or four days of persistent quiet conditions *should* settle things down enough for good North American reception.

At this time of year, check between midnight to 0100. Commonly heard stations are:

590 VOCM St Johns, Newfoundland. (variety)
800 VOWR St Johns, Newfoundland. (folk)
920 CJCH Halifax, Nova Scotia. (oldies, occasionally sports)
1010 WINS New York City, New York. (news)
1010 CFRB Toronto, Ontario. (news)
1130 WBBR New York City, New York. (business news)
1180 WHAM Rochester, New York. (talk)
1280 WFAU Gardiner, Maine. (Fox sports)
1320 CKEC New Glasgow, Nova Scotia. (adult contemporary & country)
1430 WENE Endicott, New York. (Fox sports ID's as "The Team")
1470 WLAM Lewiston, Maine. (ESPN sports)
1500 WTWP Washington, DC. (Washington Post Radio)
1510 WWZN Boston, Massachusettes. (Sporting News Radio, ID's as "The Zone"
1520 WWKB Buffalo, New York. (Talk. ID's as Buffalo's Left Channel")
1540 WDCD Albany, New York. (Christian religion)
1560 WQEW New York City, New York. (Radio Disney)

I have left out the X band as this section can be so variable. Possibly one of the the most regular North Americans here is 1640 WTNI in Biloxi, Mississippi with talk and sports programming.

Hope this helps for starters.

Cheers

John

It seems the 'moderate new members' setting was switched off. It was *definitely* switched on last time I checked. I am wondering if there has been another Yahoo reset. This is not the first time such a thing has happened. I will keep an eye on this setting.

Hopefully we won't be getting anymore spam now.

Cheers all.

Hi John,

Is trying with a portable with its internal loop a lost cause ?

I've tried with my comms recevers & a long wire but neither set is great on MW.

From: John Faulkner
Topic: 1092 Message: 1100

You can hear some North Americans on portables when conditions are good but the chances are much smaller. The loop will definitely help.

The problem with portables will be the bandwidth, so you need to find a frequency which is not splattered by other UK or Europeans stations.

Start by looking on 1470 around midnight and after. Maybe 1510 and 1520 too, You will know when there is a transatlantic station present, even if you can't hear it, because you will hear a heterodyne whistle. This will manifest itself as a 1kHz tone if the TA station is 1kHz away from the Europeans, a 2kHz tone if 2kHz apart, etc.

1101. Ashfield DX Log: 10/11/12-02-07

Yahoo group: skywavesmw
Date: 2007-02-12 20:15:40 UTC
From: John Faulkner
Topic: 1101 Message: 1101

680 CFTR Toronto ON. ?6-80 Newstime 2:33? F 0733 11/02 JF
760 WJR Detroit MI. ID after talk show.?Newstalk 7-60 WJR? ID and ABC news. G 0100 11/02 JF
1060 WLNO New Orleans LA. Presumed. Intense black gospelling over WBIX. G 2338 11/02 JF
1060 WBIX Natick MA. Auto World programme with Bob Long as per website. F 2349 11/02 JF
1280 WFAU Gardiner ME. ?Settle your debts? ad then ID ?Fox Sports Game(?) 97 5, 12-80 & 14-50? G 2346 10/02 JF
1330 WFNN Erie PA. Presumed. Back-to-back oldies. Possible jingle ID. W 0619 12/02 JF
1330 WRCA Waltham MA. ID at toh. ?This is 13-30 WRCA Waltham? W 0700 12/02 JF
1410 WPOP Hartford CT. ?ESPN Radio 14-10? ID. Sports. F 0331 12/02 JF

I've heard quite a few interesting signals over the last three nights but I'm just not getting many IDs.

Summary:

Lots of oldies on 1330, mostly sixties stuff. Has to be WFNN but no IDs. This station is very clever - it has a knack of fading up only during mid-song, also quite weak and mostly in the noise. What sounded like lively Spanish sports commentary was noted in the mix on 1330 at 03:37 this morning.

840 at good levels, presume WHAS but no IDs. 760 WJR blasting in but I actually managed an ID on this! There's nothing else it could be really. 1420 has been splattered to hell so nothing much heard there. 1430 has been a jumble with nothing dominant. 970 oldies or sports, ditto 980.

1130 WBBR was heard with sports programming between 01:00 and 03:00 on the 11th. Thought I'd got WDFN with WJR being so good on 760. C&W oldies were heard behind WBBR for the duration, maybe KWKH?

Last night before midnight I had a good signal from a very excited ranting gospel preacher on 1060. God has clearly got to him. Has to be WLNO dominant over WBIX. Sudden disappearance around 23:40 suggests power-down.

920 has had C&W behind CJCH around sunrise. The echo on Broadcast News at the top of the hour suggests CKNX, unless CFRY also carry Broadcast News? C&W was also noted behind the BN echo at 07:00 on the 11th. I only heard 92 CJCH ID's (and lots of them).

640 probably Toronto with pops. At least two on 680, 920, 1150, 1160, 1320. Even 1300 and 1310 were alive with at least two stations each. C&W dominated on 1310. 1410 ESPN sports at good levels around sunrise. 1490 had a pile up and I recorded this for part of the night. Possible Vancouver on 1130 before 08:00 with rolling news format. I could go on. But ... the IDs? WHERE ARE THE IDs?

1520 at 22:30 last night had nostalgia mixing with WWKB's sports commentary.

At 08:00 there were two talkers on 1130. Possible "newstime" ID heard but lost in the noise. CKWX? Another case of so near and yet so far. :-(

In contrast to the rest of you, the X band has been almost dead here for the last few mornings though I may have heard Iowa on 1630 as pops noted a few times but painfully weak.

Good DX!

It could have very well have been KWKH. I've heard them this season
tearing up WBBR on my Toyota car radio around 0100 UTC. They have
forgotten to change their pattern a few times this season.

610 CHNC New Carlisle QC. ?CHNC et CHGM? ID with pop music // 1150.
F 2359 12/02 JF
970 WZAN Portland ME. WZAN ID in promo break. F 2353 12/02 JF
980 CKRU Peterborough ON. ?You?re listening to primetime sports on 9-80
Cruise and over the network? G 2349 12/02 JF
1150 CHGM Gaspe QC. ?CHNC et CHGM? ID with pop music // 610.
W 0000 13/02 JF
1150 CJRC Gatineau ON. French ID at top of hour, obscured slightly in
the splatter
but two clear mentions of Gatineau. Mixing CHGM. W 0000 13/02 JF
1250 WSSP Milwaukee WI. Buried under CJYE. ?Milwaukee? heard. WSSP call
revealed seconds later. W 0403 13/02 JF
1320 CJMR Mississauga ON. Arrabic programme? Phone number 416 509 7370
given out ? refers to arab2000.net. F 0024 13/02 JF
1330 WFNN Erie PA. Two announcements heard between oldies. First one at
0006
sounded like ?in the middle of a batch of oldies in a row ? True Oldies
Channel?, then
a further ?True Oldies Channel? ID at 0028. W 0006 13/02 JF
1420 WDJA Delray Beach FL. Brief ID heard in eurosplatter ?14-20 WDJA
Delray
Beach? by woman?s voice. W 0700 13/02 JF
1630 KCJJ Iowa City IA. ?16-30 KCJJ? ID heard between pops F 0720 13/02 JF

For the last few nights I have been hearing sports on 980. At last I
caught an ID this morning! Turns out it was CKRU with their usual "9-80
Cruise" ID. So WOFX remains on my wanted list. There seem to be an
increasing amount of stations carrying sports where it is not part of
their traditional format.

Yet more oldies on 1330 and finally their ID "True Oldies Channel" ...
www.skywaves.info/mw/1330-oldies.mp3 This confirms my tentative WFNN
jingle ID I heard recently. WFNN carry Scott Shannon
</wiki/Scott_Shannon>'s 'True Oldies Channel' oldies network.

Most of the morning was spent on 1250. CJYE was the dominant station as
usual. No IDs were forthcoming but non-stop slushy religious songs were
heard punctuated occasionally by a female presenter with a squeaky
voice. WSSP was a nice surprise though.

1420 was recorded around sunrise. I was looking for KTOE and / or WOC
but to no avail. The WDJA ID is thus:
www.skywaves.info/mw/1420-0600-13-02-07.mp3 but note the second call

which follows a few seconds later. It's too weak to bother with though.

WFNN and WDJA are personal firsts. :-)

Good DX!

1105. Winrad 1.24 released

Yahoo group: skywavesmw
Date: 2007-02-14 08:19:08 UTC
From: david towers
Topic: 1105 Message: 1105

Forwarded by Dave G8SZX for information
Works well with Winradio 313i and RFspace SDR-14 receivers here.

Version 1.24 of Winrad has been just released. It can be freely downloaded from
http://www.weaksignals.com and the mirror site http://www.winrad.org

From the change log :

Version 1.24 - Released on February 13th, 2007

* Released revised specifications on how to write a DLL to support external hardware, with new functions added.
* Modified again the support of the external I/O DLL to make it consistent with the published specs.
* Released one external I/O DLL to support the RFspace SDR-IQ (in addition to the SDR-14)
* Added the possibility to disable the auto-adjustment of the volume slider
* Streamlined the code with a substantial reduction of the Winrad CPU load

Feedbacks, comments and reports gladly accepted, thanks

73 Alberto I2PHD

Yesturday pm 16.30 on 5010 arabic / sitar music AIR Kerala pres, but never picked up in full daylight before, also, 5015 Turkmen R, with another station on top of it , or perhaps just off playing western 80ies music, a harmonic perhaps again at 16.30ish.

Any ideas, there were quite a few other stations about and as I say in complete daylight here, never happend previously. Or maybe Ive never really looked at that time of day.

1111. Ashfield DX Log: 16-02-07 + 970 Mystery]

Yahoo group: skywavesmw
Date: 2007-02-16 15:37:01 UTC
From: John Faulkner
Topic: 1111 Message: 1111

970 WFLA Tampa FL. ?WFLA? ID heard in the mix at 06:59 and again at 07:04. W 06:59 16/02 JF

I recorded 970 from 01:20. The channel was very lively with one Spanish and two English speakers. The Spanish did not last long.

Around 01:20 I heard a weather forecast for parts of Newfoundland! I double checked the frequency I had recorded and can confirm it was definitely 970.

I heard a weak ID at 02:00 but clearly it was not WFLA (which popped up later) or WZAN. The ID was "97" rather than "9-70". The call sounded like WCHU.

http://www.skywaves.info/mw/970-0200-16-02-07.mp3

00:00 - Woman talking, mentioning .com at 15 seconds.
00:28 - 97 WCHU ??? ID
00:32 - News Jingle (can't remember who has this one)

"CNN Radio News" was mentioned later.

Maybe the WCHU is actually WZAN, but the point is the "97" ID which I have never heard before on this frequency.

Reference to "The Word of God" shortly after 07:00 in religious talk or possibly a promo.

Cheers

John

1130 KWKH Shrevport LA. KWKH ID heard on WBBR fade. Country music. Some fair peaks! F 0515 23/02 JF

1200 CFGO Ottawa ON. ?The Team Twelve Hundred? IDs. Ottawa sports, mixing UNID EE talk station. G 03:00 22/02 JF

1360 WDRC Hartford CT. Sports commentary, then ?This is WDRC AM 13-60, the talk of Connecticut? at the top of the hour. F 01:00 23/02 JF

1360 WYOS Binghampton NY. Presumed with ESPN sports commentary mixing equal levels WDRC. F 00:57 23/02 JF

1460 CJOY Guelph ON. Tentative. Oldies format. Tentative ID heard in the splatter mixing with WDDY. W 0120 23/02 JF

Better this morning than recently. Some less than common stations coming through quite easily.

I have included a few 'presumed's as I think they are worthy of mention, if only to show how good the conditions were.

1130 Pile-up after 04:00. I thought I heard a WDFN ID at 06:00, mixing KWKH & WBBR! At least three carriers visible and all up to audio levels.
1250 Fox Sports, probably WSSP.
1300 Talk
1310 A jumble but quite weak
1360 Probably WYOS mixing WDRC with ESPN sports
1330 Latin mixing NA
1460 Probably CJOY mixing Disney with 60s oldies

The band was quite noisy this morning - particularly noticeable in the X band.

Good DX!

John

1114. MW Logs

Yahoo group: skywavesmw
Date: 2007-02-23 14:51:29 UTC
From: Chris Fahey
Topic: 433 Message: 1114

I've recently invested £6 in a World Radio and TV Handbook and decided to use the MW list in the back of the book to see what I could pick up

531 Utvarp Foeroya Akraberg
558 Radio Romania Aktualiati Tirgu Jiu
567 Radio Teilfis Eireann 1 Tullamore
585 RNE1 Madrid (Didn't think my little steepletone would pick up that far south)
630 NRK Europakanalen Vigra
639 RNE1 A Corunya
675 Arrow Rock Radio Lopik
684 RNE1 Sevilla
711 France Info Rennes
810 BBC Radio Scotland Westerglen/Burghead
855 RNE1 Murcia
864 La City Radio de Paris Paris
873 American Forces Network Power Network Weisskirchen
882 BBC Radio Wales Washford
945 France Bleu Toulouse
972 NDR Info Spezial Hamburg
990 Deutschlandradio Kultur Berlin-Britz
1008 Radio 10 Gold Flevoland
1017 SWR Cont. Ra. Wolfsheim

That's the end of my written log done between 2am GMT and 3am GMT. Earlier I stumbled across a station on 1472/3 Khz a Spanish sounding station with speech is there a chance this a South American or Mexican 50kw station coming through or is it a Spanish pirate station?

Hello Chris.

If this is a station from South America it will be on 1470, though some can be a few Hz off channel. I am not aware of any who are on 1472/3 but check the MW offsets list via the Skywaves site. Stations from the Americas use 10kHz spacing, by the way. Sadly, these days splatter from European signals is too much to bear and directional antennas are often necessary. 1470 is still the best channel for transatlantic DX in the UK. Or you could listen in the X band.

If you tune to 1467 USB during the early hours you should be able to hear a 3kHz tone if there is something coming through on 1470.

Good DX!

John

Hi John, I dialled back to 1470 at the time and heard it very weakly it wasn't til moved the dial to 1472/3 that it came through strong I even went back to 1467 but it has nothing but leakage from Radio Newcastle which is on 1458 it was at 0120 GMT when I heard it I don't know if that helps, for anyone else I live 3.5 miles from the North Sea in Murton Co. Durham. I'm just using a portable Steepletone Airband Radio.

KOMO 1000 and others received in Ashfield now - 07:30. GOOD signal from KOMO.

John

1120. Ashfield DX Log: 27-02-07

Yahoo group: skywavesmw
Date: 2007-02-27 18:28:30 UTC
From: John Faulkner
Topic: 1120 Message: 1120

Ashfield DX Log: 27-02-07:

680 CFTR Toronto ON. ?6-80 newstime 11-3-3?. G 0403 27/02 JF
860 CJBC Toronto ON. French CBC programme. F 0417 27/02 JF
840 WHAS Louisville KY. WHAS ID heard prior to the half hour. G 0429 27/02 JF
1650 CJRS Montreal QC. French OM with ID. ?CJRS? and ?Montreal clearly heard. Pop music.
New station testing. Over WHKT. F 0500 27/02 JF
1470 CJVB Vancouver BC. Chinese music and Chinese talk under WLAM at the top of the hour.
Familiar 3 time pips but at 13 seconds past the hour. Considering the conditions
elsewhere I woud assume this to definitely be CJVB. W 0600 27/02 JF
1000 KOMO Seattle WA. Frequent ?Komo One Thousand? IDs. Local news, traffic, weather.
Good peak! Local Gem AM reduced on phaser. ?Komo One Thousand newstime 10:05?. G 0605 27/02 JF

Summary:
1000 - KOMO, good peak 0605. Local Gem AM on good null.
1130 - News heard under WBBR 06:00+. Suspect CKWX.
1140 - Station at 1139.5, v weak 06:30+. CBI easily on top. Surely CHRB?
1410 - Talk station/phone in from just before 06:00, mixing equal levels WPOP. CFUN?
1470 - Chinese, three time pips, etc. 06:00. Drowned by WLAM. Has to be CJVB.
1510 - Talk station from around 07:00. "Talk Radio" ID equal levels WWZN. KGA?

TA conditions surged around 06:30. The X band was particularly good at this time, in fact some of the biggest signals I have ever heard on the ewe antenna here! 1640 WTNI was almost like a local. There were pile-ups on many TA frequencies.

Recordings:
1000 KOMO. Numerous IDs.
http://skywaves.info/documents/MW/1000%20KOMO%20Seattle%20WA%200604%2027-02-07%20JF.mp3

1410 UNID female "You're listening to ... " at 8 seconds.
http://www.skywaves.info/mw/1410-0657-27-02-07.mp3

1420 "14-20 ... " ID at 41 seconds. Large file to demonstrate how 'open' the channel was, just pushing the Eurosplatter aside.

http://www.skywaves.info/mw/1420-0651-27-02-07.mp3

1470 time pips & Chinese music at 06:00.
http://www.skywaves.info/mw/1470-0600-27-02-07.mp3

1510 had very low modulation. Even though its signal was sometimes stronger than WWZN it always sounded weaker. There were no clues.

Good DX!

John

1124. CJVB Reception

Yahoo group: skywavesmw
Date: 2007-02-28 11:55:44 UTC
From: John Faulkner
Topic: 1124 Message: 1124

Thanks to help from Paul Crankshaw and Nick Hall-Patch I can confirm my reception of CJVB!

Yesterday morning was a memorable day for me as it was the first time I have positively identified west coast of North America in thirty years of MW DXing! Naturally I am very pleased. I am also rather 'relieved' since I was convinced such DX was not possible, being so far inland and 'south of the border'.

My recording is at: http://www.skywaves.info/mw/1470-0600-27-02-07.mp3

Paul's web recording is at: http://www.skywaves.info/mw/CJVB-web.mp3

Then listen to this - I have placed the time pips and the first part of the speech, side by side, so you can compare the two. The time pips are easy but the speech is not so you might be better with headphones, but you should clearly hear the vocal content is the same. I have repeated the OM speech twice. http://www.skywaves.info/mw/CJVB-Comparison.mp3

KOMO 1000 was far simpler as the signal peaked up to S9 on the AOR (pre-amp on), and using my 'standard' ewe antenna! I had to use the ALA1530 and phaser box to cut down the splatter from local Gem AM from Nottingham on 999 though - their tx is probably about ten miles directly. Neither the ewe or ALA1530 could receive this alone.

Cheers

John

From: Jurgen Bartels
Topic: 1127 Message: 1127

Last night I was surprise to find some stronger signals, despite the strong disturbances.
1510 WWZN
1660 had a moderate signal so I recorded it overnight.

It tent was WGIT in SS with deep voice talk and some low pace music in between, a second weak signal was underneath it.
From 0300 onward I heard asian language, at 0400 I heard the ID WWRU.
A bit surprising, WWRU normally isn't heard here, perhaps they left their daytime power on?
Later at 0515 ID Relevant Radio was heard, from 0550 on it really got loud & clearand lasted til 0645 when the grey zone was west of Holland

Amazing what 1660 produced here on a 1x1m loop with WinRadio.
Probybl thnak to the disturbance

I am puzzled !

Just before going to bed I did a quick MW check and found on 1190 kHz a weak
Russian speaking Tx with a female anouncer playing Russian pop music.
The 1x1m frame antenna looked south-west. At 0000 UTC the Tx went off air

Where did it come from?
Perhaps it may have come from the direction of Finland, but on 1190 ?

Or is it from across the atlantic?

At the same time 1510 Boston and 1660 tent WGIT was heard.

1130. Grey zone enhancements

Yahoo group: skywavesmw
Date: 2007-03-01 06:17:29 UTC
From: Jurgen Bartels
Topic: 1130 Message: 1130

Last night I recorded 1470
During the whole night I only heard a faint signal, too weak to identify anything. But from 0610 - 0620 UTC it got strong and was easy to understand consisting of EE talk, no ID heard.

At that time the grey zone was moving over us. This was similar to yesterday on 1660 when around this times the signal became stronger but lasted longer.

I will try this again the next days, it seems there does exists a grey zone anomaly that Sylvain Naud mentioned.

1x1m loop near Wiesbaden

1132. mystery Russian Tx solved

Yahoo group: skywavesmw
Date: 2007-03-02 23:36:14 UTC
From: Jurgen Bartels
Topic: 1132 Message: 1132

The last nights 2330 - 0000 I observed two AM signals in the ranges of 1190-1199 and 1231-1238 in Russian

Now I found that those belong to 1215 Bolshakovo carrying VOR in Russian

those two AM-modulated spurs are symetrically around 1215 i.e. they have the same distance on either side and that difference varies over time and also in strength, sometimes they don't exist at all

Right now at 2330 UTC they are 1192 and 1237kHz

At 0000 that Tx will shut down again

980 CMDE R Reloj, Bayamo. Noticias and ID at the toh. Personal first. W
0800 04/03 JF
1470 WWNN Pompano Beach FL. ID ?AM 14-70 WNN? Phone-in discussing
Princess Diana?s death heard later.
Only vague traces of WLAM heard on overnight recording of 1470. W 0500
03/03 JF

I recorded 980 overnight. Interestingly, there was not a hint of Brazil
at 01:02 as was heard by Barry Davies in Carlisle at this time. Winrad
showed at least half a dozen carriers on 980 up to audio level at that
time so it could have been buried in the mix. Additionally, there was
audio coming from two wide offsets either side of 980. I did not measure
them but one was off by .1.

French (or Creole?) was also heard intermittently during the morning,
suggesting WHSR but no ID came through.

The antenna phaser made sure 980 was largely clear of QRM and I caught
this nice ID from CKRU at 06:13. ('scuse big URL)

1139. Re: My logging of 980 R Reloj, Cuba

Yahoo group: skywavesmw
Date: 2007-03-05 14:59:36 UTC
From: John Faulkner
Topic: 1139 Message: 1139

Please disregard my logging of CMDE R Reloj from Bayamo on March 4th. Henrik has kindly checked my recording and says it is RCN from Colombia. It looks like R Reloj was credited as a source for a news item. I also thought I had Argentina and Chile on 980 that morning due to announcements made by RCN.

Many thanks to Henrik for clearing this up. I have removed this from my logbook.

John

http://www.skywaves.info/mw/980_R_Reloj_0800_04-03-07.mp3

I have just realised that, despite the ID from R Reloj 980, I was not hearing the traditional time pips that one would expect from this time signal station. There was no "RR" in morse code either. Or is 980 CMDE not part of that group? Seems odd. I was wondering if I had received a different R Reloj.

Subject: Press release: Beaumanor Hall & "Codes!"

CODE & CYPHER SYSTEMS AT BEAUMANOR HALL - SITE OF SECRET WW2 LISTENING STATION

CONTACT (1):
John Alexander

Home: 0116 2291080
Mobile: 07968 373881
jalex_uk@...

CONTACT (2):
Ian Foulkes
Blandford Royal Signals Museum: 01258 482248

John Alexander (Bletchley Park ?Enigma & Friends?) and Ian Foulkes (Royal Signals Museum Blandford Forum) Announce ?Codes!? at Beaumanor Hall Woodhouse. A Five Day Exhibition of Radio Interception Equipment, Codes and Cypher Systems and Machines AT ...

Beaumanor Hall, Woodhouse, Leicestershire. 10:00 am - 4:00 pm, 26 March - Friday 30 March 2007.

John Alexander is a Leicester-based collector of code and cypher equipment. Ian Foulkes is an Assistant Curator of the Royal Signals Museum at Blandford Camp, Blandford Forum, Dorset.

For five days only, the exhibition is open to the general public and at no cost.

?Codes? ? is intended to bring the history of Beaumanor, the ?Y? service, the Royal Signals Reg. and the Codebreakers of Bletchley Park to a wider audience .. and with some rarely seen equipment on show.

With this compact exhibition space, the visitor can become acquainted with WWII radio receivers as used at Beaumanor, with some British code and cypher systems, the famous German Enigma machine and others- British, American, European, Scandinavian and Russian.

Were banks of Radio Receivers based at Beaumanor (and elsewhere) during WWII? Yes, and important they were too. Ian will bring some of these ?sets? along to see.

A tactical cypher machine used by the Americans during WWII and later? The M209 - one of John?s will be available.

What was the British ?Slidex?? Ian will describe the use of this British battlefield cypher system from WWII and later.

Is Mrs Alexander jealous of "NOREEN'? Not really, NOREEN is really a British cypher system originally used in some British embassies abroad.

A high level cypher machine used by the Russians during the Cold War? One such system is the M125 ?Fialka?, a ?super-Enigma?. Come and see it at Beaumanor.

MORE ...

This is a not-for-profit exhibition intended to take wartime radio intercept matters, code and cypher systems out to a wider audience and in the beautiful surroundings of Beaumanor Hall.

We do of course hope that visitors will want to learn more by visiting Beaumanor Hall, Bletchley Park and The Royal Signals Museum at Blandford Camp.

About: John Alexander: Former Police Officer, now involved in 'Technical Surveillance Counter Measures' (TSCM).

About: Ian Foulkes: Former Sergeant of The Royal Signals, a highly qualified Assistant at the Royal Signals Museum and collector of military uniforms.

About: ?Enigma & Friends?: A private collection based in Bletchley Park, a collaborative exhibit combining privately collected equipment with cypher systems once used within the British Foreign & Commonwealth Office and around the world.

http://www.bletchleypark.org

About: Blandford Museum: This is the national museum of Army communications and the exhibits and displays show the part that communications have played in the many wars and campaigns of the last 150 years.

1144. Geomagnetic Forecast: Extended period of quiet conditions approcahing?

Yahoo group: skywavesmw
Date: 2007-03-12 20:30:35 UTC
From: John Faulkner
Topic: 1144 Message: 1144

SEC Forecast ...

Field activity is expected to increase to unsettled to minor storm levels during 12 ? 13 March due to a recurrent coronal hole high-speed stream. *Quiet to unsettled conditions are expected during 14 ? 25 March*. Field activity is expected to increase to unsettled to minor storm levels during 26 - 27 March due to a recurrent coronal hole high-speed stream. Quiet to unsettled conditions are expected during 28 March ? 01 April. Activity is expected to increase to unsettled to minor storm levels on 02 April due to a recurrent coronal hole high-speed stream.

Looks like we could be in for some good conditions once the next storm has subsided. Conditions may return to good levels three or four days after the storm, depending on its strength, etc. Perhaps worth checking from the 16th/17th.

Fingers crossed.

John

1330 WRCA Waltham MA. ?A member of the Beasley Broadcast Group, this is
13-30 WRCA, Waltham-Boston. W 0500 13/02 JF

I looked in on 1160 following Paul's Puerto Rican logging yesterday. A fair level carrier was present and vague audio could be heard but it was short-lived.

I chose 1330 for my overnight recording instead as it seemed one of the few channels producing any audio at all around 00:15. French/Creole was heard so I assumed WRCA. An English ID was heard at 05:00. Their website is under construction so no programme details are currently available. A presumed RCN was also there on 1329.whatever it is causing a big het. Religious singing was heard after 06:00, possibly the New York station, then jazz was noted around 08:20.

Probably not bad going considering the bumpy conditions - there were a couple of planetary K5s overnight! Quite a late fade-out too.

Good DX!

Ashfield DX Log: 15-03-07

890 WAMG Dedham MA. Good peaks and rolling ESPN sports news. G 0702 15/03 JF
1090 WBAL Baltimore MD. A couple of WBAL IDs heard in the Talk Sport
splash.
G 0507 15/03 JF
1190 WLIB New York NY. Just caught a clear ID while dropping on the
channel. Too much
splatter to hear much else. W 0650 15/03 JF
1330 WWRV New York NY. Nice local ID ?WWRV 13-30 AM New York, WRVP 13-10 AM
Mount Kisco, 5-30 __?__ Caicos?. Then OM with Spanish ID. W 0502 15/03 JF
1420 WDJA Delray Beach FL. Thumping signal this morning! Good peaks.
Sporting News Radio
programming. Commercials leading up to the top of the hour, CNN Radio
news on the
hour and ID caught ?WDJA 14-20 AM? ID at 0605. G 0605 15/03 JF
1470.1 HJNT R Restauracion, Cali. (formerly ?Armony Records?) Double ID
by shouting children, then
religious programme. Mostly weak but fair peak at 0226. F 0102 15/03 JF

Quite an interesting morning. I recorded 1470 overnight but woke around
4am and couldn't get back to sleep so I have a tune ;0)

Recordings:
1330 WWRV gave a nice local ID on the hour just after 05:00:
http://skywaves.info/documents/MW/1330%20WWRV%20New%20York%20NY%200502%2015-03-07%20JF.mp3

1420 WDJA was coming in really well before 06:00 with good peaks.
Naturally it It faded a bit for the top of the hour ID, but here it is
anyway:
http://skywaves.info/documents/MW/1420%20WDJA%20Delray%20Beach%20FL%200605%2015-03-07%20JF
.mp3

Now get the headphones ...

1470 R Restauracion is a personal first and can be heard here:
http://skywaves.info/documents/MW/1470%20HJNT%20R%20Restauracion,%20Cali%200201%2015-03-07
%20JF.mp3

I spent some time on 1490 after 05:30 as there was a real jumble of
stations. Oldies were heard, including The Everley Brothers "Dream", but
a lively Latin music station dominated. Now, tell me I've got
imaginative hearing but I think I can hear a "Radio Popular" ID here:
http://www.skywaves.info/mw/1490-0630-15-03-07.mp3 WACM in
Massachusettes has this ID and a slogan of "Mi Favorita". The bit

preceding "Radio Popular" vaguely sounds like WACM but this is far from clear. I did, however, hear something like "mucho favorit" later though, if that is grammatically correct. Now that's 'clutching at straws' for you! ;0)

Good DX!

Programming for RVC 530khz Turks and Caicos comes from WWRV 1330 so you
caught part of the ID for RVC.

Now I am confused Mike,

So was the station I heard on 1330 HIVC from the Dominican Republic?

For the benefit of other members, it is very confusing with there being two R Visions Christiana on 1330. As I understand they both carry the same programming at times.

My 1330 ID included WWRV but not the Dominican Republic station. Can you confirm please?

Many thanks.

John

1020 CM-- R Reloj, 2 sites listed. Time pips on the minute, etc.
Mixing presumed KDKA W 0602 16/03 JF

Reception disappointing compared to yesterday. I had expected more given the quiet conditions though there were some decent signals from several east coasters.

I recorded 1490 for most of the night, switching to 1140 after 06:10. 1490 was busy throughout the night and I counted at least six carriers which were (only just) up to audio level. 1140 took my interest at 06:10 as I noticed a station well off channel. Hoping this was Alberta I stayed with it. Four stations were present, including CBI and a more dominant Spanish talker some way off frequency.

Thanks to Henrik for checking my recent recordings. He is of the opinion that one of my Spanish stations on 1490's yesterday (I'm certain there were two) is likely to be R Dinamica from Venezuela. Meanwhile my unidentified Spanish talker on 1140 this morning is likely to be WQBA judging by its references to Cuba. There was a second Spanish station audible close to CBI's offset and an unidentified talk station which was barely audible around 1139.7 - not sure if this is the Albertan as that used to be on 1139.6, unless it has drifted up a little.

Far too much speculation. ;0) Need some concrete IDs.

Good DX!

850 WEEI Boston MA. ?Sportsradio WEEI? ID after ads, mixing UNID US. F 0447 18/03 JF

850 WFTL West Palm Beach FL. Weather report ?sunny? then ID ?Newstalk 8-5-0 WFTL?. F 0606 18/03 JF

1470 ZYJ616 R AM de Parelhas, Parelhas. Ad for the Santana store in Caic?, near Parelhas. Thanks to Samuel C?ssio Martin from RealDX for listening to my clips. W 2340 16/03 JF

1470 HJHQ R Futurama, Pacho. ID between songs. Henrik saved the day again after IDing this from my audio clip. W 0108 18/03 JF

1470 was the first choice overnight, manually switching to 850 at 01:15 as I thought I heard gospel there.

Thanks to Henrik once again for listening to yet another of my recordings! This was a recording of an ID on 1470 which sounded like "Radio Sulama". This is another example of a wild offset making me aware that this was not a usual station on the frequency. I stuck with it and caught this ID between songs.
http://www.skywaves.info/mw/1470-0108-18-03-07.mp3

It makes perfect sense when you know what you're listening for! I would never have guessed this was R Futurama had Henrik not pointed this out. Many, many thanks Henrik! Another personal first and I believe the first domestic logging in the UK? Looking at the All Time Log I think this has only ever been reported on a Shetland Isles DXpedition in 1992.

Good DX!

1160. Ashfield DX Log: 21>23-03-07

Yahoo group: skywavesmw
Date: 2007-03-23 15:40:48 UTC
From: John Faulkner
Topic: 1160 Message: 1160

930 WBEN Buffalo NY. References to Buffalo and talk radio then WBEN ID. W 0025 22/03 JF

1020 KDKA Pittsburgh PA. Ad for a family reunion website. KDKA IDs noted afterwards. F 0050 21/03 JF

1050 CHUM Toronto ON. Zager & Evans 60s song then OM ID ?on Ten Fifty?, but no call letters heard. Dominating WEPN. F 0036 23/03 JF

1060 WBIX Natick MA. ?? political and business news ? this is New England?s (news?) on WBIX? F 0051 21/03 JF

1390 WEGP Presque Isle ME. Promo for event in Presque Isle, then WEGP ID. Long time no hear! F 0035 23/03 JF

1470 XEAI R Formula, Mexico City. ID at the top of the hour. W 0400 22/03 JF

1470 CJVB Vancouver BC. Time pips and ?Canada Itsum? penetrated the mix. (Vancouver is in the greyline at this time). Not present at 04:00 but Chinese music and speech heard after 04:20. W 0300 23/03 JF

--

It was nice to hear CJVB again, if I can use the word "hear". Those time pips really penetrate the noise well!

This is an accumulation of the last few day's loggings.

John

1161. Yahoo Downtime / Chat

Yahoo group: skywavesmw
Date: 2007-03-27 09:37:00 UTC
From: John Faulkner
Topic: 1161 Message: 1161

At last, Yahoo have sent an email to notify me of possible interruption to their service! More downtime may be expected while they carry out updates. So there appears to be good reason (?) for this downtime. The service has been fine here but maybe I was not online during recent outages.

We have been looking into the possibility of changing from Yahoo to another provider. Any such move will be done very carefully as has been mentioned recently. The Yahoo forums are very simple compared to others and lack some really useful features we could use elsewhere. Worth looking at later in the year. We'll see how things go for now.

Chat room Update:
The latest (third) one will be under test for the rest of this week and then a decision will be made whether to add it to the site. It looks promising and works very well with only one minor problem with PMs, which is not a great drawback. We are looking into a fix.

John

1162. Spanish local programs on MW

Yahoo group: skywavesmw
Date: 2007-03-28 00:11:55 UTC
From: Giampiero Bernardini
Topic: 1162 Message: 1162

If you are interested in DXing the Spanish radios here is a nice list of local broadcasting time for each "cadena" (network). Nice for recording local announcements. This list comes via PlayDX. I think that dXer Ignacio Sotomayor made a great job! Time is local one (now UTC +2h)
Some Spanish local tips can be found on my MW blog
http://radio-dx.blogspot.com/

Ciao
Giampiero

1250 WGAM Manchester NH. ?? on sportsradio WGAM? promo, mentioning the Red Sox. W 0126 30/03 JF

Conditions were not so good this morning as the 30th despite very low K indices.

Nice to catch the 1250 Manchester, New Hampshire station with their new sports format and call. They also appear to be on frequency now. Care is needed here as WEAE can also be heard here with ESPN sports. WSSP is also occasionally heard with sports but they are on the Fox network.

http://skywaves.info/documents/MW/1250%20WGAM%20Manchester%20NH%200126%2030-03-07%20JF.mp3

Cheers

John

1165. *** New Skywaves Chat now online ***

Yahoo group: skywavesmw
Date: 2007-03-31 14:34:31 UTC
From: John Faulkner
Topic: 1165 Message: 1165

After a couple of weeks of testing, the new Skywaves Chat room is online and accessible from the main page of the website.

Go straight to the login at : http://www.skywaves.info/?id=chat_room

Just to mention that we have overcome the AOL, server-linking, timeout and netsplit

Please note that this room uses a small amount of javascript (not Java) in order to offer some new facilities, such as chat history (so you can see what you've missed while you weren't logged in). So users connecting with Firefox, for instance, will be met with a message alerting possible slow running of their computer should they accept the javascript. This should not be a problem at all. By rejecting the script you should still connect to the room but without the chat history. This is merely a security message from Firefox. I think Navigator also use this, maybe Opera too. The room seems to work very well but if any members experience further problems please let me know directly.

We kept the chat room code as simple as possible but we felt that the javascript (not the same as Java, btw) offered many useful extras.

Thanks also go to Lynton who has done a large amount of the work to get this up and running.

Looking forward to seeing you in the room!

John

Hello Patrice,

This will be WMLB in Avondale Estates, Georgia.

http://www.1690wmlb.com/index.html

They are the only station on 1690 who have a classical music format and
announce as "The Voice of the Arts".

Nice catch!

1170. my new MW-DX site

Yahoo group: skywavesmw
Date: 2007-04-10 23:01:55 UTC
From: Jurgen Bartels
Topic: 1170 Message: 1170

I created http://dx.3sdesign.de/ that contains my MW-DX stuff incl. a lot of TA-DX audio logs of the last two years.

I documented my tests on an EWE and how it compares against a BOG. All where measured with a network analyzer, so the subject is emphasizing the technical side a bit.

Included are animations that show how the LW & LW spectrum changed during the course of a winter day

It was really time to go thru my old recordings of Jan 2006 and extract the interesting things. Only now I found that I got 0790 CFCW Camrose AB on 03-01-2006. At that time when West Canada came in I thought this country station would be CFDR -780 from NS (because it was so strong) and even wrote that in my log book. But when I now listened to the recording I found that the call letters did not fit the notes.
Also discovered 1040 WLVJ Boynton Beach very weak in between.
Jan 2006 was very productive.

Great that I kept the recordings, at the time of recording I was too tired to listen to them again. I needed a couple of hours rest before the next session started in the evening.

Hi Dave,
for first tests I use antenna mini-whip with 1m long rod and Degen
DE1103 for band 40-150kHz.
For other tests I use also modificated miniwhip, but direct to
audiocard (48kHz) and software Spectrum lab or Spectran.
You can see it in "Files" "1.zip" where is also schedule of VLV
stations compiled by other schedules (I dont know, if it has good
data).
You can see many signals, but I cannot identificate many signals too.
You can see for instance signal at 10kHz but Omega system is OFF?
Can you help me with identification my "unids"?

Regards, Jara Rat

From: Julian Hardstone
Topic: 1172 Message: 1178

Excellent set of screen grabs Jara. I believe GBR has closed
http://www.alan.melia.btinternet.co.uk/aecurxfm.htm
When it was transmitting, it was so strong you would hear 16kHz on audio systems or see it on oscilloscopes anywhere in the UK.

There is always a problem with VLF information on the web. So much information is years out of date, not maintained. For example
http://members.aol.com/RKDX/longwave-home.html

Even the IK1QFK page is looking a little old http://www.vlf.it/

I use a Kenwood TS-440S or a Siemens SLM and a random wire. Soundcard receivers are now the best for VLF, and need a tuned wire or loop.
My daytime log is 19.5, 23.2, 37.4, 52.0, 60.0, 62.55, 65.8, 77.5, 81.0, 82.75.
Strongest signal here (Manchester) is 81.0, I guess this comes from Skelton
http://tx.mb21.co.uk/features/skelton/skelton2.shtml
Can anyone confirm?

1180. EWE dual-feed

Yahoo group: skywavesmw
Date: 2007-05-01 22:07:02 UTC
From: Jurgen Bartels
Topic: 1180 Message: 1180

I am at the Northsea coast again and put up an EWE with dual feed, allowing me to use it in both directions. Each side it fitted with a relay to connect either the transformer or the remote controlled resistor. Thus I can use it normally with the adjustable resistor or simultanously hook up both ends to two feedlines that run to my phaser unit. That allows to phase it against itself. That works very well, and gives often better F/B ratio than using the resistor scheme alone. Only signals arriving perpendicular to its axis cannot be nulled well.
I use RG174 as the antenna wire, that also acts as a feeder line of the far end, so no more need to run a cable to that end of the EWE. Both feedlines start at the end that is nearest to your house.

The same dual-feed scheme I will try with a BOG, only 100m long. 300m long will probably not work, because attenuation of 300m RG174 is about 30dB and much of the far end signal will be lost.

Hi,

I can heard (see) 19.5, 23.2, 52.0, 60.0, 77.5, 81.0,
> 82.75. I use (up 50kHz) Degen De1103, mini-whip antenna with 1m long
rod and home made active preselector 50khz-30Mhz and (below 25kHz)
only miniwhip with audiocard and Spectrum lab software.

But big problem is schedule of stations below 150kHz : my schedule is
compiled by other from years 1999-2005 and I dont know, which data are
OK or which stations are OFF.

I connect many Hams, but here is also problem: Hams from USA cannot
heard the same stations as me, and I cannot heard stations from USA
(with antenna and audiocard only). VLF group at Yahoo is intersted
especially in natural radio, not in stations.
Hams in Europe are interested only in band 136kHz or other band (below
100Hz as Renato Romero).
And Czechoslovak DX club have not members interested in VLF...

I dont know about anybody, who can revise my frequency schedule (I can send it also in excell) or who use Spectrum lab for receiving too.

I think that it is very interesting band (9kHz-25kHz), but we have not informations about it!

And one very interesting experiment with Degen DE1103: you can modificate Degen also for band 0-100kHz. But IN THIS BAND is feritte antenna OFF: you can use external antennas, preselectors etc, but YOU CAN USE also ONLY Degen ´s TELESCOPE ANTENNA! Now you must use for tuning only knob, not keyboard! But signals also in LW band (for instance NDB ´s) are better, than with feritte antenna!!!
I can heard also 60kHz and 77.5kHz time stations or 147,5kHz RTTY meteo from Germany!

Reason: Degen use FET preamplifier and preamplifier with telescope work as "mini-whip" in band 0-1700kHz (if feritte antenna is off)!!!

Best regards, Jara Rat

1184. Re: [skywavesmw] Re: VLF band

Yahoo group: skywavesmw
Date: 2007-05-02 11:54:20 UTC
From: Jurgen Bartels
Topic: 1172 Message: 1184

This I get now in North-Germany with an EWE 34x3m around noon
No trace of 19.5 Are you sure that it is a real Tx and not local noise?

23.4 -50 dBm
37.25 -70
52.0 -90
60.0 -80
62.55 -80
65.8 -90
77.5 -75
81.0 -76
82.75 -76
129.0 -66
131.8 -55
133.2 -50
135.4 -45
138.9 -58
144.6 -70
147.3 -54

Interesting to see that adjusting R on the EWE still attenuates signals in this VLF range quite well. I can choose to improve/suppress 77,5 or 81 / 60 / 62.55

---
just discovering on 198 that I can easily separate BBC and Polskie Radio by phasing both ends of the EWE. That does not work when only using the adjustable R. And the phaser isn't really designed to work on LW, the needed phase shift is just small. In the far background I also hear Russia

On 207 I can suppress DLF (from south) so that weak Ukraine (from south-east) becomes audible

Jurgen

From: Julian Hardstone
Topic: 1172 Message: 1185

Jurgen - I can confirm 19.50 but possibly it is not continuous.
I suspect this is one of the VERDIN stations for
US/UK submarines. There are VERDIN stations in the UK (Anthorn), USA (Culter
and others) Norway, Germany, Italy, Iceland, Puerto Rico
http://www.comeclean.org.uk/content/future_of_the_british_bomb.pdf
This document does not give frequencies, but my guess is that these are
around 19-23kHz and possibly are intermittent. Perhaps you would like to do a
slow waterfall plot of this band?

Excellent results with your dual-feed eWe, and amazing that it works
on LW. How is it on MW? How long is it? I hope you will explain the feed
arrangements, later when you get home.

1186. Re: VLF band

From: Julian Hardstone
Topic: 1172 Message: 1186

Jara - It would be an interesting project to make a 2007 list of LF/VLF transmissions below 150kHz. Perhaps if everyone would send you their LF log, then we could try to identify many of the signals. Some of the frequencies can be found on the old lists, but many have changed.

You have noticed that the DE1103 is less sensitive on LW (also MW) using the ferrite rod antenna. This is because the ferrite rod is untuned in the DE1103, the only receiver I know which does not use a tuned ferrite rod. This is the only way they could make it tune from 100-1700kHz without band switches. Very clever!

1187. Re: VLF band

Yahoo group: skywavesmw

From: Julian Hardstone
Topic: 1172 Message: 1187

Jara - Your 'Strange VLF signals' are very interesting. Looking at 11.png, we can clearly see the binary FSK signal at 22.0/22.1kHz, and some bands of noise.
FSK is a very old modulation system, but maybe the VERDIN system uses a modern phase+amplitude system to transmit data. These modern systems make signals which look like noise, but carefully filtered noise - and that is exactly what you have seen! for example at 19.6, 20.25, 21.75, 22.4kHz. We cannot easily hear these signals with a receiver, because they are just 'noise', but you can see them clearly with Spectrum lab.
8.png looks much more like local noise from switch-mode power supplies. Try to see the noise from a SMPS or an economy lightbulb, but you will need a different receiver as these are usually around 120-180kHz.

If you can tell the difference between a local noise signal, and these data signals, you can start to make a very useful list of VLF transmissions.

I think that it is not bulb (/ I have not disturbance at 100-150kHz)
and I can see it not only in the night. But I can try receive all
signals also from other QTH in summer.

Jara - The important goal is to distinguish local noises from data tx. Not only lightbulbs, but also PCs, TV digital boxes, chargers for mobiles, all modern PSUs can make terrible LF noises. There has been much talk about this from amateurs using 136kHz

Some of your data freq's are listed here
http://www.vlf.it/trond2/list.html

I'm sure many 'comms' Rx allow use of a whip aerial, for ex Lowe HF-225+150, but the DE1103 is unique among domestic radios.

Northsound-2 is like a local to me across the north-sea

Pat, it would be helpful if you would tell where you are located

It is funny to get these "Magic" on consequitive channels
Magic 1152 MW, Greenside (Is this the one near Newcastle?)
Magic 1161 AM, Goxhil
Magic 1170 AM, Stockton (which Stockton is this? perhaps East Anglia)

EMWG is a bit unclear about counties for multiple used UK ctiy names

Jurgen Bartels, Suellwarden
10km east of Wilhelmshaven, Northern Germany, 3km off Northsea coast
100m BOG pointing 260 degrees
dual feed 34x3m EWE - pointing 270 degrees
WinRadio G305

1200. Poor Conditions

Yahoo group: skywavesmw
Date: 2007-05-08 11:19:00 UTC
From: John Faulkner
Topic: 549 Message: 1200

Just a quick update from the middle of England!

Although I usually take a break from MW Dxing in the summer months (in favour of FM and band 1 TV DX) I decided I was going to try my hand at South American DXing this year, re-positioning my ewe antenna to a SW direction. Having done this I find I am receiving variable amounts of electical noise: TVI; etc. which is anything from S1 to S7. Ferrite chokes are no longer capable of removing the noise so I am about to return the ewe back to its original position, further away from the house.

Most nights I have found the interference around S1 to S2 which is not a huge problem, but even then I have hardly heard any transatlantic DX over the last few weeks. The best catches have been 1510 WWZN and 1520 WWKB.

I don't know if the ewe re-positioning has been the problem but I feel conditions are almost useless.

Here's hoping for some improvement.

Good DX!

John

1201. Re: [skywavesmw] Poor Conditions

Yahoo group: skywavesmw
Date: 2007-05-09 21:01:04 UTC
From: Jurgen Bartels
Topic: 549 Message: 1201

The last 9 days in N.Germany did not give great TA reception either.
Most signals around sunrise were 1510 WWZB, 1650 WHKT and a few other weak ones in the X-band. Below 1000 kHz were nothing
Even during the disturbance I got the above, while I hoped for LA signals.
All antennas pointed to South America but brought in North America. So I then moved the 260° EWE back to 320°
On 8.May 1470 brought a SS but I still have to check what it was.
Last year at this time I got Vibracion with a ATS909 on a 1x1m frame, so I thought why not bring better equipment with me this time. Too late!

The other reason to bring it along was to test out a few of my new ideas in preparation for the next winter.

a. remote controlled switch on EWE / BOG to turn on/off the resistor in order to make it work bidirectional. Without the need of a second wire

b. remote controlled resistor for EWE using a newly discovered device

c. connect each side of a EWE to a separate feed line to allow for using two directivities of the same wire simulanously. Then optimize it by using the far feedline itself as the EWE element. So now I need only two feedlines from shack to the near side of the EWE.
Also each side can be remotely switched to use the resistor or the feed to allow for conventional operation.

d. the same was done with a 100m BOG

Result:
Everything worked expected, even on the BOG. In fact using both signals of the same antenna for phasing is amazing. The phaser is a lot easier to adjust and often needs no phase shift. Just add or subtract both signals, adjust the magnitude and the unwanted it gone, that works down to LW. I could cancel out BBC-198 amd hear Poland, cancel DLF-153 and hear Yunost, cancel Kaliningrad-1215 and hear Virgin.
For lack of MW TA signals I went to the tropical band. Switching to one side of the BOG you hear on 49xx kHz China, while the other end of the same antenna gave Brasil.

This arrangment allows to reduce your antenna farm by 50%

Instead of a wire you use RG174 cable, a bit more expensive, but hey, nothing comes for free. However 100m RG174 reduces the far-end signal by 10dB, but surprisingly I did not experienced it as too bad. So I guess I should try it also with 300m length next time. Unfortunately I don't have a 300m RG174 in one piece.

---
on 4.May I heard on 4975,96 Reggae with annoucements in EE and UNID language, perhaps from the Carribean. It went off air at 22:00 UTC. I didn't hear any ID. I forgot to check it again the following nights. Can anyone check it out also? I am home now and can't hear it on a ATS-909 here.

From: dunnestephen1
Topic: 1204 Message: 1204

Hi

I am new here: nice site.

I am on the West coast of Ireland, Co.Donegal.

I was listening to MW band on my ICF SW7600 (no external antenna) and I picked up a few UK stations with faint reception on May 13th 2007.

Manx Radio, I got on 1377; Big L International on 1404 and one called 'Cash Can Radio'???? on 1539. Did I pick this up right? Does anyone know what station this is?

Cheers

Steve

Topic: 1204 Message: 1206

Hi Tim

Yes, it was a phone-in station with people phoning in a guessing answers for 'cash'. I remember one female phoning from Manchester, if that is of any significance; as it might be a local station.

I could have misheard the name of the station although it did sound like cash-can, as it was a very faint signal.

On that point, being a bit of a novice, what can one do to help in MW dxing as far as an antenna goes? Are there specific MW antenna, different from those used for SW? Or is a wire fine atached to the telescopic antenna. I ask because I notice that the rotation of the set makes all the diference when listening to MW but nothing at all (I think)when listening to SW.

Thanks

Steve

1207. UK/Ireland Dealers & Equipment Suppliers

Yahoo group: skywavesmw

Steve - There's not so many used equipment dealers now that eBay has taken most of the business. I guess you're looking for an improvement on your analogue-tuned 7600D to get you started on Dx-ing. Maybe you should consider a new DE-1103 from the well-known dealer Liypn
http://cgi.ebay.co.uk/NIB-DE1103-SSB-SHORT-WAVE-FM-LW-MW-RADIO_W0QQitemZ260117447688
This is a tiny communications receiver pretending to be a portable radio. Also superb quality FM stereo, though not ideal for FM Dx. There's also an active loop aerial available. If you want to get more involved with MW/LW, see J?rgen's loop via his recent links - you couldn't get much simpler for a serious aerial.

Hi Julian

My existing unit is an ICF SW7600

http://stephan.win31.de/sony76-2.htm#ICF-SW7600

which as I said have had now about 13 years. Still in great condition
so I will be holding onto it to use as a portable.

I was hoping to buy, as new, something more akin to a tabletop unit
that has a few things my existing unit doesnt.

ie More memory for inputting stations (it has only 10), a 'knob' for
tuning in rather than just punching the frequency in, a decent
display, signal strength indicator, etc.

I'm not too bothered about the 2nd hand market, and was really trying
to find out who were the equipment retailers in the UK that
specialised in serious radio's and who know what they are talking about.

I could go to 'Argos', lol, but I guess that wouldnt do!

Any suggestions of good retailers, much appreciated.

Cheers

Steve

Hi Tim

No worries. Thanks for your help. MW dx'ing is new to me, and I find it pretty amazing what stations you can pick up in the evening. Last night I managed to pick up 2 stations I know from when I lived in Scotland. Clyde 2 on 1152 and Forth 2 on 1548. I am fairly confident that these must be transmitted on limited power? Being on the west coast of Ireland at coordinates lat 54.74, lon-8.61 and in a mountainous area, I was surprised to be able to listen in to these stations, albeit on variable quality. In fact the Clyde 2 broadcast was clearer than Radio 4 on 198 lw. I found this surprising as I would have imagined that BBC R4 wou;ld have been transmittd from somewhere in Northern Ireland?

Cheers

Steve

In N. Germany near the Dutch border is the Tx site for VLF
http://maps.google.de/maps?f=q&hl=de&q=ramsloh&sll=51.124213,10.546875&sspn=13.254621,27.861328&ie=UTF8&t=h&om=1&ll=53.08713,7.60947&spn=0.015852,0.043259&z=15&iwloc=addr

The image is a bit odd.
You see the red-white towers and their shade starting from each base.

But: several red-white towers point in different directions although in reality they all stand straight up. So why show they differences? Perhaps the photo was taken from an aircraft that moved in between the individual shots?

From: Jurgen Bartels
Topic: 1219 Message: 1219

Just came across The Speech Extractor LINGUA
http://home.vrweb.de/~michels/product_%20lingua_english.htm

It improves voice audio by removing noise.

Some impressive audio samples are here:
http://home.vrweb.de/~michels/sound_demo.htm

It's mainly target for HAM's using voice.
Not sure how it would assist MW-Dx

I've been having a play with Google Maps and finding the various transmitter sites in the UK.

It's still a work in progress, but please have a look at the "BBC Local Radio" and the "Commercial Radio" pages on

http://www.mediumwaveradio.com

From what limited techinical information is given, it seems to
work by knowing what a sppech waveform should sound like, and
therefore anything else must be noise, and is removed.

I see no reason why it shouldn't work for MW listening, as long as
it wasn't a music station you were listening to (it would be
interesting to hear its effect on a song with musical backing).

Indeed, it might be just the thing for public address systems that
suffer from noise or feedback.

Topic: 1222 Message: 1222

1280 WCMN Noto Uno, Arecibo PR. Noti Uno ID after jingle at toh. Fair 0200 03/07 JF

1430 WENE Endicott NY. ?Sportsradio 14-30 The Team, WENE Endicott and 1430theteam.com?. The Fox National Sports Report. Fair 0300 03/07 JF

1430 WNEL Caguas PR. Many mentions of Puerto Rico and ?Tiempo?. Mixing with Marabina and WENE. Fair 0400 03/07 JF

I have been monitoring 1330 and 1470 recently. 1470 in particular continues to produce lots of Latins. I use Winrad to view their carriers and roughly a dozen are at audio level most nights. I believe R Rafaela was present on 1470 yesterday but the ID I caught was too weak for comfort. There were also mentions of Argentina around the possible ID. Vibracion is no longer the dominant Latin here.

Several east coast North Americans were audible at local sunrise today. WWKB 1520 being one of the strongest at good / clear levels.

My Latin ewe has been dug up and moved to the far end of the garden due to electrical noise. Having it facing SW meant that it was closer to the house and pointing directly at the neighbours. The latest ewe is at 270 degrees. This will be moved to a more north-westerly facing position in another month or so. I also hope to carry out some more experiments with ewe phasing.

Good DX!

John

I live in London and this week I am getting interference from what sounds a Spanish radio station coming in on 1152 Khz 261 meters. I can hear it under LBC News 1152 mainly between 4 - 4:30 AM BST / 03:00 - 03:30 UTC.

Can anyone identify it for me?

Regards

Gary.

Disturbamce Storm Time

I wondered too. Persistent geomagnetically quiet conditions do not always provide good high lattitude MW DX reception and I have always wondered why. Maybe this additional information will help us to understand this.

Thanks John - I think the DX station is coming from Portugal. I heard LBC News 1152 mention they were going off air yesterday afternoon (UK) for transmitter work on AM. This may explain the lower power.

Regards,

Gary.

Date: 2007-08-20 18:07:38 UTC
From: Julian Hardstone
Topic: 1235 Message: 1235

On the VHF-FM Group, Will asked about a signal on 144kHz. Unless it's local QRM, it will be one of the signals shown on Jurgen's page http://dx.3sdesign.de/vlf.htm - see the last display.
Does it sound like either of the signals I have uploaded temporarily to the files section 144kHz.mp3 ?
First is 144.3. Maybe Jurgen know what these are...?

> First is 144.3. Maybe Jurgen know what these are...?

A google search of "144,6 khz" gives you this:

http://www.mysnip.de/forum-archiv/thema/8773/121525/Unbekanntes+Signal+auf+LW+144+kHz.html

Low frequency (LF) location sub-system Position calculation with datatrak is based on a network of LF transmitters. They sequentially transmit phase locked signals on two radio channels some 10% apart in the 130 kHz to 170 kHz band, using time-division multiplexing techniques. The in-vehicle equipment (locator) measures the range to each of the LF transmitter stations and computes the point of intersection of these ranges, which is translated into geographic co-ordinates (a technique known as pseudo-ranging). An important feature of Datatrak LF is that positions are repeatable, that is they are consistent over time, because the transmitters are ground based. This is a significant feature as it leads to greater reliability in the urban area. Low frequency signals do not require line-of-sight paths and hence give a better and more reliable performance in urban areas than any alternative service and are not susceptible to wide area jamming. This makes the Siemens Datatrak LF navigation network extremely reliable especially compared to other commercially available systems.

Jurgen

1237. Good Conditions!

Yahoo group: skywavesmw
Date: 2007-08-22 15:10:13 UTC
From: John Faulkner
Topic: 1237 Message: 1237

North American reception was very good overnight in Nottinghamshire.
You could have been forgiven for thinking it was the middle of winter!
CBA was fighting with 1071 and WBAL was fighting with 1089.

I have been experimenting with a new phased aerial system comprising two
ewe antennas. There is still some way to go with the experiments but
the nulls obtained overnight enabled me to get in on channels like 1290,
1300 and 1310 very easily!

I recorded 1310 overnight and three stations were consistently fighting
with the noise but never became particularly clear. Carrier traces
revealed a further two or three signals which weren't far below the
noise. Spanish and American speech were heard, together with a music
station but I could not be certain with the format due to the very weak
signal. A guess at "oldies" wouldn't be far off the mark. Nothing was
ID'd.

Cheers all!

John

Often the case, sadly. Being closer to the sea seems to help too. :0(

There has been quite a bit of west coast and Prairie reception on MW by UK DXers this last week, even into England. It has escaped me though. I did hear talk a few times on 1000kHz but it was too splattered by 999kHz. This would either have been KOMO or WMVP (Chicago). Impossible to know for sure.

CJVB 1470 was logged this morning a few miles up the road from here. I decided to record 1320 overnight but only IDd CKEC. There was presumed CJMR Mississauga on channel too with their usual Indian/Chinese broadcasts but I never IDd it. This was often stronger than CKEC but with much lower modulation.

I need to clean up my aerials. Too much noise, particularly on the ALA1530 which is not realy being used at the moment. I removed all the chokes off the feeder since I use this for TV DX in the summer. Must get them back on. Hopefully over the weekend.

Cheers

John

1250. Calling John F

Yahoo group: skywavesmw
Date: 2007-09-21 15:54:23 UTC
From: Paul Logan
Topic: 1247 Message: 1250

Hi John,

I wonder can you post some details of the coax chokes
you use. trying to kill the ever present noise here.

regards

Paul Logan,
Lisnaskea, N. Ireland.

Hi! John F here! ;0)

It would be better if you called Julian H as he supplied the ferrites for these and I don't know too much about their make-up. They are better than the ones you would get in Maplin (which I think do an OK job too) but these have some properties which are better in some way.

I'll contact him and see if he can advise.

Other than that, just stick two or three inline and this should help. Positioning may be important. Wrap as many turns of RG174 around the ferrite as will fit.

Cheers

John

Use "RF-Blockers" as shown here
http://dx.3sdesign.de/equipment.htm

a.) Put in one close to your receiver-input, that will block noise picked up by the feed line

b.) Put another one near the antenna feed point, that will block feed-line noise entering back into the antenna

If a.) is not sufficient then do b.)

Jurgen

1254. Ashfield DX Log: 26-09-07

Yahoo group: skywavesmw
Date: 2007-09-26 12:46:37 UTC
From: John Faulkner
Topic: 1254 Message: 1254

1590 XEVOZ R Tr?fico, Mexico DF. Many IDs throughout the night amid the sound of car horns. W 0202 26/09 JF
1600 WWRL New York NY. ID at toh ?AM Sixteen Hundred WWRL New York? F 0600 26/09 JF

I concentrated on 1590 and 1600 overnight. 1590 was free from DRM for a change.

1590 was dominated by XEVOZ and another Latin station from 02:00 when I started recording, until sunrise, at which point I switched to 1600 to hear an English talker, which turned out to be WWRL, plus a rock station and a Latin.

I have a few unidentified recordings from 1590 and one on 1420 from a few nights ago. Times and dates are stated in the file name.

http://www.skywaves.info/mw/1420-2332-16-09-07.mp3
There is an ID at 10 seconds.

http://www.skywaves.info/mw/1590-0203-26-09-07.mp3
ID at 9 seconds. Sounded like R Tajo (taho). Sounds far too quick to be R Trafico.

http://www.skywaves.info/mw/1590-0531-26-09-07.mp3
"K" call at 13 seconds between rock songs.

http://www.skywaves.info/mw/1590-0539-26-09-07.mp3
This ID at 11 seconds sounds like 15-20 WAVR. I presume this must be WAKR but I am not certain. My recording is definitely on 1590.

Good DX!

John
Sutton-in-Ashfield, Nottinghamshire.

Hi Mark,

I have a list of the most heard TA's where I am you
can find it here:

http://www.geocities.com/yogi540/mwswdx.html

Also theres a link to logs from the last season or two
which you might find useful.

I've given up on staying up all night btw I find the
period before and after dawn best. A good morning
where Europe fades out and everything west is still in
darkness can be really astounding to experience.

Hope you have fun (conditions a bit poop right now)

Paul Logan,
Lisnaskea, N. Ireland.

Hello David,

Seems there was quite an increase in geomagnetic activity over the last 24 hours. This will probably subdue higher lattituda paths for a few days.

West is good as the ewe has a wide forward lobe - that's where mine is pointing at the moment. The nulls are also fairly wide and reduce signals from a high angle so more of the skywaves get knocked out, hence why the ewe is such a good antenna for MW DX..

Your reception on Angelsey, to some degree, should be similar to that of Paul Logan's or that of more northerly lattitudes like northern Scotland. We had two DX trips to Angelsey back in the 80s and they both yielded west coast North American DX.

For now, just start listening on any channels which are largely clear overnight. The X band is a good place to start. 1470 is also free from Euro pean QRM all the night, except from a half hour broadcast from Monte Carlo on 1476 around 04:00.

(Yes, please give me a call over the weekend Dave)

Good DX!

I remember it well! Plus our beverage on the ground at Bwlch Derwin got several west coast stationa like KFI 640 Los Angeles - at good strength too! The ewe seems to have similar characteristics to the beverage regarding its potential for lower angle reception.

Cheers

John

Here are simulation results for beverages
http://www.seed-
solutions.com/gregordy/Amateur%20Radio/Experimentation/Beverage.htm

Here are animated plots showing what happens when you alter one parameter
http://www.seed-
solutions.com/gregordy/Amateur%20Radio/Experimentation/BevBPA.htm#1100 Foot
Benchmark Beverage with Variable Reactance Termination
Unfortunately I haven't found something similar for EWE's

Search for "Summary Table #1" it shows a good overview of antenna properties
http://www.seed-
solutions.com/gregordy/Amateur%20Radio/Experimentation/RDFMetric.htm

Because conditions can change so much form night to night you may not always know what to look for.

One thing you could do for starters is look for carriers while tuning in sideband. You will recognise how strong the carrier needs to be before it is sufficiently strong for audio. Then just zero beat on the sideband which is best for avoiding any adjacent channel splatter. Use your receiver passband if you have one as this can help you dig into the channel more easily.

Before long you will get a feel for the band and it should all become clearer.

Cheers.

John

Received your new email o.k

I fired up my RAP (Radio Acoustics Products) on MW last night. This 1947 MW,LW,SW 4 valve beast, outperformed my Palstar and Sony SW 7600GR by a considerable margin;especially background noise,which unlike the Palstar and Sony,was totally silent.
I do wonder if radio technology has advanced for the SWL and I think that the old saying,"less is more" is very true apropos of radio design.
I'm constructing an HAC One Valve RX for medium wave. I'll keep you posted.

Kind regards
Ron Pearce.

Not much transatlantic DX heard last night. The conditions have blown out a little so we need a few days of quiet geomagnetic activity so things settle down again.

How did you do Mark?

John

Hi Tim

For UHF meteor scatter try a small UHF aerial (for wider pick up) with a masthead amp quite low say 6ft angled upwards about?20%.

Good DX

Cyril

Subject: [skywavesmw] things to Do Out of season- Meteor scatter

In case anyones interested, today i decided to see how high i could receive random Meteor Pings,

This Morning i started on E5 (175.25) and when i logged a ping on that channel i moved up to the next one etc etc, i now seem to be "stuck" on E9 (203.25mhz) its the first channel i've come to without frequent pings, though Meteors always drop off around midday

?

so far my highest random ping today is 196.250 (E8) obviously at those freqs doppler is pretty large so it would be hard to ID anything even if a complete offset list for B3 existed

?

My Goal would be to get up to UHF!? yes it can be done!

?

I have a suspicion that i caught a Ping on UHF?E21 ?back in 1993 after BBC1 had closed down, but? i didn't realise the significance

1140 WQBA Miami FL. ?Univision Radio ? La Voz de Miami?. Mention of at least two FM calls in this ID. F 06:28 03/09 JF

I recorded 970 overnight, looking for WSTX since other UK Dxers are beginning to report this rarity.

Usually, 970 is not too difficult a channel to access, but tonight it was splattered to pieces. WZAN was dominant but a second English station could be heard with talk around 04:00 and 05:00. Shortly before 06:00 there was quite a pile-up on the channel. At 06:00 a male talker was fighting with WZAN but both were quite weak at this time. Lively Latin music was taking over at 06:03.

Conditions are not great but they are improving. Check around local sunrise in the UK.

I will probably be on 970 again tomorrow night.

Topic: 1289 Message: 1289

Quite a few of the usual North Americans around at low levels most of the night though nothing spectacular by any stretch of the imagination.

WWRL is still consistent on 1600.

Carrier at 699.967 noted recently too - strong enough for audio perhaps. Wondering if this is ZP12 who have been reported down that way in the past. Need some better Latin conditions for this if so.

Good DX!

John

600 CBNA St Anthony NL. // 750, etc. Strongest NA on the band at this time. G 0120 08/10 JF
1420 CKDY Digby NS. AVR Ids and country type music. W 0530 08/10 JF
1420 WHK Cleveland OH. ?This is the Mike Gallagher Show ? WHK Cleveland ? Newstalk 14-20 WHK ? (slogan or some sort)? after ad break, briefly over CKDY. F 0559 08/10 JF

-

Firstly, a correction. My last few loggings have the wrong date on them. I have been stating month /09 instead of /10.

Conditions overnight were not great. CBNA was powering through at the bottom of the band and much stronger than any other North American.

1060 and 1420 were my chosen channels: 1060 was recorded for the first half of the morning as it had a couple of Latins, one playing classical music. Neither were IDd. 1420 had CKDY and WHK as usual.

Good DX!

From: John Faulkner
Topic: 1294 Message: 1294

1470 XEAI R Formula, Mexico City. First noted weak at 01:30. F 0130 09/10 JF
1580 CKDO Oshawa ON. ?Oshawa?s Oldies CKDO? sung jingle. Roy Orbison?s
?Pretty Woman?. W 0622 09/10 JF

Recorded 1470 most of the morning, then had a tune around the band
around 06:30. Retuning to 1290 for the sunrise period.

Tuning around 06:30 found a fairly lively band with good signals from
1520 WWKB and presuemd 1540 CHIN (E Euro language). 1440 and 1590 had
weak audible signals despite DRM QRM. Had I been able to stay awake I
think a few more reasonable loggings would have been forthcoming.

1290 had a talk/phone in programme but was too weak to hear clearly.
1290 is usually a difficult channel.

We are now in a longer run of quiet conditions but the band does not
reflect that.

Good DX!

John
Sutton-in-Ashfield, Nottinghamshire.

1000 KOMO Seattle WA. Several ?Komo One Thousand? IDs. Rolling news F
0625 16/10 JF

KOMO was a nice surprise this morning, just sat there on 1000 around sunrise. Reception was not so brief this time and continued for a good half hour or more.

Talk was also heard at the same time on 1510, mixing with WWZN - which was carrying a programme about religion and politics! Not really appropriate for a sports station, not to mention very confusing.

Good DX!

1000 KOMO Seattle WA. Several “Komo One Thousand” IDs. Rolling news F
625 16/10 JF

KOMO was a nice surprise this morning, just sat there on 1000 around
unrise. Reception was not so brief this time and continued for a good
alf hour or more.
Talk was also heard at the same time on 1510, mixing with WWZN - which
as carrying a programme about religion and politics! Not really
ppropriate for a sports station, not to mention very confusing.
Good DX!

Hello Mark,

I always use GMT/UTC so just add an hour for local time.

It is interesting that the tropical bands are good now. I am not surprised though as the far east has been coming in well for UK DXers for the last few days. I tend to concern myself only with transatlantic TA DX these days otherwise I would never have any time for anything else.

My main recording session overnight was on 1290kHz until sunrise when I had a tune around the band and discovered KOMO 1000. I heard a US talk station but failed to identify it. Likely suspects on 1290 are CJBK, WJNO and WKBK. I have heared the latter two in recent years.

Might try 1290 again tonight.

Good DX!

John

1060 XEEP R Educacion, Mexico City. ?Radio Educacion? ID at top of hour.
F 0600 17/07 JF

A disappointing night. I recorded 1060 overnight to hear at least one English talk station, plus two Spanish, one of which turned out to be R Educacion. Oddly, this also carried a mention of "Radio Canada" immediately after the ID.

At sunrise I checked around the band to hear a second North American with WBBR on 1130 and the same for 1510. I left the recorder on 1510 somewhat optimistically hoping for KGA. WWZN dominated and squashed the second station. Once again, WWZN was carrying religious programming from a ministry up to 07:00 when I heard a WWZN ID. More religious programming followed.

Good DX!

Some chokes along the coax feeder cured my noise completely, otherwise I would have had S9+10dB of the stuff!

You need to adjust the resistor while listening to a station of the back end of the ewe, so if your ewe is facing west, tune to a station on MW from the east and adjust the resistor until you reduce it to its weakest level. Try this at night, as well as in the day. Also, try to adjust with a station as near central in the band as possible. I would think Belgium 927, Germany 972 and Holland 1008 would be good ones.

You say that the vertical elements are off slightly. This will
seriously reduce the directivity of the ewe.

No problem if the supports are a little crooked (mine are not 100%
vertical) but as long as the wires fall straight down vertically.

The ewe works by phasing the two verticals together. As I understand
it, the length of wire across the top does not play much of a part in
the pick-up, as long as that is reasonably straight. My own has quite a
bow in the middle, by about three or four feet.

Cheers

1311. Ewe Question

Yahoo group: skywavesmw
Date: 2007-10-19 14:29:45 UTC
From: John Faulkner
Topic: 1310 Message: 1311

I am about to reposition the ewe so it is pointing more towards North America. i.e. around 300 degrees. It is currently in its summer position at around 250 degrees. This is only a small move but it may allow northerly paths to be received better.

I was considering using a second ewe for South America and the Caribbean and also for phasing with the North American ewe. I was wondering if it would be a bad idea to use the same support pole for both ewe wires at the feeder end. Would they interact? Maybe somebody has some knowledge or experience of this. Hopefully my graphic below will form OK.

```

Hard to tell.
Try it out:
Set up both and then adjust the resistor of the NA EWE so you get max
attenuation of backside signals.
Dismantle (drop the wire to ground at the common pole) of the SA EWE and check
the attenuation again. If it is still in the optimum stage, then interaction
was minimal.
I did it the same way when using BOG & EWE side by side

It might even be suffcient just to disconnect the SA EWE from the transformer.

Jurgen

Hi

In spite of heavy inteference from COPE Valencia and Birmingham Radio XL , I could distinctly hear some Horn of Africa music on 1296 khz around midnight CET yesterday.
Though no ID was heard, I think it is SRTC Reiba in the Sudan.

This morning on 1700 khz WEUP Alabama had the upper hand on Brownsville's La Preciosa" and the ID came at 0610 UTC after a long gospel.

Finally RUV Gufuskalar (Iceland) on LW 189 khz was audible in SSB at 2200 UTC with news in Icelandic.

Cheers de Pat (JN19)

Hello Mark,

Not sure what you mean by six inches. I think Julian or Jurgen would be better to advise on this but this is how it works in my situation.

As I understand things, the chokes are there to stop random noise getting to your receiver along the outer screen of your coax. In my case there was a noisy night-light which contained circuitry which produced S9+10dB of noise. If I understand correctly, the noise was being picked up on the coax screen and then to the receiver. Wrapping the RG174 coax around a ferrite ring a dozen times killed the interference almost dead. Then I added a further one a few feet from the aerial itself. I also added one on the psu cable a few inches from the receiver by wrapping the psu cable itself around the ferrite half a dozen times. This has completely reduced all noise.

The location of the first choke was situated a couple of feet away from the noisy night-light on the aerial side.

It is often a case of try-it-and-see.

Hopefully this will help.

Hi guys

Just thought Id pass on a change i made to my ewe.

before it was quite noisy and couldnt get a null, i thought it might be the ground as its pure sand here. So i run a wire under the grass (about 5 inches below)now its quieter and I can null off the back. Asian Sound Radio can be reduced from S9 + to S1. I suppose this is now like a flag antenna.

Hi john

Im off tomorrow so a bit less sleep tonight wont do any harm, Thinking of putting another ewe up pointing south for the Tropical Bands not sure if it would bring any benefits though.

I think I need to have a play with the resistor in the night to null a bit better

Why not? You would be able to phase the two ewes together which could
bring advantages. But that's another thing.

1328. Ewe Moved

Yahoo group: skywavesmw
Date: 2007-10-25 19:10:52 UTC
From: John Faulkner
Topic: 1328 Message: 1328

I have moved my ewe to a north-westerly direction which I hope will do three things:

1. Boost the North American signals a little.
2. reduce Latin Americans
3. Further reduce European signals.

I cannot comment on the first two yet but the lower and middle parts of medium wave are showing superb rejection of European signals. Holland 747 and 1008 are not present on the NW ewe. Germany 972 is absent. Local Nottingham 999kHz has ben replaced by a Spaniard! How does Spain do this? Each of these channels now has a Spanish station. You just cannot get rid of them, even when you are pointing away from them!

Moving to the top of the band I still find it hard to remove the German on 1422, though Luxembourg is slightly lower in strength than usual.

'Swings and roundabouts' perhaps but all will be revealed over the next few nights.

Actually, the verticals are not absolutely vertical since I moved the ewe as I appear to have pulled the horizontal section too tightly. The two wooden support poles are buckling slightly - maybe 10 degrees slant on each. This really needs correcting.

Good DX!

John

1329. Latin Takeover

Yahoo group: skywavesmw
Date: 2007-10-26 10:31:07 UTC
From: John Faulkner
Topic: 1329 Message: 1329

After moving my ewe antenna to a NW facing position yesterday I was more than surprised to find the band full of Spanish stations last night. How could this possibly be? When I saw the K indices I realised why. With a planetary K5 and K6 it's not surprising that the band was wiped out. If only this had happened around sunrise.

From memory, Latins (Spanish and Portuguese) were easily audible on 740, 750, 760, 890, 920, 930, 1010, 1140, 1280, 1310, 1320, 1390, 1430, 1470, 1510 and 1520. I recorded 1470 overnight where there were at least three Latins, one substantially off channel. 1510 had very distorted Spanish at 01:00. I could not make out anything as the distortion was so severe. I wonder who this was.

WLAM and presumed WWNN returned to 1470 at 03:30.

If only I had moved my ewe SW yesterday! ;0)

Cheers

John

1390 WPLM Plymouth MA. ?Easy 99.1? IDs. Fair over WEGP F 0033 28/10 JF

Nothing to shout about recently. Glad to hear WPLM on 1390 again. It was very briefly over WEGP. WEGP didn't last much longer either.

There was also some Latin activity on 1390 but mostly chat and without ID/faded on the top of the hour.

My listening has been restricted lately and I only tend to check the top of the hour on my recordings.

Good DX.

I use RecAll-PRO.

http://www.sagebrush.com/protech.htm

It is a simple programme, very versatile and 'does what it says on the tin' as some people like to say.

I am very fortunate in having a rather special version of this software. The one which doesn't expire after its 30 day limit. I usually pay the small amounts necessary for little programmes like this but I am inclined to continue using this for now ;0) I am currently on day 261 of my free 30 day trial.

There are other software recording packages and I hope others will chip in with their preferences. TotalRecorder is another which comes to mind though I have never used it. http://www.highcriteria.com/

Cheers

I'm using that, too.
I especailly like the annotation, I have now Winradio sent its current frequency value to RecAll for annotation, so that I later at playback can see that value back. This has been a great help later on when ID-ing the more difficult stations.
However I have to treat RecAll very nicely. In a few cases the recorded time & annotation got corrupted because RecAll was terminated when shutting down the PC or when crashing.

So I now save the recorded file to a proper filename before closing RecAll.

Also great is editing the soundfile, it's operated the same way as a text file.
An excellent idea.

1335. 1390 Oddities

Yahoo group: skywavesmw
Date: 2007-10-29 13:27:46 UTC
From: John Faulkner
Topic: 1335 Message: 1335

Recording 1390 from 23:00 last night I heard "The Patriot's Rock Radio Network" and ESPN IDs on the hour at 00:00 and 01:00. Several WBCN IDs were also heard - the Patriot's station on 104.1 FM in Boston. Several Massachusettes ads were also heard. All this was mixing with easy listening music. I can only assume WEGP are carrying the sports, but their programme schedule does not list this. Instead, they seem to be an affilliate of the Boston Red Sox. WPLM's website is under construction. The only MA station listed on 1390 is WPLM though and, if them, who is carrying the easy-listening? Surely this are simply a mix of WEGP and WPLM. No traces of WEAM and WEED - two stations I have yet to receive on 1390.

I caught a WPLM ID at 01:00 here:
http://skywaves.info/documents/MW/1390%20WPLM%20Plymouth%20MA%200100%2029-10-07%20JF.mp3

Note, this is not representative of the overall strength of WPLM which was generally at weak to fair levels.

After 01:00 TWO easy listening stations were heard, one with more of a gospel flavour.
At 01:15 I heard Spanish sports commentary. WEED?
At 01:20 Boston red Sox sports commentary
At 06:39 C&W music. Presenter doing a quiz called "Tim's Tricky Text Test", mentioning North Carolina. (There is a WADA in NC which carries country programming, listed 1kW/500W - website also under construction)

Maybe somebody knows who this Tim is and where his programme is hosted.

Cheers

John

1336. Ashfield DX Log: 30-10-07

700 HCRS2 R Sucre, Guayaquil. No less than NINE IDs! ?Sucre Informa? at top of hour. Brief snippet of Andean music. W
0500 30/10 JF
820 CM-- R Reloj, 3 sites. ID and time pips W 0456 30/10 JF
870 CMDT R Reloj, Sancti Spiritus. Usual news. Time pips each minute, ID?s, etc. Not alone on channel F 0453 30/10 JF

The recently re-positioned ewe is having a dramatiic effect on the ability to null the European powerhouses! 700 kHz has always been practically no-go unless signals are strong enough to penetrate the splatter. This morning I was pleased to hear two Latins mixing on there, a Brazilian sports commentary mixing with R Sucre from Guayaquil - my first Ecuadorian on MW! Recording here:

http://skywaves.info/documents/MW/700%20HCRS2%20R%20Sucre,%20Guayaquil%200500%2030-10-07%20JF.mp3

Apart from this, Cuban seemed to be present on several frequencies. 870 CMDT is a personal first.

700 WLW Cincinnati OH. ?700 WLW? IDs. Talk / News. F 0100 01/11 JF
1430 CHKT Toronto ON. Presumed with usual Oriental broadcasts F 0033 31/10 JF

Nothing particularly exciting overnight but it was better than a poke in the eye.

700 was the chosen channel. Once again, I am hearing a Caribbean accented presenter with nondescript, soft music, mixing with WLW this morning. The vocals at the top of the hour sound exactly like those on the Nationwide Radio audio stream so I presume this is Jamaica but of course the ID is necessary to be completely sure.

Fadeouts seem to be quite early - immediately after sunrise for the last few days.

To see how large the grey-zone actually is, look at this 90-minute wx-sat animation around that time, or also at mid afternoon
http://www.sat24.com/frame.php?html=homepage

Now at 1400 CET the shade already is visible over Karelia & Finland

I'll need some time to undertsand this sequence. Pity the time is obscured by the image.

I don't know how this corelates to the actual DX period but my observations are that the DX seems to disappear quickly as it starts to get light here. It's probably just 'conditions' but I'm sure it should be later than this.

While I remember, perhaps someone could remind me which is the best software / website for calculating distances. I wonder if there is a map where you can simply zoom in, click your location, zoom out again, repeat but clicking a distant location, then have the distance in miles and kilometres, plus a great circle bearing so you know which way t point your antennas. I'm sure such a thing exists but I can't seem to find it.

Thanks

John

The time is printed TL in yellow. Don't you see it?
You should not zoom the image, then the animation is lost

> I don't know how this corelates to the actual DX period but my
> observations are that the DX seems to disappear quickly as it starts to
> get light here. It's probably just 'conditions' but I'm sure it should

When it gets darkish the D-layer starts to disappear, so by actually seeing the darkish zone you get a better understanding than watching the drawn grey-zone line by programs like pizza.

> While I remember, perhaps someone could remind me which is the best
> software / website for calculating distances. I wonder if there is a
> map where you can simply zoom in, click your location, zoom out again,

This works pretty well with MS Autoroute. I used it just for this.

Press Ctrl-E then click on your home location, you now see the rubberband. Zoom by using the mouse wheel

Unfortunately my European 2002 version does not have the files for the roads in US/Canada or Russia

If you only load the image via this link, than you can easily zoom in by using the browser zoom function. It contains quite a bit of details
Also note the shade of the clouds when the sun is low, that tells you how high they are
The flat fog areas should indicate good tropo areas.

960 CM-- R Reloj, Cuba. Time pip on top of each minute W
0600 06/11 JF

Just cannot seem to hear much this season. I realise we are in November, one of the least productive months for TA DX, but I am finding it all a struggle. I have had less time for DXing and I am unlucky catching IDs recently. Maybe I should go back to using Winrad. Lately I have been concentrating on adding new stations into the log so I have been doing less general listening.

I was going to monitor 1450 overnight to try and catch CHUC before they close down (Nov 7 at 5 pm their time apparently) but I was hearing more on 960 at 02:00. Oldies or soft music could have been CFFX, but I thought they were off now(?). Whatever it was it barely came above the splatter after this. 960 is not an easy channel here. In fact, 940, 950 and 960 are difficult at the best of times. Local Gem AM/Classic Gold/whatever it is on 945 is a local pest. Not sure what reduces 960.

I realise I am moving closer to abandoning broadcast DXing and moving into ham radio. Not just yet though. I will persevere. I don't give up easily. ;0) Maybe in a year or two.

Good DX!

The last 2 nights before going to bed at 00:00 I did a quick MW check to look for carriers after reading http://dxlc.com/solar/ had strong signals.
The 1st night nothing at all, last night a few very weak carriers on odd frequencies, but not on 1510, 1070 or 590.

So, the northern QTHs are better off.
At least I am glad that I can sleep in peace knowing that I don't miss anything.

Two personal firsts so not a bad morning in that sense. Conditions were
a little improved from the previous nights but still poor. Fancying a
challenge, I recorded 1310 (splattered to bits by Barnsley's tx on 1305)
and I heard ..... lots of splatter! There were brief moments where
music surfaced which sounded Spanish.

960 had light pops again. Possibly rock music so maybe CFFX. I never
tried for CHUC 1450 before they closed.

Some late DX poked through at 10:45 - WWKB had a very weak signal at
this time. I could still hear the audio.

Will 'try' to do some live sunrise listening tomorrow for a change.
Let's see if I can force myself to wake up early. 8pm? Yes, that's
ridiculously early for me.

Cheers

Hi John

Ive got the ewe set up at 100 degrees, amazing !! just noise on the usual long wire etc, but Oz there on the ewe no noise just signal . 2310 2325 good signals clear as a bell !

Putting up a couple more

Mark

Great Mark! :0)

What channel will you be monitoring tonight?

May I recommend looking on channels like 680, 870, 920, 960, 1130, 1250, 1320, 1420, 1470, 1490 and 1540.

Best of luck with this.

John

1510 WLAC Nashville TN. ID ?Newsradio 15-10 WLAC? at 03:54 after ad break then quickly back beneath WWZN. F 0356

Much better reception overnight and lots heard but again few IDs.

After hearing a second station mixing with WWZN on 1510, then a third, I thought it would be a good idea to stay put. Firstly, WLAC put in an appearance before 01:00 but there was a country station competing by 03:40. Just before 04:00 an old country song was trying to dominate and I was hoping to hear a legal ID but WLAC just came in at the wrong moment and squashed it flat. I suspect the country station was KCKK (Littleton, Colorado) - heard in southern Scotland recently.

I used Winrad tonight so I could see the carriers on the channel. WWZN was clearly off frequency as usual, but WLAC and the country station were almost on top of each other, separated by a tiny amount.. A fourth carrier appeared briefly at sunrise (KGA?) but it was well below the audio threshold.

Good DX!

830 UNID Fox Sports commentary. Two ?Fox sports? IDs (Not ?Red SOX
Sports?).
Also mentioning ?On-Fox? and ?The Fox National Sports Report?.
Clearly a Fox Sports affiliate! ?USA Radio Network News? at 02:00.
WCRN or WCCO? A mixture of both stations? Winrad shows three
carriers at audio level. G 0053 12/11 JF
1310 CIWW Ottawa ON. ?Oldies 13-10? ID and oldies! Long time no hear ?
first
personal logging since the mid 80s! F 0115 12/11 JF
1540 KXEL Waterloo IA. ?UNI Basketball, Newstalk 1540 KXEL? ID. Frequently
up on top of CHIN & WDCD. G 0120 12/11 JF

Conditions still reasonable overnight, although a disturbance is
forecast for the 13th then quiet to active conditions until the 18th:
http://www.dxlc.com/solar/

1310 produced "Oldies 13-10" which is the slogan of CIWW. This is the
first time I have heard this since the mid 80s.

At 04:03 I had a second station at equal levels with WWZN playing music
similar to the Star Wars theme as the start of a programme.

I'd really like to know who my UNID 830 is. I have never anything on
here until I moved the ewe to its present NW position. According to
lists I have found, both WCCO (Iowa) and WCRN are candidates. I suspect
WCRN is the most likely but since KXEL was so good on 1540 ... etc.

Good DX!

1361. Tentative Logging: 1510 KCKK

Yahoo group: skywavesmw
Date: 2007-11-14 13:19:57 UTC
From: John Faulkner
Topic: 1361 Message: 1361

1510 KCKK Littleton CO. Presumed. Sports under WWZN. Possible
ID at top of hour
but too weak for comfort. Prob KKCK. F
peaks F 0400 13/11 JF

It's a tentative / presumed logging as there really isn't anything else
this could be, plus it's been heard by a number of other UK DXers recently.

KCKK is currently using more power for its night time transmissions than
during the day. It also has a nice radiation lobe to the north-east
which is directing more of the signal in our direction. With 25kW
beaming right at us this might be one worth looking out for over the
next few weeks. There is a reason for this.

Patrick Griffith (N0NNK), contract engineer for the KCKK relocation
project wrote the following in a recent response to a report from MWC
members Paul crankshaw:

"KCKK-1510 inherited the call sign and the classic country format about
9 months ago when 1600 switched to sports. 1510 also has a brand new
transmitter site which is still in the process of having the directional
pattern adjusted. We have been transmitting with the night pattern
during the day quite often while we make adjustments. We have to take
all of the measurements during the day so that they are not affected by
the ionosphere. It is quite possible that we were on night pattern when
you heard us. KCKK-1510 is one of those rare stations that transmits
with higher power at night and lower power during the day. "

KCKK's online slogan is "Mile High Sports" http://www.milehighsports.com/

It's not what software you run on your computer, it's just how eell or poorly screened they are, electrically. Some are better than others. Are you sure it isn't your modem or router? Switch off as much as you can or go down the ferrite ring / RG174 route.

If the worst comes to the worst, you'll just have to listen to your rx and switch off everything else.

Cheers

Hi

I checked 1470 khz this morning 0555utc but it did not seem to be Radio
Vibracion from Carupano, Venezuela as usual.
Insted I heard DURANGO (or so it seemed).
Now there's a station from Durango Mexico on this channel.
Can't possibly say I identified it though.
Was someone else on 1470 this morning with a better luck ?

Thanks

Pat in France

From: Jurgen Bartels
Topic: 1369 Message: 1369

I finally got it to work

Wideband receivers like Winradio etc. that also receive the adjacent channels allow new methods to improve AM reception you could only dream of before.

One of those is the elimination of splatter from adjacent channels that fall within the bandwith of the wanted signal. Especially useful in split channels conditions or during trans-atlantic MW-DX when 9 and 10kHz spacings overlap.

http://dx.3sdesign.de/splatter_killer.htm

Also, listen to the demo audio clip

That is absolutely astounding!

Next sentence ... "I want one!"

Problem for me is that I need to get my selectivity altered so I can use
the 7030's roofing filter. Then get the carrier offset adjusted - not
an easy task for me. This is way beyond my technical capabilities so I
would need to get help.

I do not understand the 'plugin' bit. Would I still be able to record
using my existing methods? i.e. using Winrad and RecAll-PRO?

Thanks

John

Only yesterday I discovered a bug in my plugin that caused the annoying artifacts. A real stupid bug, but in DSP you don't discover it right away, because it just "sligthly" changes the audio.

I would rather buy a wideband Rx like the SDR14 or SDR-IQ
Even my Winradio is not wide enough

> I do not understand the 'plugin' bit. Would I still be able to record
> using my existing methods? i.e. using Winrad and RecAll-PRO?

Yes.
SL does the splatter-kill & demodulation by using the (my) plugin. The audio output comes out of SL the normal way. You've probably not used that? It is like Winrad, in goes the IF, out comes the audio. You don't need Winrad, although it could run in parallel I suppose

Thank you for the explanation Jurgen.

Funds would not allow for me to buy another receiver at the moment so I would be restricted to using the 15kHz roofing filter of the 7030. I wonder if I would get 'some' decent results with this bandwidth.

Is the plugin a physical thing or a software routine?

No, I have never used SpectrumLab for this purpose. It would probably be highly preferable to Winrad because of the higher resolution of close carriers.

What do you think about the new italian Perseus SDR (which will probably be sold by SSB Electronic in Germany from beginning of December on) with its 400 kHz wide band? I have pre-ordered one and hope to get it before Christmas.

It depends, you need the full bw of the interfering signal and the part of the wanted. But since the most annoying splatter comes from closer positioned unwanted signals it should work even with 15kHz
But those 15kHz should be flat, no round off at the edges, at least the unwanted tx should not be affected by those

> Is the plugin a physical thing or a software routine?

No hardware, just software

> No, I have never used SpectrumLab for this purpose. It would probably

Winrad is a lot easier to operate by mouse. In SL you have to enter values, but you can configure some functionality that make life easier

As long as Spectrum Lab can be interfaced it will work.

SL is now been expanded for higher rates as used in SDR IQ etc.

Amazing!
Would that be possible to use on IF recordings (190khz) from SDR-IQ as well? I have a lot of them where TA signals are splattered by nearby EU´s,for example 1210 and 1450 kHz. Is it also possible to use this method to eliminate the DRM signal or is that signal not identical in both sidebands?
Is it easy to use the plugin or is it a lot of parameters to be set?

> Would that be possible to use on IF recordings (190khz) from SDR-IQ as well?

Try to load it SL
Use:
File / Audio Files / Analyze and play (with DSP)

However it may not work due to the high sample rate.
Wolfgang works on this, not sure if there's a beta out yet

> example 1210 and 1450 kHz. Is it also possible to use this method to
> eliminate the DRM signal or is that signal not identical in both sidebands?

DRM can't be removed, it has only one "sideband"

> Is it easy to use the plugin or is it a lot of parameters to be set?

There are 5 parameters to be set, so a bit complicated.

I will write an instruction set how to use it on my web page and then put the
plugin there too. First I need to clean it up from debugging stuff

> What if the offending DRM signal can be duplicated and inserted in an
> appropriate place?

You need a clean section of it, all you'll find is the sum of DRM + wanted

The only thing would be:
1. decode DRM,
2. encode it again to get a fresh & clean spectrum (hopefully the same)
3. use that spectrum to cancel out the original one.

The original spectrum has to be delayed so it matches the new one.

That's the theory, now who will try that one out .....

1384. Struggling

Yahoo group: skywavesmw
Date: 2007-11-21 12:52:56 UTC
From: John Faulkner
Topic: 1384 Message: 1384

Once again I am finding MW DXing a struggle. Although I have managed more regular overnight recordings recently I am becoming increasingly plagued by electrical noise. The location of the AOR is also situated rather close to other electrical equipment, which is switched off at night but manages to destabilise the receiver in such a way that it renders the audio very warbly. It is not really practical to rearrange things.

An brief example of the awful audio. www.skywaves.info/mw/example.mp3
The first part of the recording is local 5Live on 1071. The second is WWZN on 1510. Both recorded around midnight.

I would like to invest in an SDR receiver at some stage. Maybe I can work on this in time for next season.

Since conditions are now disturbed I recorded 970 overnight, looking for WSTX. Winrad showed the presence of quite a few carriers, at least half a dozen, but none came up to audio level.

Good DX!

John

1385. 1140 UNIDs

Yahoo group: skywavesmw
Date: 2007-11-22 13:56:15 UTC
From: John Faulkner
Topic: 1385 Message: 1385

I recorded 1140 overnight. There was English religion mixing with two Spanish stations and a Portuguese. Winrad clearly seperated each of these. The Portuguese station seemed to be carrying sports talk. I have a few snatches of this here though probably not enough to go on. At times it peaked quite nicely out of the mess on the channel.

http://skywaves.info/mw/1140-0225-22-11-07.mp3

Much better audio today too!

Good DX!

Hello Jurgen,

I don't think conditions were right for CHRB but I wondered if it might be them. The station had a 02 positive offset which is where CHRB currently sits so you could be right. Pity there was no ID.

1140 WQBA Miami FL. ?La Once Quarenta AM, La Voz de Miami? ID after promos W 0458 24/11 JF

The band sounded in slightly better shape overnight after a few recent dismal DX days.

1060 had a Spanish signal and an English sports station - both at fair levels around 01:00.

I moved to 1140 after 01:00 in the hope of catching the Brazilian or the other Spanish station I have heard there recently, but I only caught WQBA in the end, which is becoming something of a regular. CBI was also present but still weak. A possible ID from WRVA was heard on 1140 but it was too weak for comfort.

Hoping for better things tonight.

Good DX!

1391. Ever wanted to "switch off" your local tx?

Yahoo group: skywavesmw
Date: 2007-11-26 10:07:25 UTC
From: Jurgen Bartels
Topic: 1391 Message: 1391

You can now do so.

SplatAway can work as Local-Away or Pest-Away

When carefully eliminating the sidebands of a local AM tx, then you can hear
the tx underneath it on the same frequency

Last night I did this with AFN with 150 kW on 873, just 50km away from me
and it reveals from Spain SER R. Zaragoza

http://dx.3sdesign.de/audio/SuppressDemo-873-071126.mp3

It starts with suppression = ON.
AFN becomes loud each time the suppression is briefly turned off.
Towards the end SER becomes stronger and you hear it in the background of AFN
when suppression is off. At the end AFN carries music and suppression works
quite remarkable
Believe me, the antenna was not touched at all

Note: The released SplatAway cannot do this new mode, so don't try it.

So not only can you remove adjacent channel splatter, but you can remove unwanted co-channel signals too. Amazing!

It would be good if this works at night on a fading signal. I imagine the success rate will be less, but still extremely usable.

You are a genius!

Just thought - I was wondering how far away the AFN transmitter is. I would imagine there must be some degree of night time propagation of the AFN signal mixing in with this - which doesn't appear to be causing any real problems.

There's a bit fluctuation, you can hear it a little.
The whole thing is very sensitive, first I suspected the phase wasn't corrected properly, but last night discovered that I had to constantly readjust the suppression ratio, because the sidebands strength ratio varied. The problem is, you don't know in what direction, there's no indicator for it.
It is impressive that even music content gets wipe out fairly good.

It would be more difficult with 183 Europe1 about 120km.
Its sidebands show lots of selective fading and have no equal stength.

> > So not only can you remove adjacent channel splatter, but you can
> > remove unwanted co-channel signals too. Amazing!

And for this you don't need a wide band rx, the normal bw is enough.

> > It would be good if this works at night on a fading signal. I imagine
> > the success rate will be less, but still extremely usable.

Further away tx show more sudden variations of their phase. Last spring on my 1st test I tried a channel where 2 tx dominated alternatively, and each time the strongest got suppressed, so reception became quite confusing. You need a tx that is always dominating

> > You are a genius!

Thanks, I think I have to believe that. :-) :-)

890 WAMG Dedham MA. Dropped on frequency just right to hear a local ID F 0139 26/11 JF

I was surprised to hear a hymn on 1270 ar 01:48 this morning - "Oh Come All Ye Faithful" at fair levels between splashes from adjacent 1269. Either CJCB are playing Christmas carols (a little early isn't it?) or there was a religious broadcaster coming through on the channel.

I recorded 1060 overnight (excluding 04:05 - 07:00 when the audio cut out for no apparent reason, as it sometimes does, quite randomly. It always returns at the beginning of the next recording block though) and heard a mixture of two Spanish stations. One with crooning or Latin songs, the other mostly with speech. I have a recording of the two here though I don't know if anything useful can be gained from this.

http://www.skywaves.info/mw/1060-0235-26-11-07.mp3

Just had a reply from Henrik as I type - he believes the first speech on the recording is that of the Cuban, and the second (YL) is Mexico.

1396. Lowe HF125 Portable Kit + QRN Problems

Yahoo group: skywavesmw
Date: 2007-11-27 00:14:38 UTC
From: Julian Hardstone
Topic: 1396 Message: 1396

This was a thread on the Skywaves (FM-TV) Group, but belongs better on here. Nige was asking about QRN at his location, about recharging NiCad and NiMH batteries, about PLT interference, and expressing dissatisfaction with the active antenna for his Lowe HF-150

There is plenty of useful information re QRN on the RSGB website - search on 'noise' or see http://www.rsgb.org/emc/usingfilters.php
You might also be interested to see some notes I made about noise at my own location. MS FrontPage has messed up the html a bit, but you can put up with it until I tidy up by hand :-)
http://www.rosestone.me.uk/QRN.htm

NiCad's can recover some useful capacity after a few charge-discharge cycles if you arrange a full discharge of each cell via a resistor of lightbulb, but be careful not discharge more than 2 cells in series otherwise you will get reverse charge of the weaker cells, which will finish them off. The ultimate failure mechanism is either electrolyte leakage or short-circuiting by the growth of internal 'whiskers' of conducting material. (Even these can be cured for a while with a short burst of high charging current).

The last I heard about PLT (data transmission over the mains) in the UK was Apr.05 when it was announced "Scottish and Southern Energy plc (SSE) indicated that the company will not be undertaking any further rollout of PLT in the UK and is unlikely to undertake further investment in PLT technologies." Thank heavens.

The active ae for the HF-150 is probably the same as on my HF-225, which is a well-designed and useful adjunct. The sensitive amplifier will overload if you connect a long-wire in place of the short whip. Of course, it will be utterly useless if it is installed in a noisy location. An external wire ae away from noise sources or a magnetic (loop) ae rotated to null the noise are your best bet to get any weak signals. I wonder if anyone has tried the Degen active loop antenna? I guess it could be excellent for indoor use on MW and the lower SW frequencies, if you can't put anything up outside. Available from Liypn on eBay

From: Paul
Topic: 1391 Message: 1397

I was on a guided tour with members of the New Zealand Radio DX League's Wellington Branch one Sunday afternoon in the mid 70s through the studios of Radio Windy 2XW originally on 1080 then 890/1 with the spacing change. At my location across Wellington Harbour from their transmitting site, the splatter I received from them was quite bad. One of the rooms we were shown through contained the transmitter's off switch, boy was I tempted to push it!

Or you could do what a couple of people did in New Zealand. Back in 1986 I think, someone cut the guy wires on 4ZG Gore's transmitting mast - you guessed it, then tower collapsed all 400 ft of it. As far as I know, no body was ever caught.

Another case involved a Dunedin youth who was an avid fan of 3ZM in Christchurch. For some reason, the ZM stations never made it to Dunedin.

The youth's life was shattered when one of his local stations 4XD did a frequency change to place them on the channel next door. The resulting splatter made reception very difficult for the youth who ultimately set fire to 4XD's transmitting building. On this occasion the law caught up with him.

ither CJCB are playing Christmas carols (a little early isn't it?) or
here was a religious broadcaster coming through on the channel.
I recorded 1060 overnight (excluding 04:05 - 07:00 when the audio cut
ut for no apparent reason, as it sometimes does, quite randomly. It
lways returns at the beginning of the next recording block though) and
eard a mixture of two Spanish stations. One with crooning or Latin
ongs, the other mostly with speech. I have a recording of the two here
hough I don't know if anything useful can be gained from this.
http://www.skywaves.info/mw/1060-0235-26-11-07.mp3
Just had a reply from Henrik as I type - he believes the first speech on
he recording is that of the Cuban, and the second (YL) is Mexico.
Good DX!

I remember reading about Midlands based pirate UK radio having its MW Tx put out of service by some hammering a pipe in the ground & attaching a lenght of wire to it which was thrown over the long wire aerial thus shorting the transmitter to earth!

Dead easy to do & only takes moments to do!

Paul <format4nz@...> wrote:
I was on a guided tour with members of the New Zealand Radio DX League's Wellington Branch one Sunday afternoon in the mid 70s through the studios of Radio Windy 2XW originally on 1080 then 890/1 with the spacing change. At my location across Wellington Harbour from their transmitting site, the splatter I received from them was quite bad. One of the rooms we were shown through contained the transmitter's off switch, boy was I tempted to push it!

Or you could do what a couple of people did in New Zealand. Back in 1986 I think, someone cut the guy wires on 4ZG Gore's transmitting mast - you guessed it, then tower collapsed all 400 ft of it. As far as I know, no body was ever caught.

Another case involved a Dunedin youth who was an avid fan of 3ZM in Christchurch. For some reason, the ZM stations never made it to Dunedin.

The youth's life was shattered when one of his local stations 4XD did a frequency change to place them on the channel next door. The resulting splatter made reception very difficult for the youth who ultimately set fire to 4XD's transmitting building. On this occasion the law caught up with him.

So not only can you remove adjacent channel splatter, but you can remove unwanted co-channel signals too. Amazing!

It would be good if this works at night on a fading signal. I imagine the success rate will be less, but still extremely usable.

You are a genius!

John

Jurgen Bartels wrote:
You can now do so. SplatAway can work as Local-Away or Pest-Away When carefully eliminating the sidebands of a local AM tx, then you can hear the tx underneath it on the same frequency Last night I did this with AFN with 150 kW on 873, just 50km away from me and it

reveals from Spain SER R. Zaragoza http://dx.3sdesign.de/audio/SuppressDemo-873-071126.mp3 It starts with suppression = ON. AFN becomes loud each time the suppression is briefly turned off. Towards the end SER becomes stronger and you hear it in the background of AFN when suppression is off. At the end AFN carries music and suppression works quite remarkable Believe me, the antenna was not touched at all Note: The released SplatAway cannot do this new mode, so don't try it. 1402. Conditions / DX Tip

Yahoo group: skywavesmw
Date: 2007-11-30 12:38:57 UTC
From: John Faulkner
Topic: 1402 Message: 1402

Conditions are still poor - quite usual for November though

I recorded 1430 overnight which is a reasonably clear channel here. Winrad's spectrum analyser exposed no less than nine carriers, two of which were positively offset at 1420.1 and almost on top of each other. The best thing was that these carriers were up to audio level. Despite this there was a lot of difficulty hearing anything because of the co-channel 'mumble', but maybe this would be an interesting channel to keep an eye on at the moment while everything else seems so poor.

Looking at the possibilities on 1430:

WENE Endicott NY (most regular NA here with sports)
CHKT Toronto ON (ethnicm fairly regular of late)
WNSW Newark NJ (less likely)
WNEL R Tiempo, Caguas Puerto Rico
YVTP R R Bahia, Puerto La Cruz, Venezuela
YVNB R Satelite, Guacara, Venezuela
ZYJ200 R Clube Paranaense, Curitiba, Brazil

Hmmm, wonder who the others could be. Maybe some "UK Firsts" here to come.

Good DX!

John

1060 WBIX Natick MA. ID heard in pile-up at the top of the hour W 0200 05/12 JF
1329.7 HJFE RCN, Pereira. RCN ID // 980 & 760 W 0228 05/12 JF
1500 YVRZ R Dos Mil, Cumana. Back to back love songs up to 04:00 then Himno Nacional. Good peaks! G 0400 05/12 JF

Very lively conditions noted during the early part of the night and quite poor around the sunrise period.

There was a Latin (Colombian?) takeover around 02:00 - 03:00 with signals peaking well on many channels including 750, 760, 920, 980, 1130, 1140, 1250, 1320, 1330, 1390, 1420, 1430, 1470, 1480, 1500, 1510 & 1520.

Very distorted audio noted on 1510 around 02:30.

I recorded 1500 from 03:00 and 1130 from 06:00 overnight. A real pile up on both channels with ten carriers visible on 1500 and eight on 1130.

1500 was dominated by soft Latin back-to-back, which turned out to be R Dos Mil. I also thought I heard a couple of "Formula" IDs behind the Latin.

1130 had a subdued WBBR and a Latin on what appeared to be the same offset (so making it nine carriers).

Good DX!

Hello Mark

"How does the recall- pro work? is it just like a tape recordig that you listen to in the day after recording overnight. Ive just got a laptop to connect to my receiver to record. Does it show the signals, Im going to try and install Dream as well, does that record"

// RecAll-PRo is simply recording software. You can set timers, etc.

Dream will not record but you can use this to feed the IF (wide audio bandwidth) into your PC for RecAll-PRo to record. I would use Winrad instead of Dream. It is cleaner and the spectrum analyser has better resolution, showing more individual carriers. Spectrum Laboratory is actually better still but I have never used this to do the IF.

You may need Virtual Cable (free trial download) to patch the sound through to the right places - this is where you will have fun. I wish I had more time to explain but there is a bit of fiddling and setting up involved to begin with.

It's not 'ever so' complicated but the procedures are probably a lot different to anything else you may have done with radios and DX. They certainly were for me.

Cheers

John

1200 CFGO Ottawa ON. Sports. No problem with Eurosplatter tonight ? HUGE S9+10dB signal! VG 0215 07/12 JF

1310 WLOB Portland ME. ?This is Newstalk AM .? 13-10 WLOB? (Frequency didn?t sound like 13-10) Very pleased with this as not heard here since the 80s. F 0200 07/12 JF

1430 WENE Endicott NY. ?Sportsradio 14-30 The Team? IDs G 0220 07/12 JF

There were some HUGE east coast TA signals when I started listening at 2am. 1510 WWZN in particular was solid and about S9+10dB.

I was tempted to record 970, looking for WDAY Fargo (North Dakota) but I opted for 680 once more in the hope of getting CJOB but, as usual, I got the regular mix of WRKO, CFTR and HJZO. I will definitely be on 970 tonight as I hear Steve Whitt in York heard WDAY! Only problem is I probably won't be home to start my overnight recording until 3am.

Now I have fixed this problem with the newest version of Spectrum Lab.
In "Audio I/O" by using the "Sample Rate Calibrator", with that I got 48003.5
instead of the standard 48000

Using that new value the spectrum display now shows correct values.

At 0030 UTC I briefly checked and found 1390 WEGP audible, not knowing that a few minutes later 1395 R.London would fire up again. So pure luck that 1390 was available. On other frequencies a few weak carriers nothing else.

All will be better when I am at the coast again in 14 days.

1490 UNID. Sports commentary. Referring to ?Power Play? and ?Second Series?. Maybe these terms point to a particular sport (I know nothing about sporting terms btw). Never heard sports on 1490 before. W 0117 09/12 JF

1250 WEAE Pittsburgh PA. ?? sports station, 12-50 WEAE? ID W 0503 09/12 JF

1250 CHSM Steinbach MB. Presumed. Melodious instrumental music shortly after 0400, switching to harpsichord music and other classical pieces after this. Fits in with programme schedule. Fair peaks, particularly after 0800. No ID at 0800. F 0800 09/12 JF

DXing from home is becoming impossible. Last night my wife threw my radio equipment across the room once again, this time causing some minor damage to the furniture but little damage to the radios thankfully. It's not easy living with a psycopathic radio-hater. My FM equipment suffered the most (and my face - one or two bruises!) but all still works. So DXing did not begin until after 0300 this morning, after I had reconnected a few things. I hope others here who are married don't have to put up with the shit I do. Conditions were not so good as it happens - in more ways than one.

Almost past caring now.

Good DX!

Yahoo group: skywavesmw
Date: 2007-12-11 12:26:43 UTC
From: John Faulkner
Topic: 1417 Message: 1418

The ewe has both a broad angle of reception and a broad angle of rejection at 180 degrees. Also, the rejection tends to be more skyward which makes it particularly good at rejecting night time skywaves.

So, if you wish to receive the Americas, you would have your ewe running east/west. A west-facing ewe will have sufficient beamwidth to be able to receive South america, Central Anerica and the Caribbean and North America.

Does anybody have the 3D diagram to show this?

Thanks

John

From: Jurgen Bartels
Topic: 1420 Message: 1420

Improvements have been made on SplatAway to remove strong local tx and reveal signals underneath it. This works excellent when non-AGC direct-converting rx are used, like SDR-IQ or Perseus
My Winradio is less optimal due to its AGC and thus reduced dynamic input range

Bruce Conti reorded with SDR-IQ an IF file of his local 900 WGHM Nashua.
The result is really impressive, WGHM is gone, and you easily hear the two signals underneath it. That tells without the proper hardware the software can not do it

From: Jurgen Bartels
Topic: 1423 Message: 1423

This morning Vancouver tx were just a bit audible. Unfortunately high noise made it difficult. I just let the rx sit on 1410 and was surprised to see a faint waterfall trace of its carrier at 1400 local, now an hour later that carrier got stronger, also 1470 and 1130 are visible. 680 KBRW Alaska is also now clearly visible at 15:00 local
So N.Germany is close enough to the grey zone

Another qantum leap I made to simplify DXing.
Winradio is connected to SpectrumLab and my selfwritten "StationList" that imports the entire mwoffset.txt list and dynamically shows the section of only the current tuned frequency and changes automatically whenever Winradios frequency is altered. SL shows the carriers (0.5Hz resolution) and looking in small StationList window you easily see the possible stations at a glance without any mouse clicks. Adding new entries is a piece of cake now. The last 2 days I was able to ID a few more new-ones TA that I would have missed before. For example this morning on 1509.983 I heard sports, but each ID was hidden in a noise-fade. Before I alway suspected WWZN, but the offset showed it is supposedly KCUV Littleton CO
A few more carriers indicated tx from the WA area, also on other channels.

some of the rarer tx of the last 2 days

279 Turkmen Radio One (Watan) Asgabat, BLR=Off

Nice going Jurgen.

I am out of DXing again at the moment as I have been too busy to
bother. I might try an overnight recording tonight.

By the way, Winrad expires today. I hope there is a new version coming
out tomorrow.

1432. LA tx received in N.Germany

Yahoo group: skywavesmw
Date: 2007-12-31 11:18:32 UTC
From: Jurgen Bartels
Topic: 1432 Message: 1432

Excellent conditions during night and morning all accros North America,
The 1st time ever I got LA tx here while at the same time the NL and NB tx were audible on the same channels
At noon (local) the last Vancouver tx finally faded, many carriers are still there.

here are the uncommon tx:
many I have probably missed, there was simply too much, I wished I already had Perseus to record all that.

570 KNR Nuuk
640 KFI, LA also CBN St.Johns NL
660 WFAN NYC
680 CFTR Toronto
680 WRKO Boston
780 CFDR Dartmouth NS
830 WCCO Minneapolis MN
850 KOA Denver
880 WCBS NYC
930 CFBC Saint John NB
1000 KOMO Seattle WA
1000 WMVP Chicago
1010 CFRB very strong at times
1070 KNX LA also CBA Moncton NS
1140 CHRB High River, AB
1480 unid Fox Sports
1510 KGA Spokane WA
1540 WDCD Albany, NY
1540 CHIN Toronto
1540 KXEL Waterloo, IA
1630 KCJJ Iowa City IA
1660 KQWB West Fargo ND
1660 KXOL Brigham City UT

1433. Honolulu carriers in N.Germany

Yahoo group: skywavesmw
Date: 2007-12-31 16:54:14 UTC
From: Jurgen Bartels
Topic: 1433 Message: 1433

Propagation is great now.

This mid afternoon I went thru all 10kHz channels to look for weak carriers and found carriers from WA, BC and even Honolulu. At least that's what the mw-offset list indicate, so it remains speculative.
Dxers more to the north like Scotland etc, must have had audible signals

Vancouver 690, 1130 1200, 1310, 1410 1470
Washington 1510 1380 1300
Honolulu 1500 1420
Alaska:680

Happy New Year !

1434. Problems with new Winrad v1.30

Yahoo group: skywavesmw
Date: 2008-01-02 12:52:09 UTC
From: John Faulkner
Topic: 1434 Message: 1434

I have to use Virtual Audio Cable to route the audio from WaveLab through to Winrad when playing back my overnight recordings.

The problem I have since upgrading to Winrad v1.30 is that I cannot mute the un-demodulated (wideband IF) audio and hear the demodulated audio on its own. Winrad v1.25 expired on December 31st.

The situation is the same on both my laptop (with built in sound card) and my main PC (with professional M Audio sound card).

When I play back my overnight recording now I hear the DX together with the splatter from of the wideband IF audio. Plus there is another anomaly. There is also a degree of demodulated audio from the nearby European channel mixing in too.

This does not seem to be a simple case of muting the appropriate audio channel via the standard Windows audio control panel either. In any case, the M Audio sound card would show the channel where the additional audio was coming from if this was the problem.

Here are two recordings to demonstrate my dilemma.

Talk Sport: www.skywaves.info/temp/talksport.mp3 (this audio mixes with its own splatter!)
790 AM: www.skywaves.info/temp/790.mp3 (you can just hear WAXY underneath)

Does anybody knows how to resolve this?

In the meantime I am able to use the older v1.23 (Windows 98) via the Windows XP "Programme Compatibility Wizard".

Cheers

John

Why don't you play back directly in Winrad?
The rest can probably be answered by Alberto.

> In the meantime I am able to use the older v1.23 (Windows 98) via the
> Windows XP "Programme Compatibility Wizard".

Or just set back the clock.

1436. Ashfield DX Log: 03-01-08

Yahoo group: skywavesmw
Date: 2008-01-03 13:51:54 UTC
From: John Faulkner
Topic: 1436 Message: 1436

1540 KXEL Waterloo IA. ?On 15-40 KXEL? heard in sports commentary featuring The Panthers. G 0124 03/12 JF

1540 WDCD Albany NY. Usual religion struggling to compete with KXEL! Trans World Radio feature. F 0125 03/12 JF

1570 XERF La Poderosa, Cuidad Acuna. ?XERF, La Poderosa? etc. ID at top of hour struggling against CFAV. F 0601 03/12 JF

1570 CFAV Laval QC. Dominating channel all night with some good peaks. Three other stations also heard on channel. ?Radio Boomer Quinz-Soixante-Dix? IDs. Still fair levelsat 1000. G 0630 03/12 JF

1630 KCJJ Iowa City IA. ?The New 16-30 KCJJ? and pop music - Eddy Grant?s ?Electric Avenue?. At 02:54 ?You?re listening to basketball on The Mighty 16-30 KCJJ? F 0231 03/12 JF

1660 KQWB West Fargo ND. Local ads for Fargo and Moorhead on top of everything else. F 0256 03/12 JF

I am sure this will have been a very good night for some DXers.

I managed some live listening earlier in the night but left my trust with a recording after this. 1570 was my chosen channel where four carriers were at audio level. CFAV and XERF dominated. I'll bet one of the others was CKMW given that North Dakota and Iowa were well heard here. I kept checking 970 too for WDAY and there was indeed a second talk station here but splatter was a real problem - almost everywhere in fact! ESPN sports was heard on 1630 after 01:30 - presume this was WRDW, though they are listed with SNR.

I am still having problems with Winrad v1.30. Although I have found ways around the problems they are not ideal. The left/right channel settings make no difference at all. Re-setting the sampling rates stopped most of the problems. Anything above 32000 on the laptop is OK but it has to be 82000 or higher on my main machine. I cannot zoom in on individual carriers with these settings. There is also a lot of 'chirp' when listening on the laptop if the signal is strong or very noisy. I cannot see I am the only person with these difficulties so I will keep an eye on their forum and see what develops.

Good DX!

1438. "StationList" now free to use

Yahoo group: skywavesmw
Date: 2008-01-04 20:41:32 UTC
From: Jurgen Bartels
Topic: 1438 Message: 1438

To encourage your MW-offset contributions I decided to make "StationList" freeware !

As I've written, I created the small program "StationList" that imports the entire mwoffset.txt list from Guenter Lorenz
http://www.myradiobase.de/mediumwave/mwoffset.txt
and dynamically shows the section of only the current tuned frequency and changes automatically whenever Winradios frequency is altered.
"StationList" does not *require* Winradio, you can instead select the fx manually.

Its small window shows only those stations. Adding new entries is a piece of cake now. Just enter/edit the values of offset and description, it will put a time stamp on it, and will appear right away. Later on you can export those changes and send them to Guenter, but meanwhile they already appear in your list and assists you directly. It's a lot easier than to look in a conventional list. And a lot smaller than Excel, but looks similar and does more for my needs.

Hopefully this may encourage others to contribute their local tx to the offset list. I noted that it lacks Manitoba entries? In return I added/corrected many European entries, especially a number of UK LPs. Guenter will add them in the next release.

"StationList" comes with Guenters offset list already imported (Nov 26, 07), so you can start right away.

Unzip it, needs no installation. (The hookup to winradio is not included)
http://dx.3sdesign.de/StationList.zip

1410 XEBS R Sinfonola, Mexico City. ID after c&w song. Personal first. Thanks to Henrik Klemetz for confirming my recording. W 0247 08/01 JF

1580 CKDO Oshawa ON. CKDO ID. Danny & The Juniors ?At The Hop? Oldies. F 0210 08/01 JF

1600 WUNR Brookline MA. In French at the top of the hour? This is the station playing what sounds like the bassline to Queen?s ?Another One Bites The Dust? English ID heard at 03:04 ?This is WUNR AM Sixteen Hundred? F 0304 08/01 JF

Many thanks to Henrik Klemetz who spotted the Sinfonola ID. I originally thought I had Heroica R from Peru and sent my recording to Henrik, but he kindly sent me an off-air recording of the jingle ID I heard - it was not from Peru but from Mexico. If you listen to the two side-by-side you will hear clearly.

My recording: http://www.skywaves.info/mw/1410-0247-08-01-08.mp3

Henrik's Recording:
http://www.skywaves.info/mw/1410_Sinfonola_la_mas_perrona_8jan08.mp3

Both side-by-side: http://www.skywaves.info/mw/sinfonola.mp3

The signal was peaking at weak to fair levels. It's annoying how signals often fade down for the ID isn't it!

Good DX!

1445. Frenchman hears KCJJ on MW

Yahoo group: skywavesmw
Date: 2008-01-09 12:31:11 UTC
From: patrice.privat
Topic: 1445 Message: 1445
Attachments: 1 described; binary payloads are missing from this source WARC

Hi

If you are the station that played U2 "she moved in a mysterious way" at 0630 GMT (0030 Eastern Time) today after the commercials, then (and only then) you were heard here 60 miles north of Paris,France.

I use a sophisticate receiver (Icom R75) and an indoor Loop antenna (Wellbrook ALA1530) pointing westward.

I like scanning the X-band as Europe does not use the 1620 to 1700 khz section (therefore no interference).
1630 has always been a dead channel until this morning when a rock station popped in, an hour before sunrise (bast time of day).
My greatest distance on US MW is KVNS Brownsville TX "La Preciosa"

If you're the station I hear drop me an e-mail please.
If you're interested in this weird hobby of ours, contact the 2 yahoo groups (on copy) or read the Monitoring Times, an excellent American publication.

Thanks and keep up the good vibes.

1452. Recording Problem

Yahoo group: skywavesmw
Date: 2008-01-16 19:24:40 UTC
From: John Faulkner
Topic: 1452 Message: 1452

For some time, most of the season in fact, I have been wondering if there is a problem with my recording methods and the fact that I tend to use Winrad to recolve an IF recording.

What I have noticed is that I get splatter at the top of the hour on all channels. Nothing unusual there perhaps, but I have recently discovered that the splatter seems to be exactly the same on most channels. Furthermore, it is impossible to resolve this splatter within Winrad. i.e. no amount of tuning adjacent channels will find it. There is no carrier visible to indicate its presence. So it looks like it is an image from something, somewhere, resenbling SSB, but I do not know what at this stage. Maybe it's overload but it seems to be getting worse. The X band is unaffected.

Another thing I have been aware of this season is that splatter has been far more of a problem than last season. Maybe this is because there really *is* a problem.

Here is a recording of the mystery top of the hour jingle.

http://www.skywaves.info/mw/splatter.mp3

Maybe someone can suggest who or what this is. Does the actual jingle sound familiar, even though it is in SSB? This was recorded on 610 last night. 680 produces a particuarly bad case of this splatter.

For now, I will have to record the audio directly from the AOR rather than the IF.

John

1. Maybe the IF signal is too strong and causes soundcard overloading?
2. Try to reduce the RF gain to see if the ghosts are still there
3. When RF gain is zero nothing should be audible at all

1454. www.skywaves.info - Possible Downtime Yet Again

Yahoo group: skywavesmw
Date: 2008-01-17 00:52:39 UTC
From: John Faulkner
Topic: 1454 Message: 1454

Leaving things until the last minute will come as no surprise to those who know me. One of the things I have left rather late this time is the renewal of this domain. It is due to expire today, 17th!

The renewal has not taken place yet as I am in a minor dispute with Dataflame, our hosts. I purchased a two letter domain from them a couple of weeks ago. After the transaction took place and all went through I was advised by email that I had acquired the domain. Then I was advised that I could not purchase the domain as it was not for sale (which it most definitely was and has not been used before). The cost of this was less than a tenner!

I have paid the money for the domain and would expect them to honour the transaction and the domain purchase, which was available via their website. The domain was a .info address. They are refusing to let me have the domain despite everything going through and their initial email confirming everything as OK. I think all these hosting companies are as scummy as each other.

For now, I have asked them to keep the payment and just use it to pay for the skywaves domain renewal. They have agreed I am due a refund for the two letter domain, but ideally, I would want them to honour the original transaction for this and I will pay separately for www.skywaves.info.

Perhaps someone in the know can explain something gto me. If you find a two or three letter domain which is available to purchase, is it not possible for `ordinary people' to purchase them? I have also heard that it is not the usual thing for the general public to be able to purchase two and three letter domains. Are they only reserved for those with vast piles of money?

In order to try to ensure the purchase of the two letter domain, I purchased it again through another company, Streamline Net. The same thing happened, but they have recently posted to me to confirm the new domain is now ready for use. I have not had chance to set this up yet ☐ if I actually have it at all.

Thjere could be another potential problem. Streamline Net are unreachable. I cannot use their live chat as I have only purchased a domain and not a full hosting package too. Other than the live chat there is no other way to contact the company. http://www.streamline.net/ Worth avoiding I think.

I have reported these matters to ICANN three weeks ago but have heard nothing. Maybe I should try Internic as they sorted out the problems

with Web Mania.

So, it is possible that Skywaves may go down temporarily if this matter is not resolved. This includes the loss of the chat room. The Yahoo Groups will be unaffected.

On a related matter: You may remember that twatty company called Web Mania who used to host the Skywaves site. I am now receiving final demands from them regarding late payment of domains and hosting with them - which I do not have anymore! They are also sending frequent emails and post trying to get me to return to them!

Is it only me who has problems with these scummy companies?

I rcv'ed the signals very weak near Wiesbaden central Germany on 7.4075

I used just a 2 meter horizontal wire in my apartment connected to Winradio G305.
Its 12kHz at 48kS/s is fed into Spectrum Lab running a 131k FFT (0.5Hz resolution), therefore the time scale could not be expanded

I started late at 0800 UTC and did not expect anything at all with this antenna

On the 1st spectrum you see the echos becoming wider and weaker as time progressed. The 2nd spectrum shows the end at 0830 UT

Time markers are CET (UTC+1h)

RTE, you mean. That's a pity; I often used to listen to their 530m transmissions - still do, if I'm within range. Yes, I know it's on satellite, but you can't listen to that in the car or on a portable, and far too many sets still don't have LW.

1466. Advice

Yahoo group: skywavesmw
Date: 2008-01-27 17:52:18 UTC
From: markanglesey
Topic: 1466 Message: 1466

Hi Guys

Ive been monitoring 4925 to try and get RRI Jambi as reported in the last "Communication" Ive got an "Ewe" pointing in roughly the right direction. I have been listening the last few nights from about 5 onwards.
A carrier has been there from time to time, but the other night I was switching between usb and lsb to detect a carrier but happened to put the radio into fm. Lo and behold there was a full signal ! it sounded Indonesian to me. Its been there every night since. I have not had the time to sit down and listen for too long for an id etc.Its there till late 11pm ish

Tonight there are other stations there as well, is this my radio playing up? Its only on fm nothing am, very faint ssb.

Im confused

Any comments much appreciated,

Have a listen please and see if its the same with you.

Hi Mark
I have listened to this signal and those stations either side-4920 &
4930 and can only detect AM signals.
I attach a frequency trace which shows 2 signals presently on 4026.
I cannot offer an explanation of why selecting FM mode gave audio unless
it was resolving an AM carrier within its passband.
Unusual as FM usually provides rejection of AM signals

Topic: 1469 Message: 1469

Hi Dave

Thanks for your time and advice, Im thinking it could be a strong am signal either side of 4925 beeding " into the fm. If i tune to an am signal and swith on the fm its also there sometimes. This seemed different though as it was very clear, fading in and out though. Ill keep an eye on it.

Still have not picked up Indonesia I wonder if I ever will, have you had any luck ? any advice much appreciated

Thanks again

From: John Faulkner
Topic: 1469 Message: 1470

I have never had Indonesia either. The tropical bands have always been challenging but I never hear anything much there. I used to listen on many occasions but all the exotic stuff eluded me. Wouldn't mind giving it another try but I have enough on with MW.

John

1570 UNID Spanish mixing XERF. Endless phone numbers, then ?Radio Luz? ID. Thanks to Henrik Klemetz for picking this out of the mix. W 0500 09/02 JF

1620 WTAW College Station TX. ?? on WTAW College Station ? ? heard mixing WDHP. Coast To Coast programme mentioned W 0700 08/02 JF

My unidentified Radio Luz on 1570 will probably remain a mystery but I am hoping something may come of the following: Thank you to Henrik for listening to my clip of this. Henrik pointed me to this blog he found on Google: http://bostonradio.blogspot.com/2006/01/wttk-picks-up-2.html which says that WTTT Boston 1150 have switched to Spanish R Luz programming. WNSH 1570 in Beverly MA is mentioned in this and another linked blog and I wondered if they might have been relaying WTTT. http://www.fybush.com/nerw-yir2003.html says that WNSH 1570 have applied to increase power from 500W to the full 50,000W, by day anyway. My recording is here.

http://www.skywaves.info/mw/1570-0500-09-02-08.mp3

Perhaps someone knows more about all this. I have plenty more of this recording if anyone wants to hear it.

Conditions were very good overnight with many or the more difficult channels revealing DX. For instance, talk on 1020 and 1030.

1440 was alive with many carriers at audio level during Luxembourg's absence.

1200 has a second talker, as did 820 - the Texans?

Good DX!

1180 WHAM Rochester NY. Programme promo. ?11-80 WHAM? ID. G 0147 10/02 JF

1190 WLIB New York NY. Presumed with Gospel songs W 0045 10/02 JF

1200 CFGO Ottawa ON. Ad break in sports including ottawagarbage.com for a greener way to waste disposal, then back to Ottawa Senators match. G 2346 09/02 JF

1430 CHKT Toronto ON. Oriental programming. Mixing WENE. F 2349 09/02 JF

1610 CHHA Toronto ON. Reggaeton/Caribbean style rhythms // internet stream. W 0110 10/02 JF

1610 CPAM Montreal QC. ?Tropicolor?. Programme of African songs // internet stream. Personal First. VW 0115 10/02 JF

I managed more 'live' listening overnight. Conditions were quite reasonable again with one or two interesting catches.

The station behind WBBR tonight was KWKH whereas last night it was a sports station.

My unid on 1570 yesterday came to nothing. It seems WNSH on 1570 do not carry R Luz as they are not affiliated to 1150 R Luz from Boston. I wonder who this was?

Hi Mark
I have listened to this signal and those stations either side-4920 &
4930 and can only detect AM signals.
I attach a frequency trace which shows 2 signals presently on 4026.
I cannot offer an explanation of why selecting FM mode gave audio unless
it was resolving an AM carrier within its passband.
Unusual as FM usually provides rejection of AM signals

1480. Skywaves Domain "Account Suspended"

Yahoo group: skywavesmw
Date: 2008-02-13 09:55:59 UTC
From: John Faulkner
Topic: 1480 Message: 1480

Hello all!

This morning I discovered my email does not work. When checking my account with Dataflame, our hosts, I find that my account has been suspended. No reason has been given and I recently paid my subscription, so I am looking into this now.

Their "Live Help" were unable to help and they advised me to email their billing department (from another email address of course) so I am currently awaiting their response.

John Faulkner.

From: John Faulkner
Topic: 1480 Message: 1481

All is in hand and the website will reappear shortly. Their response was rather confusing as it stated that I needed to renew an old domain which expired two years ago. As it happens, the hosting has expired and needs renewing. I did not receive any of the usual reminders about this and, to be honest, I completely forgot this was due.

So the website, chat, etc. will all be back soon.

Cheers

John

920 ZYH519 R Novo Tempo, Salavador. ?Radio Novo Tempo, A Voz Do Esperanza? ID following rousing gospel singing! W 0056 12/02 JF

1420 YVNZ R Marabina, Maracaibo. OM shouting ?Marabina? IDs between Latin songs. W 0137 13/02 JF

Not much listening done here for the last few nights due to interference issues. The interference was not present when the above loggings were made, however. The X band is useless when the interference is present.

The interference is a very raspy 50Hz growl at S3-4 and goes off shortly after sunrise each morning. It is not present every night (just "most") and so far I have not been able to work out a daily pattern. All channels are affected to some degree. It was not present this morning but conditions were very poor. I also had to be up early for a meeting so no listening was possible anyway.

Although there is a lot of other noise being carried along the braiding of the coax (heard by placing a portable receiver next to the cables), none of this appears to be getting through thanks to the existing chokes.

I am in the middle of checking the wiring, re-routing it and adding a few more chokes to see if I can eliminate this horrible racket.

Good DX

From: markanglesey
Topic: 1483 Message: 1483

Not sure what it means but seems interesting

Mark

PROPAGATION
++++++++++

160 METER MYTHS

Ed Swynar, VE3CUI, of Newcastle, Ontario, took issue with a statement in last week's bulletin about the absence of sunspots being great for 160 meters. "Such mythology could not be further from the truth this year. The band has been most unremarkable this season, to say the least, and it continues to languish away in the doldrums. I thought that perhaps it was something at fault at my end: however, many subscribers to W4ZV's Topband Reflector seem to be of the same opinion." Readers have sent similar reports about both 160 and 75 meters over the past year. It seems that low geomagnetic and sunspot activity should be good for the lower frequencies, but perhaps it is not always the case.

On my website KN4LF 160 Meter Radio Propagation Theory Notes: http://www.kn4lf.com/kn4lf8.htm under:

5.) Coronal Hole-

.....Coronal Holes occur most often on the downside of a solar cycle and
their absence at the bottom of a solar cycle and at the beginning of the
next, allow for the best medium frequency radio propagation conditions. Many
think it's the lower solar flux values seen at the bottom of a solar cycle
that accounts for improved propagation conditions but it's actually pretty
much a lack of Coronal Holes and geomagnetic storming. (See definition #11.
Geomagnetic/Ionospheric Storm).....

3.) Equatorial Ring Current-
.....A phenomena that acts as a repository for precipitated electrons in the
vicinity of the magnetic equator. The electrons travel by spiraling around
north south magnetic field lines at a frequency called the 'gyro frequency.

The end result is lower latitude propagation path medium frequency transmitted RF signal blockage and absorption via the D layer. Absorption is similar to higher latitude Aurora Oval absorption and is inter-related with same.....

2.) Aurora Oval Blockage, Absorption And Refraction-

.....The aurora ovals "generally" have a negative impact on medium frequency propagation. If the path over which you are communicating lies along or inside one of the Aurora Ovals, you will experience degraded propagation in one of several forms; strong signal absorption, brief periods of strong signal enhancement, which is mainly caused by tilts in the ionosphere that allow signals to become focused at your location or very erratic signal behavior in the form of strong and rapid fading, etc., caused by a variety of effects such as multi-pathing, anomalous and rapid variations in absorption, non-great-circle propagation, horizontal or side refraction and/or scatter (skewing) due to changes in electron density and polarization changes. (See definition #7. Propagation Path Skewing).....

The bottom line is that propagation conditions will vastly improve on the MF AM broadcast band, 160 and 120 meters on the upside of solar cycle 24 in 2009 and 2010.

Have you tried to cancel it out with a 2nd antenna?

I had quite often in late morning the lower MW covered by pulse like noise.
That could be entirely removed by phasing it against the other bog.

Topic: 1484 Message: 1486

I think that is my next trial. I have been meaning to build a second ewe for South America but just cannot summon the energy. It's below freezing outside and has been for a few days so getting a ground rod in may be tricky too.

I had substantially reduced the buzz the other day after renewing some of the old chokes and adding a few new ones. I moved a few cables out of the way which were carrying some of the interference. I even cut the FM antenna cables and moved them out of the way because they seemed to be a possible source of the inteference.

You remove one problem and another starts up.

I hope to get on to this soon.

John

You could have used that one as the 2nd antenna. No need to built a full EWE
for that I suppose. Just try it before cutting it. :-)

1488. Ashfield DX Log: 17>23-02-08

Yahoo group: skywavesmw
Date: 2008-02-23 12:24:56 UTC
From: John Faulkner
Topic: 1488 Message: 1488

830 WCRN Worcester MA. Ref to ?or visit us at wcrnradio.com? after news. F 0106 23/02 JF

1580 CKDO Oshawa ON. Oldies and CKDO IDs W 0055 23/02 JF

1630 KRND Cheyenne WY. Lively ID on the half hour mentioning ?La Grande? and lively Mexican music. Personal First from home W 0230 23/02 JF

1640 WKSH Sussex WI. Radio Disney programme. W 0340 17/02 JF

A very nice surprise to hear Wyoming on 1630. Although I have heard this on local DX trips it is the first logging from home.

The band sounded lively overnight.

A Latin station was noted mixing with CBG on 1400 around 02:00.

The X band faded very early this morning so I retuned to 1470 and phased out the noise, leaving an untra-quiet channel. There were at least 20 'visible' carriers in Winrad, mostly up to audio level, but it was a complete jumble with nothing dominating for long.

1390 was a jumble too.

Good news on the noise front as I have found a way to eliminate the main problem, for as long as it lasts. Firstly, I discovered that the resistor in the ewe termination box needed adjustment. I had noticed that Germany 972 and Holland 1008 were audible so I realised something was not quite right. The adjustment improved the European null and reduced the noise slightly. Then I reactivated the ALA1530 to use as a phasing antenna. This lifted out the noise 100%! The X band in particular was a joy!

Good DX

John
Sutton-in-Ashfield, Nottinghamshire.

From: markanglesey
Topic: 1489 Message: 1489

Hi Guys

Just repositioned my ewe to point at 60 degrees, swithched on the radio to test and Australia on 2310,2325 and 2485 good readable signals, this at 17.05. looking forward to seeing what I pick up in this direction. Any ideas if there is any mw dx or tropical band to be had pointing this way. Any pointers appreciated.

How far can I tune up with the ewe ?

Thanks

Mark

From: markanglesey
Topic: 1490 Message: 1490

Hi everyone

if someone can help it would be much appreciared.

Im putting up a second ewe, I want to put it back to back with my first, how far apart do they have to be apart? The resistor ends will be closest, Im going to use the same support and earth if possible,I dont know if this will work ? Also my ground is more or less pure sand, is there any merit in connecting the earthing rods with copper wire ? I find the ewe is noisy from about 4000khz upwards would better earthing help this, my main interest is the Tropical bands.
Ive read if the ground has poor conductivity then the resistance shouldd be set higher ?

Too many questions I know, but I need some help.

I would really appreciate some advice

Thank you

Hi everyone

3325khz RRI Palangkaraya, drifting in and out, OM in language cannot id. Nothing except PNG. R. Bougainville on this frequency which is nice and quiet here on the 50 degree ewe.

Drifted off now but carrier still there, worth monitoring until about 22.30ut ish when they have their sunrise , Australia, very good tonight, a good indicator of conditions along this path, I would have thought.

Have been trying for Indonesia for a while, anyone else had any results ?

Would be nice for a fuller signal and ID but that would be hoping for too much !

Thanks John

Always wanted to get Indonesia.

Got 2 ewes up back to back now made a balun this weekend. I use the centre support for both as they point in opposite directions 240 and 50 degrees. I need to experiment more I think, as a fair bit of noise and directivity/null needs to be worked on. It could be the earth.

Hope you are well

1390 WXTC Charleston SC. Gospel songs ?Heaven 13-90? ID W 0248 04/03 JF

Very little listening here recently. I managed a quick five minute scan shortly before 03:00 this morning and just timed it right to catch WXTC on 1390. I have been hearing gospel for the last two weeks or so on 1390, usually equal levels with WEGP. This is the first positive identification and therefore the first logging I have made of WXTC in several years, possibly since the 80s. I wonder why it is suddenly so regular again?

Good DX!

Just to whet the appetites of those who wish for wider scans of MF/HFbands.
SDRs are getting better by the hour
info below concerning the QS1R receiver
At this rate of progress JF will be in a greater quandry as to which
receiver to go for
enjoy
dave G8SZX

Hi all,

I've posted four new screenshots in the Files section of the group
showing spans of:

1328 kHz

1518 kHz

1771 kHz

There is also a screenshot of 1771 kHz span with no antenna connected
to show the passband flatness.

This capability will be in the next release of SDRMAXII. You will be
surprised to hear that any bandwidth from 50 kHz to 2.5 MHz consumes
the same amount of CPU cycles as a 48 kHz bandwidth! Try that with
any other SDR in existence today!

The stated spans are USEABLE bandwidths (with no aliasing), not
sampling rates.

This is only a small preview of the cool things to come with QS1R.

F 0200 05/03 JF

Pathetic eh! **Very** disappointing conditions this month, despite periods of quiet conditions. How can this be so? I still listened regularly but there was nothing to inspire me to activate overnight recordings.

This morning I decided to make an effort and record 1600 due to hearing a Brazilian around 01:20. I needn't have bothered. It didn't last long. 1440 also had a Brazilian for a short time after 01:00.

I look forward to being in receipt of a Perseus SDR receiver in the weeks ahead. For me, this has to be the way forward for domestic medium wave Dxing. I am one of those people who needs nine or ten hours sleep at night because any amount of overnight listening seriously disrupts my daytime life. I was disappointed, however, to note that the UK price has just been increased to ?650. Has there been a price increase elsewhere?

Good DX!

John

The current MWC All Time Log lists 13 South American stations as having been logged in the UK. There are two Brazilians:

ZYK654 R Diffusion Cacique, Santos
ZYJ492 R Teresopolis, Teresopolis

Both apparently logged by Derek Taylor from Preston in 1990.

Not sure if anything Brazilian has been more recently in the UK on 1510. You might even have a new one. Definitely worth keeping an ear on.

If you have a decent recording you might want to post it to the group. Someone may be able to help.

Cheers

John

Hi John

Going to record again tonight, ivegot a tape recorder with timer on (Roberts c9950) must sort out the pc to record. Been puttin another ewe up this pm pointing 330degrees its only 20 foot long though, all i could get in that direction. I can get the 25 foot up but that's pointing exactly north.

Just joined the MWC as well, Ive got interference across the tropical bands since returning after easter ! think its from next door. Anyway been meaning to concentrate on MW for a while as Im finding the same stuff on the tropicals.

How are things

330 degrees is a waste of time now we are approaching summer. You would be better with a Latin ewe at around 240 degrees now. The ewe has a reasonable beamwidth but you are probably too far off-beam if you are serious about DXing South America on 330 degrees. 270 degrees would make a better "all rounder".

It will be interesting once Belgium 1512 has left the air for good as Brazil can appear shortly after 21:00 hours.

1515. Poorly 7030

Yahoo group: skywavesmw
Date: 2008-04-24 10:25:10 UTC
From: John Faulkner
Topic: 1515 Message: 1515

I have just been accounting elsewhere for the lack of any MW DX log here recently.

The reason for this is a poorly 7030. I can listen, but only for as long as the 7030 allows. Sometimes this is for a few minutes, sometimes for a few seconds. It is as if someone unplugs the aerial, although some signal remains. Maybe it is a problem with the pre-amp since signals become comparable to the -40dB pre-amp setting. I have only half-heartedly looked into the problem as I anticipate the delivery of my Perseus soon - in time for the next season I hope.

Regarding what I have 'heard', as opposed to 'identified': Several Brazilians here and there but none with any great signal; East coast North America has been reasonable at times, but only the most regular of regulars.

In conclusion, conditions have not been good, but there has occasionally been something around worth recording. Sadly, my 7030 has not allowed me the privilege.

Good DX!

John

Guess you'll have to bang it on the table a bit - or would that wake your wife? ;-)
When can you expect the Perseus?

Gentlemen,

Heard at 00:30 local time, for about a whole hour, at 780 kHz, AM, Rádio Primero de Marzo from Asunción, the capital of Paraguay.

Think the time in Asunción is an hour less from here and the GMT is three hours ahead.

Mostly guaranias (the guarania is the Paraguayan music par excellence) sung in both Spanish (or more appropriately Castilian, as Spanish is commonly known throughout all South America) and Guarani (the indigenous language spoken in Paraguay; Paraguay is a bilingual country so strong is the Guarani culture there).

Insterspersed, also dialogues and interviews with Paraguayans.

Never had heard a Paraguayan station on MW before (only on SW), what was amazing and noteworthy.

I've already heard, here and there in time, Paraguayan NDBs on LW, but that's another story.

Clear sound with only occasional fadings, well worth a try to be heard in the Northern Hemisphere these days: the one who succeeds will never forget!

Best,

Geraldo

Apologies to Geraldo as I have only just discovered this message which was posted to the group on May 6th.

All new members have their first posts moderated in order to stop spam. This time, Yahoo did not forward an alert to me to say that there was a message in the moderation queue.

Best wishes.

John

My Perseus arrived much quicker than I had hoped - well in time for the next MW DX season!

Installation could not have been simpler and everything worked perfectly on my main PC. My laptops were a little less forgiving though, so I have to use a slightly older version of the Perseus software (v1.0) on those.

I let Perseus record for me overnight so I could sleep. It is far simpler than the previous method I used with RecAll-PRO. Recording was made from 00:30 to 08:30 local time, which used 128GB on my external 300GB USB hard drive. Perseus records in blocks of five minutes and seamlessly links the individual files together. As it happened, we had a power cut shortly after 3am which only lasted a few minutes. No files were damaged despite this!

When playing back, I concentrated my listening on the top and bottom of each hour. This did not seem to take any longer than it used to when playing back my single-frequency recordings via Winrad.

Conditions: They weren't great, but I suppose not too bad considering the time of year. It was nice to hear Globo on 1100 again - the first time I have heard this since the 80s. There were a few other unidentified signals:

1050 English - presumed WEPN
1130 Spanish
1330 English & Spanish
1360 English
1380 English
1390 Latin
1470 Probably Vibracion
1499.985 (approximately) Latin
1570 English

Carriers were visible on many other frequencies too. This is another big bonus with Perseus: You can see the carriers long before the signals are strong enough to produce audio so you can see, ata glance, which frequencies you should be listening to. Perseus also lets you tune around the band while you record, but only within the spectrum you have chosen. This currently stands at 800kHz. I chose to record 900 - 1700 kHz.

The Perseus is an excellent DX machine and so small you could almost put it in your pocket. I can't wait to try it out on the moors with a beverage. Anybody taking a Perseus on a DXpedition would surely return with a HUGE DX log!

Good DX!

John

Hello Cyril.

Martin Lynch http://www.hamradio.co.uk are the only UK supplier. Delivery is typically six weeks but can vary. The cost has just increased from £595 to £649. I got mine before the increase.

Nico Palermo, the designer of the Perseus has designed this receiver for the DXer and actually listens and responds to user's questions on this Perseus forum. http://groups.yahoo.com/group/perseus_SDR

Currently, the Perseus will allow wideband recordings of up to 800kHz. It is thought that the next software upgrade (free online) will increase this to at least 1200kHz, which will enable you to record the entire medium wave band!

Does this sound far fetched? Yesterday, MW DXer Ken Baird in Ayrshire, sent his medium wave band so I could DX it! I had the pleasure of literally tuning the band, exactly as it is at his home QTH. This is what you can do with Perseus! Needless to say, the file sizes were rather big but they zip up quite nicely with Winrar, etc.

No need to sit in front of the radio. Do your DXing the following day or at a more convenient time.

Cheers

John

Hello Cyril.

The Perseus has just increased in price from £600 to £650 and is only available in the UK from Martin Lynch. http://www.hamradio.co.uk Delivery is tyically six weeks.

Currently, you can only record 800kHz of MW spectrum but the next software revision (free online) is expected to increase this to 1200kHz - enough to record the whole MW band!

How's this for "weird". Yesterday, MW DXer Ken Baird in Ayrshire sent me his medium wave band! That's right. In other words, he sent me some files which contained images of the band exactly as it was received on a particular night up there in Scotland. I just run these files into Perseus and tune the band in realtime, exactly as if I were at Ken's QTH. This is what you can do with Perseus.

Nico Palermo, designer of Perseus, created this amazing receiver with the DXer in mind. He actually listens and responds to DXer's questions and suggestions that are put to him in the Perseus SDR Group here: http://groups.yahoo.com/group/perseus_SDR

More Info: http://www.ssb.de/amateur/englisch/perseus/perseus_e.shtml

You won't regret it Cyril.

I discovered something else yesterday too. It *does* seem to record the whole medium wave band with its present software version!

I knew that the 800kHz bandwidth was actually larger than this but I did not think the extra bit was accessible. I discovered it could be accessed when I accidentally entered a frequency which was outside the range I had recorded and was able to listen to the channel with no apparent problems. The reason this extra bit is not included in the standard playback window is because there is supposed to be some performance degredation outside this area.

As I have said, the next software upgrade may increase the recordable bandwidth from 800kHz to 1200kHz, and I suspect continuing well beyond this in the future, who knows. But it looks like there will always be a bit either side of the range you can access, though with some reduction in performance.

Cheers

Struggling with poor conditions, but it's good to be hearing a few bits and pieces at this time of year. CHIN has been particularly good at times over the last three days.

Portuguese stations were heard on several frequencies late on the 20th/early 21st, particularly one on 1190 around 2300.

Good DX

Hello Mark.

Check http://www.skywaves.info/index.php?entityType=HTML&id=140

If you intend to use Dream for DXing rather than as a DRM receiver I
would recommend Winrad.

http://www.winrad.org/winrad

Cheers

Yes, it is superior to Dream in many ways.

* The audio quality is better
* You can zoom in more closely to see individual carriers on a single channel

Nothing wrong with Dream but I prefer Winrad for digital IF filtering any day.

You can also use Spectrum Laboratory, which is the preferred favourite for some, but I have yet to understand how to configure it.

Hi

Strange hot winds we had this morning, makes you feel dizzy, or was it the aftermath of that sweaty Music's Day in the streets of Beauvais ?

All times UTC +2

RAI UNO on IA 1100 hours onwards with Mass.
(logged in Audio, checked in parallel on Sat TV).

TV7 Tunisia on E4 real powerful in Arabic (Kids' programme including Happy Birthday to Tou in Arabic sung by choir) ; real strong like local FM from 1125 to 1230.
(logged in Audio, checked in parallel on Sat TV).

TVE1 on E2 1330 Car race.

RTP1 on E3 1500

***6M Ham traffic**

Plenty from Italian islands (IG9, IM0 ..) , Malta, Serbia, Romania, the Balearic and Morocco.

***OIRT**

none.

Good DX from Pat

Sirtel 49-70 Mhz antenna

1538. Ashfield DX Log: May/June Highlights

Yahoo group: skywavesmw
Date: 2008-06-23 13:07:23 UTC
From: John Faulkner
Topic: 1538 Message: 1538

A few entries from my June logbook. This is quite a log for mid-summer and almost resembles one of my mid-winter logbooks.

I have not been able to spend as long as I would have liked on the Perseus recordings so I have had to limit my listening.

For the record, other unidentified stations from North America which have been regular over the last few days include:

830 Sports.
870 V weak talk
920 C&W
970 Talk
1020 Talk
1030 Talk
1110 Talk
1150 Pops
1210 Talk
1230 Talk / music
1240 Talk / music
1250 God songs
1270 Music
1280 Sports
1290 Talk
1310 Oldies
1330 Talk
1360 Talk
1380 Nostalgia
1420 Music
1480 Sports
1490 Nostalgia

The more I listen to Perseus the more I am amazed by how it digs deeply between the QRM and tries to lift out the DX.

From: John Faulkner
Topic: 1542 Message: 1542

Hello,

I am selling a few more items in order to make way for a ham radio transciever and have another Icom PCR1000 for sale at the same price - ?300.

I also have a modified Sony SA3ES in good condition and a Fairmate HP2000 scanner, both in good working order.

Ultimately, I will be selling a few other items including my Uniden Superstar 3900F 11m transceiver and possibly the AOR AR7030. I am open to offers for these. Both are in perfect working order.

Good DX!

John

1543. Radio Maria 675 QSL manager

From: Giampiero58
Topic: 1543 Message: 1543

Radio Maria World Family decided to start a QSL service, as a friendly attention towards radio enthusiasts. So, after talks with Radio Maria WF President, Emanuele Ferrario, and Radio Maria WF Network Director, Claudio Re, I begun to confirm reports as QSL manager. It is a volunteer amateur service. So far we have QSL letter for Radio Maria Nederland 675 kHz and Radio Maria station in Andrate, Italy, on 26000 kHz AM and 26010 kHz DRM.

Mail address: qsl@...

If you prefere a paper confirmation, you can write to my address: Giampiero Bernardini - via Tertulliano 35 - 20137 Milano - Italy. If possible, please, add stamps, IRC, 1 dollar etc. just to help me in answering.

We'll appreciate audio clips. We are interested in knowing how you receive Radio Maria. About DRM broadcasting we'll appreciate information about audio quality, a copy of Dream software log and images of Dream software at work.

Ciao
Giampiero Bernardini

Poor conditions overnight. Only the more regular east coast North Americans were present with the strongest being 710 CKVO, 1390 WEGP and 1520 WWKB up to fair levels atbest. Not even regular WLIB was there, but instead a weak Spanish talk station dominated 1190 instead - probably R America in Argentina with a possible ID.

The best catches were R Globo on 1440 which produced several (at least four) "Globo" shouts at 0030 and CHKT Toronto on 1430. So, my rather feeble log is thus:

710 CKVO Clarenville NL. C&W music // 740. F 0030 05/07 JF
740 CHCM Marystown NL. ?Your Information Superstation VOCM? F 0030 05/07 JF
1430 CHKT Toronto ON. ?You are listening to Fairchild Radio, Toronto? W 0300 05/07 JF
1440 WJJB Westbrook ME. ?The Big Jab? with calls of other stations on the network. Sporting New Radio jingle. F 0200 05/07 JF
1440 ZHY285 R Globo, Manaus. Several mentions of ?Globo? on the half hour W 0030 05/07 JF

Cheers

From: David
Topic: 1549 Message: 1549

Its been some time since I last posted here but I have just found the site again and saved it.

Heres a video of what I can get in Clacton in the day time on my eton e5 on MW.

The radio is not in the best place so I am going to post another one later.

Also I get much more stations at night so will do one then to.

http://www.youtube.com/watch?v=ri12O6K20sA

And this is part 2 with my radio in another place.

1552. Observations this morning

Yahoo group: skywavesmw
Date: 2008-07-09 14:23:26 UTC
From: John Faulkner
Topic: 1552 Message: 1552

A few observations from a quick scan at 03:00 hours.

North American conditions continue to improve but some stronger signals are needed.

* Rolling news going well beyond 03:00, prob CFTR.
* 700 WLW heard again.
* 760 WJR heard again.
* 780 Country music.
* 920 Country music.
* 970 tried to get through the noise - vague English talk.
* 1100 WTAM ID. logged.
* 1110 English talk.
* WLIB as usual. Persistently heard but with another English talker tonight - "Newstime" ID heard.
* 1250 two stations, one with news on the hour, the other Christian music - no doubt CJYE.
* 1270 two English stations, one with country and one talking.
* 1290 English talk.
* 1430 CHKT ID.
* 1540 CHIN, strongest North American, together with 1010 CFRB/WINS.

Signals were weak at best. Surprisingly, 1510 WWZN and 1520 WWKB were subdued and WWKB was not alone.

Good DX!

Date: 2008-07-25 09:14:12 UTC
From: Jurgen Bartels
Topic: 1556 Message: 1556

I am considering to put LED lamps in the ceiling of some rooms.
Has anyone gained experiences about how much interference they may cause in the LW-MW-SW bands? FM & TV should not be a problem I think.

How about experiences with halogene lamps.

So far I have stayed away from those, but LEDs are just too tempting

1558. new rx, thoughts please

Yahoo group: skywavesmw
Date: 2008-08-04 19:21:29 UTC
From: sv_hopkins
Topic: 1558 Message: 1558

hi all,

I am currently looking for a new sdr rx. I have been looking around and the ones that seem to jump out are the Perseus and the QS1R. Also winradio's and RX320/321. Does any one have experience of both?

I like to do a lot of LW/MW dxing and dx what's left of the sw broadcast bands.

Current rigs/kit IC-R71E, ALA 1530 and a PCR1000 with a small discone using mainly Shortwave Log (which is fantastic software).

regards,

shaun

Thanks for that.
After reading more user experiences with those, I will not use them. They are no real replacement because they are much less bright than advertisements may suggest. It needs a lot more time to be further developed.
Interestingly some companies that used to produce them have silently backed out of that line.
It would have been a nice solution, oh well may be in a few years it will....

BTW:
I installed fluorescent lamps with an electronic balast. Those things create a lot of noise accross MW when I hold a portable radio at a distance of less than 5m. Once I have the feed cables to the beverages installed I will see if this noise is still a problem

I have Winradio 305 (15 kHz .. 1.8GHz) and Perseus.
I have not used Perseus much, because the MW season was over and TV-DX started.
Perseus has many nice features that Winradio does not have, like 800kHz recording. Also it is actively developed and on user input is reacted on.
Winradio team does not care about user responses at all and are very slow to fix bugs.
However I like Winradio's user interface more than that of Perseus, also the reference oscillator is more stable than in Perseus, so offset measurements don't need recalibration in between.
I am not sure how I will proceed for MW-DX.
Probably Winradio for interactively DXing and Perseus for recording when being absent.
I have not compared both sensitivities, but I suspect the difference will not be that big.

The advantages of LED lamps is that they run (like GU10) off mains
and generate hardly any waste heat. Great therefore for lighting
cupboards and small enclosed spaces.

The disadvantages are that they are (not yet) anywhere near as bright
as halogen type lamps, and even the "white" light ones are distinctly
"cold" light (ie blueish).

Easiest way I've found to reduce noise from lights and/or their
switched mode transformers is to switch them off in the house and
just have a "normal" lamp on by the radio.

Mark

I was glad to find halogen lamps that run directly off 220V, no need for a noisy transformer. You have to watch carefully in the shops not to buy 12V lamps inadvertenly.

700 WLW Cincinnati OH. ?700 WLW? ID heard in news. Mixing Spanish and Portuguese. W 0300 05/08 JF

1280 VSB-2 Hamilton, Bermuda. Presumed. ?BBN Radio? mentioned after crooning type (religious?) song. W 0100 05/08 JF

1400 CBG Gander NL. CBC News mixing Carriacou F 0100 05/08 JF

1400 Harbour Light Of The Windwards, Carriacou. ?Harbour Light? and programme info heard mixing CBG, then hymn W 0100 05/08 JF

My interference has gone! There were two problems - one was an earth loop caused by an audio cable linking my FM tuner to my main PC, while the rotating growl (recording uploaded the other day) turned out to be a failing psu on my USB drive. I have unplugged/disconnected the offending devices and am now pleased to say that I have a clean MW band again.

TA conditions were in by 23:00 but never really improved much. 02:00 was probably the peak of any reception. 920 had country and 1390 had oldies. There was a pop station on 1460 and I could hear audio on 1490 so things weren't desperately bad. 1380 had Spanish and a v weak English station.

Good DX!

Thanks for the info Jurgen. I think I may settle on the QS1R. I am still looking for info though. I can get the QS1R import tax free ;) as I have American friends. I am very impressed with the ability to record whole spectra! That is simply amazing. I have about 15 years of catching up to do.

Thanks again, 73's

Shaun

Hi,

some thoughts:

WINRADIOs and RX320/310 are out of question because of outdated technology

PERSEUS: Maybe the best SDR available with wideband RF recording (800kHz max.), used by more and more european MW-DXers

QS1R: technical more advanced than the PERSEUS (faster ADC) but so far no software with RF recording available (maybe coming soon, since the software is still under developement), needs preamplifier for serious MW DX (separate preamp/filter board under construction)

SDR-IQ: I use this sdr since 1 year for MW DX (replacement for an ICOM IC-R75) with excellent results, for shortwave a preamplifier is needed in order to catch the very weak ones, still a good choice since price (500$) is half of the price of PERSEUS,
RF recording is limited to max. 196kHz, already several control programs available (SpectraVue, SpectrumLab, SIGMIRA, WINRAD)

SDR-IP: not available yet, performance seems to be similar to QS1R, preliminary price is quite high (1500$)

bye,
Thomas

Hi Shaun,
good overview by Thomas. If you want to use span recording and playback and start using it soon, Perseus is the best bet. Later QS1R will probably become a tough competitor for it, and probably also others CiaoRadio H102. I think however that the main target for QS1R are hams, not so much DXers.

Regards,

Mauno

From: Lee Moore (Gimbert)
Topic: 1570 Message: 1570

Hi.

I am going to have a go at tapping the 455kcs from pin 1 on the crystal filter on my yaesu 817 and need an easy to order, over the internet, downconverter for DRM.

Had a look at that German site (can`t think of the name) and ordering from them is a bit involved to say the least!! - is that 50 euros they are asking - are there any other sites to order from direct??

Or is there a kit to build, available ??

Thanks.

Lee...G6ZSG.

1578. MWLIST worldwide mediumwave & longwave database

Yahoo group: skywavesmw
Date: 2008-08-16 19:40:48 UTC
From: bjorntryba
Topic: 1578 Message: 1578

Dear radio listeners and DXers,

this is a friendly invitaion to MWLIST (Mediumwave List)

welcome to MWLIST, this is a new easy to use free public
worldwide software database of mediumwave & longwave
broadcast stations.

www.mwlist.org

Additionaly, bandscans or logs can instantly be created or
edited using the PHP online MyAM tool included in MWLIST.
This makes creating bandscans much easier and handled
more practicaly, export
in csv spreapsheet format is possible, this can be converted to
excel or other formats. The regular html format can easliy be
copied and added elsewhere. Bandscans can be linked directly
to other websites and logs easily copied into forums or mailing
lists.

Our team wants to follow a new concept and our goal is to
create a much more diverse and much more usable software
and data resource than ever before for broadcast radio.

This database software can be used also as a framework for
exporting or presenting radio station data on other websites, if
you are interested in becoming a partner website of MWLIST,
please see contact details below.

For AM and MW DXers worldwide

Interested in AM radio - MW DXing - LW DXing?

Why not join the MWLIST project!

MWLIST is a (non-commercial, hobby-made) worldwide
database of MW & LW radio stations

We feature world-wide data and seek:

- Data sources for MW radio from all around the world

- Collaborators as country editors and news reporters from all
over the world

- More location or transmitter details, more technical details

- MW DXers to make use of the data for logs, bandscans and further reception analysis

MWLIST includes map, logs and bandscan features, data is available on-line, you can download it as PDF file or convert logs to a spreadsheet format. Direct linking of any bandscan is possible.

Please let us know what you think about this project, or notify us about any missing stations and more corrections.

Please have a look at http://www.mwlist.org/ or get in touch with us at:

glorenz@...

the first major update for MWLIST data from North America (CAN and USA) is now complete, these first steps included converting coordinates to precisce arcsecond readings, updating station names and call signs, removing or updating inactive stations in Canada, a few coordinates on Caribbean islands. Additionaly data for many locations in Asia was updated including precisce coordinates.

This means that if you now go to the MWLIST country list and select to show a transmitter map CAN or the US you can see amost all transmitters at once on Google Earth, try it out!

The next planned major update includes adding low power MW and TIS stations from CAN and the US, plus updating coordinates from Mexico to arcsecond readings. Next we plan to integrate day and night antenna diagram maps for US MW transmitters.

Another big data update is planned for Brasil including very presisce coordinates, already a few stations like 1220 Radio Globo use arcsecond coordinates (visible on a map link).

Any reports or suggestions, comments are most welcome. Reports can easily be done using the interface of the database software, anyone wanting to edit or update data can join our team.

Thanks for your attention and best regards

Björn Tryba and Günter Lorenz (FMLIST and MWLIST database team)

www.mwlist.org - www.fmlist.org

Thanks Mauno,

Sorry for the delay in reply. Life in the real world!

The thing that I like and to be honest draws me to the QS1R is the client/server model. I especially am drawn to it as it being open source, and myself a keen Linux user of many years (I favour Mandriva for remote administration and configuration) I much prefer to put server based items on Linux machines, and gui/user land stuff on windows - mainly due to the HUGE amount of swl/dx software that is written for windows.

I have been looking but I can't find a definitive answer, does the Perseus have a client/server software model at all? Or even any way of remote access (tcp/ip) - not remote windows desktop.
That way I could still dx from afar ;) even when I'm not at home.

What I do like is the way John and I presume others do overnight span recording then go through it the next day. Dxing and still getting sleep, fantastic! So I'd like to be able to have a remote SDR radio that can span record then actually access that data locally the next day from afar. Is that possible with any SDR's at the moment?

Aplogies for the long message,

Shaun

1580. For Skywaves DXers in Wales ...

Yahoo group: skywavesmw
Date: 2008-08-17 19:37:28 UTC
From: John Faulkner
Topic: 1580 Message: 1580

Thanks to Mark Hattam for forwarding a message from the BBC. It is a request for any Skywaves members in Wales to get in touch and talk about their radio hobby. They are running a series about people who have interesting and unusual hobbies. The programme is "Good Evening Wales", their drive-time show.

I have the contact details and will happily forward them, but for now, please email me directly for these as I am not sure if they are for public disclosure - write to me at john.faulkner@... and I will pass on the details.

Thanks

John

Thank you to Henrik for confirming my recording is that of Radio Hit on 1270 from the Dominican Republic. I had initially thought I heard "Radio Mil" but, Henrik informs that the accents could make an "H" sound like an "M". The Spanish appears to be typical of that of the Dominican Republic too.

1585. EWE Antentenna Questions -

Yahoo group: skywavesmw
Date: 2008-08-20 09:39:22 UTC
From: Lee Moore (Gimbert)
Topic: 1585 Message: 1585

I am about to commence constructing an EWE antenna and have a couple of questions !!

1/ Must the wire be single strand or multi strand, as it is recommended that for a Beverage, single strand be used ??
2/ Must the Toroid core for the transformer be a special type or will any type do as i have three 1-1/4" dia `grey` toroid core??
3/ would linking both earthing points with thick gauge copper wire be more beneficial giveing a virtual earth??

Had a nice trip to John Faulkners home Sunday gone and spent a pleasant afternoon looking at his radio gear and had a nice ride (on my scooter) back home with my head full of ideas and am now giving ham radio a bit of a break, also came back with a few bits and peices ;o)
Thanks John...

Cheers.

Lee ...G6ZSG.

Does not matter electrically, but consider the mechanical stress over a long time when the wind is moving it

> 2/ Must the Toroid core for the transformer be a special type or will
> any type do as i have three 1-1/4" dia `grey` toroid core??

Only use certain material, see here:
http://dx.3sdesign.de/dual_feed_ewe_antenna.htm

> 3/ would linking both earthing points with thick gauge copper wire be
> more beneficial giveing a virtual earth??

Then you get a loop antenna, not an EWE, and that behaves differently. If you have bad soil then it seems a good appraoch. Bruce Conti did the same and is quite happy with it. See his web site

The transformers on my ewe are the tiny two-hole variety, constructed
for me by Julian using very thin enamelled copper wire. When using
these I found I could achieve better nulling.

There are definite benefits when using specific materials here. I found
the grey cores you mention were not as good as the blue but I am not
able to explain the reasons. I don't do "techincal". Julian? But
still these are not as good as the smaller two-hole cores.

Hopefully Julian will explain.

John

Topic: 1585 Message: 1588

Thanks Jurgen, but i am using the other approach with a 1:3 wound transformer 18-6 turns on a toroidal core

Yes, well i can try it without the earth points hard wired then couple and see if it is better - i understand about the loop configuration.

Thanks for the info..

I have some of those somewhere around (from my radio construction
days) but i think the holes are a bit small for 18:6 turns unless i
use some very fine enamelled wire ..

It`s down to the electrical permeability (electrical penetration -
without going into great detail) of the ferrite powder material but,
i wouldn`t have thought that would have been so critical at the lw/mw
end of the spectrum, but i thought i should ask anyway!! maybe wind
onto transformer laminations - might work ;o)

Thanks..

1590. Re: EWE Antentenna Questions -

Yahoo group: skywavesmw
Date: 2008-08-20 16:31:44 UTC
From: Lee Moore (Gimbert)
Topic: 1585 Message: 1590

Well, I have my EWE running albeit, at the moment without an earthing resistor as i can`t find a potentiometer small enough - smallest value i have is 25k, i suppose it would work but it would be really touchy - a 5k linear would be nice as i would be shorting the wiper and one side together down to earth !!!
I used my multi transformer which has 4:1, 9:1 and 16:1 and set it to the 9:1 tapping, the case is earthed to the earth rod...
Seems a lot quieter than the `Slinky` antenna i was using but the stations are much clearer and not doubling with each other - at the moment i am listening to RTL DRM on 6095khz , you wouldn`t believe it is shortwave, nearly as good as VHF FM Wideband !! I have 6 DRM stations so far and am waiting for this evening ....
The radio is a Winradio 305i with a professional Demodulator, Wide FM - for DX - Of course!! and the DRM demodulator..
I installed the EWE with the transformer on the western end of the antenna first because my coax wasn`t long enough and as my garden lengthwise, is east west and the west side is closest to the house and i had to make up an extension lead that is how i set it up - and to be expected, it was very quiet with mainly Irish and local stations ...
I made up the lead and put the transformer at the eastern end, ran the coax back under the antenna to the house and went and tuned round and was receiving Europe again very much clearer and interference free ...I`m well pleased.

Lee...G6ZSG.

Topic: 1592 Message: 1592

Hi!!

Having fun with my EWE it`s working well - settled for 500ohm termination and coupled both earth posts together!! am now thinking of a second one firing south for Kenya and central south africa..

I`m looking for a pre-selector and have been in touch with Radioworld and Waters & Stanton to buy a MFJ 956 which tunes down to about 500khz but they`re out of stock!!! ..I have a MFJ 949e which i use for amateur bands but it stuggles to get down to 1550khz :o(

I`m also looking for a source to buy ferrite toroid rings (to experiment with) - good for 100khz - locally , there is a source locally in Brum run by a radio ham mail order but i`ve lost his phone number, maybe someone on this group has bought from him, if so, i would appreciate his number - or, any other supplier, I`ve tried googling and all i come up with are American with different part numbers!! -unless anyone has a couple they can sell me ? ? ? :o)

0500 02/09 JF

Better conditions than yesterday but not as good as on August 30th.

I may have had a WOC ID on 1420 at 0500 but it was very weak and under CKDY.

Have to agree with Martin Hall about the lack of available time to
listen to the Perseus recordings. This is often a tricky one here.

Good DX!

John

940 CINW Montreal QC. ?AM 9-40? ID with oldies F 0500 03/09 JF
940 WINZ Miami FL. Presumed with Coast To Coast over CINW F 0510 03/09 JF
950 CKNB Campbellton NB. ?Your Community, Your Radio Station, 95 CKNB?
ID before commrcial F 0438 03/09 JF
1280 VSB-2 Hamilton, Bermuda. End of BBN programme and religion F 0000
03/09 JF

Conditions not great on the 3rd and really not worth bothering with this
morning - the 4th.

Nice to be able to access 940 and 950 with relative ease now. I have
Derby's "Gold" on 945 which has previously rendered 940 and 950
virtually unusable. Well done the Perseus!

Good DX!

Yahoo group: skywavesmw
Date: 2008-09-05 10:55:30 UTC
From: John Faulkner
Topic: 1595 Message: 1595

Despite yesterday's blowout the medium wave band seemed in reasonable shape this morning. I have had a quick scan reveals many weak Latins at 0100, including one on 1240. Maybe someone further north will hear this as it is just a bit too weak here.

1390 Latin mixing WEGP prior to 0300 but ID killed by WEGP for the toh.

Same situation as above on 1370 with WDEA.

Still good conditions at 0400.

WWL 870 fair (best heard so far this season) and TBN 820 good at 0500.

Hopefully more time to check the recordings later.

Cheers

John

Good to South America but not so good for North America to begin with.
The situation reversed at sunrise when North america took over.

Early on:

750 Brazil, Spain & CBGY @ 0200, fair to good
1430 Brazil @ 0200
1440 Brazil @ 0200, fair to good

Later:

Maybe someone can make more sene of this:

http://www.skywaves.info/mw/1420-0500-09-09-08.mp3

I hear "First with ..... this is WB/V ... " ??? This wasn't
particularly weak but was well-splattered by 1422 tonight.

Good DX!

"Happiness"? Sounds good. Which frequency is this "Happiness" on? I could do with some of that! ;0)

Is there a "Sunshine" channel too? I know there are stations offering "Good News" but it's not the kind I'm looking for right now.

For the benefit of all, I recently bought an Icom IC-7000 for amateur radio use, this is the same as Tim's and I have to say how impressed I am with its medium wave performance. With much of the filtering and processing being digital, the radio is as sharp as a sharp knife (after it has just been sharpened) and very sensitive too. It hears as much as the Perseus, though without the flexibility of wideband recording, but what a DX machine for MW!

Best of luck Tim.

Off to check my overnight recording now.

Cheers

John

Mike has asked me to forward the following. Not sure if there were some technical problems at his end.

John

Hi John. Just spent an hour reading about the EWE and all the link pages (http://www.dxing.info/equipment/ewe.dx),thank you forthat, I even read about the T2FD as I have the milletary version Japanise I think, its a green fiba glass pole about 3ft tall with a 9-1 non terminating resistor at the top, and a N connector inside a upside down cup at bottom. My garden is 40ft long, the T2FD went to the top of a side wall, to get it their I drilled a hole from the inside, dropped down some rope, at ground level, put a pole to that rope first putting on a L bend and a pully with some pull up rope, went back to the inside of the loft, pulled up the pole into the hole, turned the main pole downwards so that the outside section was sky high, then U clamped it to the inside of the wall, went down to the garden pulled up the end section to the T2FD and it was sky high two floors up, LOL the idea works if you cannot get to the roof, before that I removed some tiles and stack my head onto the hole,

LOL but the rain came in, the hole idea works much better but takes timeand a lot of up and downing, your need a 12-18 inch drill, to go into somebreeze block and one brick. I think the EWE is like a bent beverage and I will give it a go.

Maybe you could post the above for others to read re he pole idea. Mike.

820 WWFD Frederick MD. Thanks to Paul C for the tip about this on the MWC e-list. I could heard this weakly in // with WWWT on 1500 W 0531 18/09 JF
820 CHAM Hamilton ON. ID ?8-20 Cham? and promo for a ?Cham Giveaway? competition W 0530 18/09 JF
820 CM-- R Reloj, 3 sites listed. Usual time pips on the minute and morse ID W 0530 18/09 JF
1290 CJBK London ON. ?Newstalk 12-90 CJBK? ID at top of hour W 0500 18/09 JF
1420 WHK Cleveland OH. ?Newstalk 14-30 WHK? Alone W 0532 18/09 JF

Thanks to a tip from Paul Crankshaw in Troon I heard WWFD on 820. Paul heard the full ID and I was able to hear this station in parallel to the Washington DC station on 1500 kHz.

A few notes:

At 0200 this morning I heard sports mixing presumed CKNX. It was only brief and did not ID at the top of the hour.

Personal first for me with 1290 CJBK.
http://www.skywaves.info/mw/1290-CJBK-0500-18-09-08.mp3

Good to see the 06:00 slot opening up for DX now. This was WWKB 1520 at this time:
http://www.skywaves.info/mw/1520-WWKB.mp3

Also I had a Spanish station on 920 at 05:31. There is a commercial mentioning Mexico:
http://www.skywaves.info/mw/920-0531-18-09-08.mp3

Conditions for most of the morning were "OK" but there was a sudden boost in reception at 05:30 when I heard 840 WHAS and 1120 KMOX. 870 WWL was quite good too. Mexican national anthem heard on 1570 at 05:00, presumed XERF. It seems there was a minor disturbance around that time and the K4 may have given things a slight lift at its onset.

An oldies station appeared on 790 shortly after 05:10 and reached fair levels. It faded conveniently between each song for the next half hour until it disappeared. I noted the "Angel Aquarius" song by Fifth Dimension at 05:20. I hardly ever hear anything other than WAXY here.

Good DX!

920 XERE Guanajuato, Celaya. Commercial for Donosti Comercial SA de CV in Celaya. Their website has four branches, one of which is in Guanajuato. Thank you to Henrik Klemetz for the research and also to Horacio Nigro in Montevideo who also spotted further information such as mentions of ?Compadre? and ?La cocina m?s bonita de M?xico?, plus further information regarding an infamous traffic intersection in Guanajuato. There is much detail but suffice to say it all points to XERE. W/F 0531 18/09 JF

---

http://www.skywaves.info/mw/920-0531-18-09-08.mp3

Very pleased to catch this. Although there is no actual ID in my recording, the information in my recording points to the following.

>From Henrik Klemetz via Real DX:

Methinks there is a match between an ad on the clip and this online address for a firm selling kitchenware etc. The firm is Donosti Comercial SA de CV, and the Celaya, Gto, branch is at:
Blvd Adolfo Lopez Mateos 546-A Col Centro
This would mean that the station is from Celaya, Guanajuato, XERE in other words. Nice catch!
Henrik

Horacio Nigro in Montevideo, Real DX, adds the following:

Detective work I have made on this:
Mexican undoubtely: they mention "Compadre", "La cocina m?s bonita de M?xico"

The cue in the recording are two streets intersection mentioned in an ad about furniture and stove shop (muebler?a) at 0:28:

"Bulevar Adolfo Lopez Mateos 546 A esq. Francisco Ju?rez"

Googling by "Bulevar Adolfo Lopez Mateos esq. Francisco Juarez" we find in http://www.oem.com.mx/elsoldelbajio/notas/n216529.htm the following text, which mentions the intersection. This webpage belongs to a traffic problem developed in 2007 in the city of Celaya.

A casi 10 minutos de que se suscitara el plant?n, se puso en marcha un operativo para el desfogue del tr?fico, realiz?ndose cierres parciales de arterias en la esquina que conforma el bulevar Adolfo Mateos y Francisco Ju?rez, bulevar Adolfo L?pez Mateos y Antonio Plaza, con miras a que la circulaci?n fluyera de manera efectiva, pero los resultados no

fueron los esperados

It seems that are several Boulevard Adolfo Lopez Mateos in Mexico, but
this city corresponds to the location of XERE.

Many thanks to Henrik and Horacio for the time taken to solve this one.
The only thing we don't have is the station identification! I have
searched on the web but different lists give a different station name.
"La Comadre", "R Integral" and others. A Google search does not reveal
any previous loggings in the UK or Europe.

Good DX!

1617. MWLIST: Major update for Brasil

Yahoo group: skywavesmw
Date: 2008-09-22 07:54:44 UTC
From: Bjorn T.
Topic: 1617 Message: 1617

Dear radio listeners,

as promised before a major data update is now ready for stations from Brasil on MWLIST (Mediumwave List).

This major country update includes:

- up to date station names or callsigns

- very detailed transmitter location data (along with street names or landscapes)

- often presisce arcsecond coordinates, enabling the transmitter to be seen on Google Earth or Google Maps.

- callsigns are now displayed in the "Code" column, because stations names can get quite long

Please check it out and take a look, and feel free to post any comments or opinions.

73 and thanks

BjÃ¶rn Tryba, editor in the MWLIST database - www.mwlist.org -

GÃ¼nter Lorenz (glorenz@...), database administrator of MWLIST

Hi all,

well what a surprise this morning was - a new one for me- Greenland (I presume) on 570 and an opening to Manitoba at dawn.

Heres what was heard (those marked * were audible on a barefoot SRF39FP Ultralight - otherwise RX was an NRD 545 with a 4 foot loop being phased against a sloping longwire of some 80 feet - mfj 1026 phaser)

960 WEAV Plattsburgh, NY, sports talk and id " The Zone 96.7 FM , 960 AM, 1320 AM" F 23:40
740 CHWO Toronto ON, light mx. G 00:35
740 CHCM Marystown, NL, VOCM weather. F 00:40
570 KNR Nuuk, Greenland, om in slow talk, low audio. W/F 05:00
950 CFAM Altona, MB, classics // 1250 music played right through TOTH. VG 05:50 *
1250 CHSM Steinbach, MB, classics // 950 in mix with others sometimes dominant. G 05:50
920 CFRY Portage La Prarie, MB, local news and weather then id " CFRY - Real Country Radio" G/Vg 05:58 *
930 WBEN Buffalo, NY, id on toth over mix of stations. G 06:00
1000 WMVP Chicago, IL, sports talk, in clear. VG 06:33 *
1290 CFRW Winnipeg, MB, Steely Dan / Dionne Warwick songs // internet G 06:25
1280 WNAM Neenah, WI, presumed, nostalgic music, always there when Manitoba is around. F/G 06:36
1540 KXEL Waterloo, IA, TOTH id "AM 1540 KXEL - Waterloo - Cedar Falls" over CHIN F/G 07:00
1580 CKDO Oshawa, ON, oldies, id. F 06:19 *

will post some recordings to youtube later.

1622. 2 Metre Skywaves Net ?

Yahoo group: skywavesmw
Date: 2008-09-23 23:38:25 UTC
From: John Faulkner
Topic: 1622 Message: 1622

While chatting to a fellow Skywaves member on 2 metres last week, it was suggested that we might organise a net for Skywaves members who are also licenced radio amateurs, possibly on 2m or 80m.

If anybody is interested in this please drop me a line with your comments and suggestions.

Thanks

John

1623. DX Alert - Transatlantic Conditions

Yahoo group: skywavesmw
Date: 2008-09-23 23:50:16 UTC
From: John Faulkner
Topic: 1623 Message: 1623

Transatlantic medium wave is off to a superb start tonight. There's a second North American station mixing with WBBR 1130 at 23:40. 1520 WWKB is at very good levels.

Hefty TA signals on many channels with some of the American signals being stronger than their neighbouring Europeans, i.e.

750 > 747
820 > 819
930 > 927
1010 > 1008
1060 > 1062
1130 > 1125 & 1134
1140 > 1143
1180 > 1179
1330 > 1332
1370 > 1368
1430 > 1431

Good DX!

1632. How to get a noise free antenna

Yahoo group: skywavesmw
Date: 2008-10-01 08:29:12 UTC
From: Jurgen Bartels
Topic: 1632 Message: 1632

I have permanently moved to this QTH were in the past I DXed here only a few days in mid winter. So I knew what to expect and how quiet it is.
My shack is now on the 1st floor and the 10m antenna feed line runs through the house 2m over ground. This unexpectedly resulted in a lot of interference/noise picked up from PC and other sources. During the past winters this was not a problem at all. But then I sat on the ground floor and the cable layed on the ground and picked up a lot less.

Putting in a RF-blocker http://dx.3sdesign.de/Cable-Assembly.jpg at the rx side did help only a little bit It worked much more effective when I used it on the ground floor. I could not figure out what the problem was.
Until I realized that the antenna itself would pick up the noise. So I held the ferrite antenna of my ATS909 at the vertical wire of the EWE and indeed heard the noise. Then I held it to the feed line entering the trasnformer, the noise was a lot louder. After disconnecting the feed line the noise at the EWE was gone, a sign that all the noise was injected into the antenna from the feed line.
So I put another rf-blocker into the feed line right at the EWE feed point. Now all the noise was gone. It was a reduction of about 20dB
For testing I removed the RF-blocker at the rx side and discovered that it only plays a small role. In the past I expected it to attenuate the most.

So it is very important to have a RF-blocker in the feed line at the antenna side. Always check with a portable radio what the antenna itself picks up when the feedline is disconnected. I also tried to ground the rx directly but this does not have any effect as expected.

I now enjoy a noise free antenna and the feed line cannot deteriorate the directivity either because feed line MW pickup cannot enter back into the antenna either

This sounds very similar to a problem I had Jurgen. Medium wave DXing became impossible a few years ago because of S9+ mains type noise, but Julian Hardstone came to the rescue. Julian inserted a ferrite ring/RG174 chokes which had the effect of eliminating 90% of the interference which, in my situation, came from a security light which was situated close to the coax cable feed.

I still have a low level of general noise as I live in abuilt up area, but this is eliminated by the excellent noise reduction on Perseus.

John

I managed to eliminate noise from a

Just going thru a Perseus recording.

On 1-Oct at 5:30 UTC I heard country style music on 1250 and 1320 from US/CAN

Just as the announcer started to talk in EE the splatter of 1251 made it inaudible.

Does anyone know who uses 1250 and 1320 ?

Hiya

Never had much T/A success under 1 Mhz (CFRB 1010 being my lowest log in frequency).
This morning there was a weak station on 560 with country music.Too weak to ID.
Much stronger was 680 khz with CFTR Toronto with news at 0615z.
There was one item about the cold wave and frosts in Maine and sports news.

From: Nick Gilly
Topic: 1641 Message: 1641

VGC, comes with manual & AOR PSU. Serial number: 101757. I don't have the remote any more but a replacement (model no IR7030-2) can be obtained from AOR UK for £27.

Only used occasionally, and I'm selling it as I don't bother with MW or HF DXing these days. I would like it to go to a good home so this seems to be a good place to advertise. Price: £250.

Please contact me off list if you are interested.

Many thanks & good DX.

Hi

Not much success with low frequencies (below 1 mhz) this morning but I discovered 2 more TA windows in my AM spectrum :

1130 khz financial news station, Bloomberg network, i did not hear the c/s but strongly suspect WBBR New York as the ads mentionned New Jersey and the Northeast.
Pretty good at peaks, short fadings.

1100 khz briefly at 0615z with prophecy nonsense about the financial crisis, could be WTAM Cleveland with one of their nightly shows verging on the irrational.

Also worth noticing is the fact that the X-band is pretty weak at the moment.

680 khz, Toronto was weak and there was a Spanish station with music underneath.
I checked with Rebelde on 5025 khz but it did not match.

Cheers de Pat

Hi all,

I wonder does anyone know where i can get some FT 114-77 toroids - as used in Jurgens noise killers.

I take it that these are used because they can specifically choke down at 1mhz?. Will any others do?

I have permanently moved to this QTH were in the past I DXed here only a few

days in mid winter. So I knew what to expect and how quiet it is.

My shack is now on the 1st floor and the 10m antenna feed line runs through the

house 2m over ground. This unexpectedly resulted in a lot of interference/ noise

picked up from PC and other sources. During the past winters this was not a

problem at all. But then I sat on the ground floor and the cable layed on the

ground and picked up a lot less.

Putting in a RF-blocker http://dx.3sdesign. de/Cable- Assembly. jpg at the rx side

did help only a little bit It worked much more effective when I used it on the

ground floor. I could not figure out what the problem was.

Until I realized that the antenna itself would pick up the noise. So I held the

ferrite antenna of my ATS909 at the vertical wire of the EWE and indeed heard

the noise. Then I held it to the feed line entering the trasnformer, the noise

was a lot louder. After disconnecting the feed line the noise at the EWE was gone, a sign that all the noise was injected into the antenna from the feed line.

So I put another rf-blocker into the feed line right at the EWE feed point. Now all the noise was gone. It was a reduction of about 20dB

For testing I removed the RF-blocker at the rx side and discovered that it only plays a small role. In the past I expected it to attenuate the most.

So it is very important to have a RF-blocker in the feed line at the antenna side. Always check with a portable radio what the antenna itself picks up when the feedline is disconnected. I also tried to ground the rx directly but this does not have any effect as expected.

I now enjoy a noise free antenna and the feed line cannot deteriorate the directivity either because feed line MW pickup cannot enter back into the antenna either

Paul,
the -77 specifies the material, it should be 77 or 75
77 is easier to get here in Germany, 75 would be better
http://www.reichelt.de
search for FT 114-77

don't use any other material, like -43 that is good for higher frequencies.

114 specifies the size
the larger the size the higher AL value it has, so to get the same inductivity
you need to wind less turns. Or you get a higher inductivity when fully wound,
and that's what you want, because it more effectively blocks the lower
frequency noise on LW and below

Instead of FT-114-77 (19mm inner diameter) I now use the larger
FT140-77 (23 mm)

The largest is FT240-77 (36mm) (price 26 EUR)
I use it for testing, to see if a blocker really makes sense. You can wind on
it ready made cables without the need to remove the plugs (even 220V or monitor
plugs)

Contrary what my web page states don't wind as much coax as possible on it when
you need it for SW too.
Just wind one layer, more would increase the capacity of the interacting
windings, and the blocking result will be reduced towards higher frequencies.

Paul,

before buying somewhere in Europe check electronic parts sellers in UK. These torroids are not *that* special and should be easy to find, and you are not loosing money due to currency exchange and shipping costs
Perhaps Julian knows a few names

If that fails then we can look around in Europe

Hi Paul,

> I have tried Sycom, Jabdog and a few others no sign of them in the UK !

This German has them, but he does not say anything about were he would ship to.
Drop him an email and ask.
http://andyquarze.de/pageID_4905341.html

This one (my favourite) sells it too, but minimum order for abroad is 150 EUR
(domestic = 10 EUR),
I guess that should be reason enough for your area to become
a German province :-)
http://www.reichelt.de

Here's another one
http://amidon.de/

The others were we normally order from don't have them

Seems a bit tougher to get than I initially expected

Paul,
This is the answer I got when I posed the query on my amateur radio reflector,

The company was called Ferromagnetics.
His callsign is GW3TMP.

another response to the query was,

Brian,
GW3TMP is far too expensive..
go to this url..

http://www.kitsandparts.com/

Dieter has excellent prices, is very helpful and extra willing to sell to UK
73 Mike G8NXD

Also this site may interest you,

Hi

Hre in Northern France, strong Greek speaking station with many songs in Greek; 0630z on 1690 khz.
Assume it is CHTO Toronto.

Someone else in Europe hears it too at sunrise ?

Cheers de Pat

Hello Patrice.

CHTO is a regular visitor with UK DXers at sunrise on 1690. It seems to dominate the frequency though is only ever weak.

Good DX!

1660. New Skywaves Amateur Radio Forum

Yahoo group: skywavesmw
Date: 2008-10-25 16:25:00 UTC
From: John Faulkner
Topic: 1660 Message: 1660

Since I renewed my amateur radio licence I have been in contact with many Skywaves members who are themselves radio amateurs.

What quickly became apparent was that there did not seem to be any UK or European based forums which catered for VHF amateur enthusiasts. The main amateur radio forum on the internet seems to be qrz.com which caters largely for American radio amateurs. It was suggested that we start our own amateur radio forum within Skywaves, but not limit it solely to existing Skywaves members.

Since the old SkywavesTech forum has now run its course we have a forum which has been sitting silently doing nothing so it was easy to make a few adjustments and create a new forum at

http://www.skywaves.info/amateurradio

If you are a radio amateur, why not take a look?

One of the thoughts about starting a UK/Europe based amateur radio forum was that the amateur bands themselves are actual forums, which is certainly true, but there are many other uses for internet based forums, not least having the facility to warn members of DX events or set up schedules, ask questions about equipment, antennas, etc. so we thought we would give it a go, but it's very early days and we need to get people posting. So, we look forward to welcoming amateurs and amateur band listeners alike to the new forum.

Please note: Because of the way in which the forum has been set up, you will need to register for membership to see posts. We are using the SMF Bulletin Board system this time rather than Yahoo

Hello Brian,

The new forum is in addition to the 80m net. We are not sure how well the amateur forum will work at this stage but thought we would give it a try. We need to do a little publcity with this yet.

The 80m net might benefit from being moved to a weekday evening as weekends have proved to be rather busy so far, particularly last Sunday when there were international DX contests calling on every channel on 160m and 80m.

Cheers

John

1380 KOTA Rapid City SD. ?Newsradio 13-80 KOTA Rapid City? heard atop
weak pile-up at toh. Personal First! Weak 0400 06/11 JF

At risk of annoying the Perseus haters even more (tough! ;0) I decided
to go over my Nov 6th recording again and found this little gem. I fell
off my chair when I heard it.

Good DX!

From: Mark Hattam
Topic: 1682 Message: 1682

Heard this for a first time definite ID here this morning as it ID'd at 02:00:40 under/over Pulse's news bulletin.

Other than that it was 1470 WLAM, 1440 WJJB, 1510 Boston, 1390 WEGP etc etc

Hi

Saturday night :

549 khz 1830z CIMR Country Monaghan IRL

1512 khz ERA Chania, Creta GRC folk songs and choirs 2110z

1107 khz Novi Sad SRB with Slavic talk 2115z

1503 khz IRIB Bushehr in Farsi IRN

Sunday Morning :

570 khz Radio Reloj with typical minute beeps CUB

600 khz Radio Rebelde Urbano Norris // 5025 khz noticias **new*** ;-)) CUB

610 khz unid EE talks about the Olympics 0655z, suspect WIOD FL

820 khz again religious station in EE, noise prevented TOH ID but St Kitts most likely culprit.

Cheers de Pat

Hi

Interesting sunrise again

610 khz my first Frech speaking Canadian; should be CHNC New Carlisle (any other FF CAN here ?) , difficult to follow the talk in LSB with voices already low in tones. 0635z. ;-))

590 khz Country music, suspect VOCM St John's 0640z ; new one too for me ;-))

610 khz CHNC faded then EE station "coast to coast" ; I know WIOD runs that show, don't they ? 0710z

670 khz Rebelde Arroyo Arenas CUB , nice // with 5025 khz (my 3rd Cuban so far) ;-)) 0715z

Cheers de Pat

1686. Spain & Portugal Survey on MW

Hi

I've heard China Radio International in Russian (Radio Kitay) today between 1400z and 1500z on 1521 khz in parallel with 7330 khz .
Does anyone know about the transmitter ?

WRTH 2007 seems to assign it to Western China (Urumqi 500 kw).
I have my doubts as it was still broad daylight here and France was hours West of the grey line.

Also Voice of Russia was heard in Farsi at 1645 and beyond 1700z on 1377 khz.

Do you think that Gavor, Armenia could be the TX site ?

Many thanx to you all.

Hi

Lots of stations on the lower MW spectrum from North America this morning :

750 , 760 ; 780 ; 790 (X2) , 830 , 840 , 870 , 880 (X2) , 920 ; 930 and 970 khz were all alive at some time or other before complete sunrise..

I clearly heard the ID of WCBS on 880 khz in New York.

As for 790 khz the competition was between a Country station and a Sports station talking at large about The Patriots.

Good Day

Hi

Not much to be gained in listening this morning.

VOCM had a nice repeated ID shortly before 0700z on 590 khz.
Unid station playing classic Rock and Jazz on 740 khz, could be CFZM Toronto.

Note that CFRB-1010 and 6-80 News were the strongest on the dial at the time.

Cheers de Pat

1707. Ashfield DX Logs: 16/17-11-08 & 6-11-08 Update

Yahoo group: skywavesmw
Date: 2008-11-17 19:59:07 UTC
From: John Faulkner
Topic: 1707 Message: 1707

Recent loggings:

1390 WFBL Baltimore MD. ?The golden age of rock and roll on Oldies 13-90 WFBL? ID heard then CNN Radio news W 0600 17/11 JF

1400 HKJM Emisora Mariana, Bogota. Emisora Mariana IDs heard and many references to Mariana. Personal First! W 0449 16/11 JF

1630 WRDW Augusta GA. ID weak in noise. Rarely heard lately W 0000 15/11 JF

1680 WTTM Lindenwold NJ. Brief English ID ?16-80 WTTM? ID before Spanish ID at toh F 0000 15/11 JF

The latest 1600kHz software release of Perseus has enabled me to hear lots of new DX which I would have otherwise missed had I been recording a single channel from the 7030. The only drawback has been the increase in the file sizes and a lack of storage space for the increase in file sizes. But there have also been some new problems to contend with:

Because of the increase in file sizes and the fact that longer nights are now with us, which will inevitably result in longer recording sessions, I realised there was a need for more file storage space. I also wanted to have the space to keep a particular night or two on file for a few days should conditions be particularly good, then I could spend more time going through the recording. So I purchased a new 1TB USB hard drive. The problem is that playback has since been almost impossible because of severe 'stuttering' on the audio. This was due to some shortfalls in the USB2 resources of my PC. At best, playback of each file was only possible for the fest few seconds of each five minute recording block, then the audio would become stuttery and unlistenable. I had to set up the overnight recording so that the top of each hour would appear at the very begining of the relevant file. Even this proved to be unlistenable at times.
To rectify the problem I ripped apart my USB drive, took out the drive itself and installed it into my PC via a serial ATA cable. The stuttering problems have gone and I have been able to check one of my recent recordings and, thankfully, I had kept hold of the recording from the 6th November, a night which was probably the best I have ever known from home. The resulting log could almost be compared with a session up in Sheigra.

Below is my updated log from 6th November now I have chance to listen to more of the recording. I woudn't be surprised if there are more loggings to come from the 6th.

680 CJOB Winnipeg MB. ?Online and in demand[?], this is Manitoba?s Information Superstation CJOB? in nasty 675 Spanish splatter. Personal

Hi

was by any chance someone on 680 khz this morning shortly before 0700 UTC ????

i had a Latino station playing Spanish songs dominating Toronto's 680 news by far.No ID heard and signal faded at the TOH then i had to rush for work.
tried 5025 khz and i can assure you it was not Rebelde..

Many thanx for your help

Hi

Plenty of action from the Americas this morning :

1700 khz KVNS Brownsville at 0545z with Fleetwood Mac.

570 khz Radio Reloj ; Santa Clara CUB news in SS

1630 khz unusual Spanish music format (Mexican style) , could be KRND "La Grande" WY but no ID heard, never been that far West but as I logged Manitoba for the first time at the same time....

1520 khz WWKB Buffalo NY 0605z , very strong as usual.

610 khz English speaking station at 0635z with news/talk ; no ID

680 khz "6-80 news" Toronto (CFTR) as usual and still that mysterious Spanish music station.

670 khz All-sports station at 0655z, suspect WSCR Chicago but no ID; at times dominated by Radio Rebelde Arroyo Arenas CUB

820 khz Saint Kitts at 0625z "this is TBN on Medium Waves, Short waves and Internet".

610 khz CHNC New Carlisle QC 0700z in French "le parlement du Québec"

1500 khz WFED MD at 0730z about the credit crunch.

1570 khz Spanish language station briefly at 0815z (XERF La Poderosa ??) but mainly CKMW Winkler, Manitoba with country, frequent ID's ; first time here. Another station (under CKMW) played Stevie Wonder's Living for the City at 0818z , suspect CFAV (as XERF has social talk at that time) but Laval station has re-runs without playlist available on website so could not confirm.
Note that CKMW only faded at 0915z !!

890 khz news briefly in English at 0807z, suspect WLS but no ID.

840khz very brief EE talk at 0830z

One from last night :

1188 khz Radio Payam Tehran with superb music,at 2045z, news in Farsi at 2100z with phone correspondants in Beirut, then Baghdad, resuming music instrumentals after news. Excellent under MDR-Info which I tried to weaken as much as possible.

Cheers de Pat

From: John Faulkner
Topic: 1714 Message: 1714

940 CINW Montreal QC. ?AM 9-40, Montreal?s Greatest Hits? Oldies F 0800 22/11 JF

1060 CKMX Calgary AB. Presumed. C&W songs with fair peaks but always faded before the end of the songs. Likely ID at 08:34 and mentions of Southern Alberta elsewhere. F 0832 22/11 JF

1130 KFAN ?On AM 11-30 KFAN Minneapolis - St Paul? and sports F 0800 22/11 JF

1290 CFRW Winnipeg MB. Oldies and vocal insert at top of hour ?You?re listening to CFRW, a CHUM radio station? F 0659 22/11 JF

1320 CHMB Vancouver BC. Presumed with Chinese YL, first noted mixing with CJMR at 07:42, then heard with CRI ID at 08:00 F 0800 22/11 JF

1490 WBAE Portland ME. ?14 Hundred WBAE? ID heard in noise at toh W 0800 22/11 JF

1510 KGA Spokane WA. ?KGA Spokane? ID heard under WWZN W 0600 21/11 JF

1650 WSKH Sussex WI. Radio Disney ID. Music // 1650 W 0400 21/11 JF

Very good conditions this morning. Also heard were 1420 WOC, presumed 1570 CKMW and 920 CFRY both with C&W.

ABC news at 07:00 on 1160 was interesting, mixing with WYLL.

Also 1150 WHBY, 1630 KRND & 1660 KQWB to mention but a few.

A talker on 1410 dominated the 08:00 slot and there was no WPOP either. A .ca web address was given out in the promo or ad leading up to the top of the hour. I guess this would be CFUN but still no ID here.

There were plenty of other interesting stations but IDs were not forthcoming.

Good DX!

John

Hi Gary,

you have picked a great time to get back into radio! We are at the bottom of the sunspot cycle and Medium Wave is in fine form.

In the last weeks I have heard stations on a tiny portable with a 1.75 inch ferrite rod from Taiwan, Korea, Mexico, the US and Canada, plus others.

Have a look at this page its the easiest 40 to hear from here in Northern Ireland, you may have a few additions to the list but have a look for these ones.

http://www.geocities.com/yogi540/mwtop40.html

Fade out times vary with conditions but I'm hearing stuff here up to and after 10 am.

If you have any questions feel free to post away ...

Good Dx

Paul Logan,

Lisnaskea, N. Ireland

Hi

not an expert meeself with only 41 TA stations in my game bag.
Easiest from here in Northern France this season are :

660 WFAN
1010 CFRB
1700 KVNS
680 CFTR
610 CHNC
REBELDE 670 CUBA
RELOJ 570 CUBA
1650 WHKT
1130 WBBR
1470 WLAM
1520 WWKB

use lsb or usb of course considering euro interference to avoid..

good hunt, it's indeed an addictive hobby even if no-ID dawns can be frustrating at times

Pat

Now that is what I call a great question from Gary I personal think we need more like that rather then LOGS logs and more LOGS, he and the other guy has inspired me to connect up my MW loop it being a spider type with DMA amp to my radio to see whats about, also seeing as I awake at 04.00 for a "I'll have a P bob" I will now start listening, also with the other guy saying "With a sunspot lownow is a good time" etc, its worth saying out of a warm bed for a few hours, if I hear anythink in the way of a LOG I will report, can we also have some MW loop details please I will try and put a photo and details about mine as soon as I can work out how to do so. Mike in BUNGAY Suffolk.

1721. Derbyshire Dales SX Trip

DERBYSHIRE DALES DX TRIP

On Thursday 20th November, Tim Bucknall and myself drove to the eastern edges of the Derbyshire Dales in search of DX from the Far East. We used the Perseus SDR receiver and ran out a 300m beverage in a north-easterly direction. This was laid on the ground and terminated via 600 ohms.

We had been planning this trip for a while but the poor conditions at the time made us think twice about venturing out. However, we thought we would give it a go in the end and just regard it as a trial so we could see how it would all fit together: The suitability of the chosen site; The tools we were using to run out the beverage and coil it back in again quickly and also to see how Perseus performed on a beverage antenna.

Everything fell into place very nicely and, despite the poor conditions, we had several interesting catches. We operated from a car. The Perseus and laptop were powered by a quiet mains inverter which itself was powered by a heavy duty leisure battery. The only real source of interference we would have had to contend with was the electronics from the car, so a 60m coax feeder was used to distance the beginning of the beverage from us. The beverage performed very well indeed and gave good nulls to many nearby European stations, such that we were also able to catch several nearer Russian stations on longwave which would otherwise have been blocked by nearer countries. The Persues did not complain once about the high signal levels which were presented to it. Here is the log:

153 R Unost, Taldom. Time pips and ID. Equal levels Donbach. F 1600 20/11
163.995 MR-1, Ulaan Baatar. Carrier. Vw 1450 20/11
198 R Mayak, Olgino. ID under BBC R4's time signal. W 1600 20/11
207 UR-1, Kyiv. "Govorit Kyiv" ID. Mixing equal levels Aholming. F 1600 20/11
209 MR-1, 3 sites listed, 3 carriers visible! Vw 1451 20/11
225 R Rossii, Surgut, Siberia. Time pips and ID under Warsaw. Vw 1600 20/11
227 MR-1, Altai. Carrier visible. Vw 1449 20/11
234 R Rossii, Angarsk, Siberia. Time pips and ID // 261. Presume Angarsk since Arman is listed as off at this time. Vw 1600 20/11
270 R Rossii, Novosibirsk, Siberia // 261kHz. Vw 1600 20/11
279 R Rossii, Selenginsk, Ykaterinberg or Gorno-Altysk. ID and time pips // others. Vw 1600 20/11
603 CBS Lukang. Music // 1521. 1359 & F 1500 20/11
612 R Mayak, Pertozavodsk, northern Russia. Lively Russian pops and chat. G 1747 20/11

702 V weak oriental music. Vw 1500 20/11
711 UNID. Oriental YL. W 1502 20/11
846 Voice of Kuanghua, Kuanyin. Good peaks. Long talk by Chinese YL, peaking over Moscow. F 1502 20/11
1287 R Kompania, probably Syktyvkar, northern Russia. ID. W 1443 20/11
1386 UNID Chinese. No IDs or //s found. Long Chinese YL talk. F 1700 20/11
1467 HKLN KBS, Mokpo. Presumed with Korean talk and chimes at toh G 1554 20/11
1467 TWR Bishkek, Kyrgyzstan. ID in Kyrgyz. G 1600-1700 20/11
1467 IRIB Qom. Persian music and OM talking in Farsi. G 1700 20/11
1476 R Thailand, Lamphun. Presumed with Thai pops at 1542, killed by ORF sign-on. F/G 1600 20/11
1494 Xinjiang PBS, Urumchi // 5060 W 1510 20/11
1521 CBS Changchih. Chinese music before CRI Urimchi sign-on // 603. F 1355 20/11
1521 CRI Urumchi. "Govorit Kitaya" Sign on at G 1400. 20/11
1557 WYFR, Kouho, Taiwan. Usual American religious rant. G 1400 20/11

So, it was a reasonably successful trip and we plan to try a few more DX trips in the near future when conditions improve - hopefully the next one being in December.

Good DX!

John Faulkner & Tim Bucknall

Hi

1540 khz Friday 2345z station in Chinese language on 1540 khz clear, almost certain to be CHIN-1540 Toronto running a programme in Cantonese at that time.

1570 khz Spanish female talk show at 0815z today, very loud around 0830-0850z but no ID, mentions of "migrantes" and "Mexico", no advert heard ; most certainly XERF-1570 La Poderosa.
Rare musical intervals really sounded Mexcican
Will finally enter it in my log, though no ID, what else could it be anyway ?

1600 khz weak ethnic-sounding songs at 0830z, too weak.

Cheers de Pat

1540 KXEL Waterloo IA. Booming in around 02:00, equal CHIN. G 0200 30/11 JF

I don't need to tell you how pleased I am to be able to report reception of KBRW. I was alerted to this thanks to Ken Baird's when he received it in SW Scotland yesterday. On checking 680 yesterday afternoon I could not believe I was receiving a carrier which was strong enough at times for very weak audio. So today I moved the ewe antenna so it pointed to the north. Needless to say reception was far from good and only brief snippets of audio were possible, but it was sufficient to hear that it was in parallel with their web stream for the best part of an hour.

I will post a more detailed account and recordings shortly.

Good DX!

Topic: 1725 Message: 1725

680 KBRW Barrow AK. Slightly better reception today. NPR Morning Edition. Weather with Glenn Hoffman in Barrow, sponsored by the Power & Brown law firm (in Bethel AK). NPR jingle. Christmas song "Here Comes Santa Claus" interlude followed by the NPR Economic Report. W 1619 02/12 JF

1420 WOC Davenport IA. ?Newstalk 14-20 WOC Davenport-Quad Cities? ID, still audible at 10:00! W 1000 02/12 JF

1470 CJVB Vancouver BC. Chinese music to toh then three pips and usual lengthy OM ID W 0600 02/12 JF

A better signal from KBRW this afternoon: More audio heard and in // with their web stream. For the record, the carrier peaked at -93dBm on a few occasions but averaged around -105dBm to -110dBm for much of the time between 14:45 - 17:30, giving occasional hints of audio at other times.

Oddly, not a lot else to be heard this morning. Conditions seemed quite poor, but CJVB and WOC came through. I'm pretty certain of 1410 CFUN again at 06:00, but a full identification from them continues to elude me.

Good DX!

1727. Taiwan on MW ??

Yahoo group: skywavesmw

Hi

At 1505 utc, I tuned to 1557 khz with my indoors Wellbrook 1530 turned to 40 degrees (NE).
When France Bleu Nice was its lowest, I could hear an English man talking with an American accent and I wondered if by any chance it could be WYFR from Taiwan.
The fading was frequent and fast ; I mean the signal resurfaced very often but only for a few tens of seconds, sometimes less.
It was what I would call a "fast-cycle " fading.
I searched feverishly for any SW parallel frequency to check it out and my old version of WRTH (2007) proposed 15210 khz.
I went there and there it was : the same voice, with a distinctive special audio signature.
But as I frantically went to and fro from 1557 to 15210 khz, I felt frustrated as the snippets or truncated sentences heard on 1557 did not allow to ascertain that these were the same programme on two channels.

At some point I even came to the conclusion that they were not synchronized.
At 1530 utc there was a clear Family Radio ID on 15210 but when I went to 1557 the desired signal had shamelessly taken a holiday.
The programme ended on 15210 long before the TOH, say around 1545utc.
1557 khz was at that time plagued by UK stations as sunset was drawing nearer.
WYFR after 1530 broadcast what they called Open Forum on 15210.

So what I'm left with is : on the yes side :the voices were really identical.
On the nope side, the programmes did not seem really synchro.

It seems so unbelievable to me that one could get a MW from so far away with an Icom R75 and a Wellbrook ALA1530 INDOORS !!
Is it a certain fact that this WYFR stuff is not relayed by, say, Baltic Waves in LTU ??

All the same my overall feeling is that I got myself a real WYFR signal on 1557 khz..

Now if we try to rationalize , I often get KVNS-1700 with a nightly 1 kw power at some 8,500 km from my QTH; why couldn't a 300 kw signal travel from Kouhu to my doorstep ??

Sorry for that boring speech, any comments welcome.

Pat

Conditions were not exactly exciting here either Patrice. This is very odd considering the conditions remain very quiet.

I have already deleted my overnight Perseus recording because there was nothing to report.

Yesterday I had poor west coast reception from CJVB, not to mention KBRW on 680 but these were the highlights. Regular east coast North American stations were weak and sparse.

Good DX!

This one can put in a hefty signal some days. I would imagine you probably did have Taiwan. The American presenter usually speaks in a very slow voice. If you hear the parallel then this would be without doubt.

It's still a great catch. Look at the distance!

Cheers

Hi

Very weak signals here and there till 0930utc.

1700 KVNS Brownsville with Hey Jude at 0655z.

1010 CFRB latecomer today, later mixed with other station (WINS ?) .
One of them with talk about bowels disorder ; guess that wraps up breakfast for today.

1540 KXEL still no ID but ABC News so as no other night stn carrying ABC Nx on this channel....

780 WBBM Chicago, nice ID at 0920z.

660 WFAN briefly out of the murk at 0915z then drowned again.

Last night (Wednesday) in the wake of my logging Taiwan for the 1st time on 1557 khz, I noticed that Benin was strong on 1566 in French and vernaculars. Nagpur also mixed some slow sitar pieces from India

Cheers de Pat

1732. 1584 khz

Hi

This 1584 khz is a very mixed-up/confused channel from here in Northern France but last night I heard lingering traces of Hindi music (around 2100-2200 UTC).
I don't think this was really India as they have only 1 kw facilities lined up on that channel according to my documents.
So there should be a West European station broadcasting that type of music. Does someone know who it is ?

I also heard London Turkish Radio at the same time in Turkish with talks.

Many Thanks.

Pat

1733. Far East DX Trip - 11-12-08

Yahoo group: skywavesmw
Date: 2008-12-13 17:10:53 UTC
From: John Faulkner
Topic: 1733 Message: 1733

A second DX trip took place at the same Derbyshire Dales location on Thursday 11th December. Due to dreadful traffic problems (and my own lateness getting up that day) we were not fully set up until 14:20.

Conditions seemed promising with 1521 China at good levels during our journey. However, after getting set up we thought conditions had suddenly deteriorated, but we put it down to the beverage being slightly too far to the north at 35 degrees. We wondered if the signals were arriving from a slightly different angle this time.

We have already planned to use a different location next time which has a more suitable 50 - 60 degree direction.

Carriers:
279.000 BR, Minsk
279.002 Turkmen R, Ashkabhad
279.003 R Rossi, Yekaterinburg
279.006 R Rossi, selenginsk or Gorno Altaysk
679.999 KBRW Barrow AK @14:20
680.000 Russian beacon

Audio!
531 Zheijiang PBS, Jinhua, CC om & IS under faroes 14:30
531 R Mayak, Cheboksary // 549 14:30
558 Xinjiang PBS, Urumqui, Uighur Om tlk & IS under Gollos Rossi Via Spectrum 14:55
567 R Rossi, Volgograd 14:30
576 R Mayak, 3 listed, all far east! 14:30
585 R Rossi, Perm 15:00
594 R Rossi, Izhevsk 15:00
612 R Mayak, Petrozavodsk 14:30
648 TWR, IS Under BBC. Tajikistan? 14:58
747 ORTAS, Syria (holland off) poor xf spain 14:55
765 R Rossi, Petrozavodsk 15:00
783 ORTAS, Tartus,Syria, OM ID 15:00
999 VOR, Grigoriopol, MDA 16:00
1035 Russian religious, Tallin 17:00
1413 CRI RR px, Grigoriopol 14:30
1449 R Mayak, Monchegorsk 17:00
1467 TWR, Bishkek, Kyrgyzstan xf Morocco All afternoon
1476 R Thailand, Lamphun. Until 17:00
1521 CRI, Urumqui, in French 13:30-14:00, strong on the car radio!
1557 WYFR, Kouhu 14:30

Once again there were some less common Russian signals to be had.

We wondered if Zheijiang PBS 531 and TWR 648 had been logged in the UK before?

Also, is Tajikistan the loction for the TWR station on 648?

Good DX!

Tim Bucknall & John Faulkner 11-12-08

I don't know of TWR on 648 kHz. A feed error in TJK would be possible, but it has been on big upper split lately; I see a carrier now at 1500 on 649.6 kHz.
This is a mystery.

From: John Faulkner
Topic: 1734 Message: 1735

Hello Mauno.

Thanks for this. Our TWR interval signal was virtually spot on 648. I don't know who 649.6 could be.

To be perfectly honest, I don't understand much about far eastern DX so Tim takes the helm when we go out DXing this part of the world. He has just been telling me about Bishkek 1467 who occasionally mistype the frequency and end up on 1674, etc. I had no idea things were this haphazard out that way. All very interesting!

Just to update the loggings on our DX trip on November 20th, we have a few additions which I will include below, but the most interesting one is a very tentative JONR Osaka on 1008, heard at 15:00. Unlike many other Japanese stations, this one is listed as broadcasting up to 18:00 hours. What we heard was so weak and far behind Holland/Taiwan that it is impossible to be certain, but the carrier measurement / sign off apparently match that of JONR. It's one for next time - when we must make sure we arrive BEFORE the Japanese stations sign off! :0)

Cheers

John

November 20th additions:
189.000 R Rossi, Belogorsk (under Iceland) 1500utc
963 R Twoje, Poland (3 low power txs w/ echos) 1500
1134 R Mayak, Murmansk 1500
1134 CNR 1, 1500
1377 CNR1, //1134 1500
1449 R Mayak, Monchegorsk 1500

Yes, that's two DX trips in a row without being accosted! ;0)

On a slightly more amusing note: There were two other cars parked in the spot as we arrived, but the moment we got out the beverage wire, earth rods, etc. and ran out the feeder, both drivers shot off in haste!

Unfortunately, the sun was at just the wrong angle and the entire beverage wire, as thin as it was, could clearly be seen reflecting the sunlight along its entire 1/4 mile length as you drove past it in a south-westerly direction. People would certainly have seen it.

No doubt the police will come and have words with us sooner or later, just as they did when I was hilltopping recently on 2m. It was difficult enough explaining amateur radio to the young officer who was quizzing me about the 2m whip on my car. He said he had never heard of amateur radio (though I didn't believe him). Explaining the intricacies of a beverage antenna would be quite a challenge.

Cheers

John

1747. Fw: [QRP-L] RE: Electric fence wire for HF antennas ?

Yahoo group: skywavesmw
Date: 2008-12-26 10:01:47 UTC
From: brian russell
Topic: 1747 Message: 1747

John,
There have been a number of postings of late week on this subject,
in particular the use of the ' polycord ' type of electric cattle wire
(polythene cord with wire strands woven through) very tough and possibly
easier to cope with than wire.
The downside is you cant solder connections but ' chocolate block '
connectors are fine.
I have even fallen victim to the ' live ' variety on walks hi!
72, Brian, G0NSL-QRP.

Sent: Friday, December 26, 2008 1:23 AM
Subject: RE: [QRP-L] RE: Electric fence wire for HF antennas ?

I've used steel fence wire, the galvanized version, 17ga, for years... many antennas have been up
for many years without requiring any maintenance. I've have 600- 800 foot lengths hung for beverage
antennas, and 10 m dipoles..
have compared side by side with copper, and not been able to measure with an S meter any difference.
However, I have not had the longevity with copper. It seems to stretch, and corrode, over time, and
this is in a very dry yet windy area. So flex and corrosion usually isn't an issue. The galvanized
steel will hold up under ice load and wind load better than copper, Unless the copper-weld is less
than a year old, any older, here, and it becomes a toss, two or more years, steel wins hands down.

John,
I caught up with George before Christmas and outlined your thoughts
on portable sites in Derbyshire.
Today he called me on the air and said he has done some listening on his
current long wire antenna (500m !!!!) and listed the results.
He will contact you direct via Skywaves regarding this subject.
A Happy New Year to you,
72, Brian, G0NSL-QRP.

Hi Brian,

If its the one I'm thinking of it is for the Part 15 experimenters who run beacons & broadcasts on 160 - 190 Khz & the American Medium Wave band. There is also an allocation around 13.5 Mhz too & Band 2 is available so long as you don't exceed certain feild strength limits.

Here might yeild some more results http://www.lwca.org/ . I've lost days researching this & been green with envy about the fact they can run their own beacons & broadcast stations.

1760. Re: [skywavesmw] *** VIRUS ALERT ***

Yahoo group: skywavesmw
Date: 2009-01-13 23:16:13 UTC
From: John Faulkner
Topic: 1759 Message: 1760

Further to my last message.

An attack was made on the Skywaves site sometime in the last 24 hours. Initially the alert came to me by a visitor who uses the Google Chrome browser. Google Chrome popped up a message which said the Skywaves site had been infected.
I immediately installed Google Chrome to check but did not initially pop up the same message. When it did, the Skywaves website continued to work fine on Firefox and IE7, but Firefox started reporting the problem an hour or so later, then IE7 caught up shortly after this.

Both Google and Enom have emailed me regarding the infection and Enom have threatened to blacklist skywaves.info.

On checking the Skywaves site we discovered intrusions in several html, php and htaccess files which included a redirection to sites containing malware. When I loaded the Skywaves site I saw two messages: A popup recommending the use of Antivirus 2009 (do not attempt to install this - it has nothing to do with AVG) and a virus warning from AVG. As far as we have been able to tell, there is no virus anywhere on the server or within the files.

Skywaves emails are not affected.

This evening, we have gone through all Skywaves files with a fine tooth comb and removed all the dubious links. We believe the site is now clear and thus it has been reinstated. No viruses or malware was found on my PC. We should now be free of the infection but please let us know if you see any suspicious messages.

Note that the Skywaves site will still be blacklisted by Google and possibly other search engines for some time to come - possibly weeks. This is normal until Skywaves passes an inspection.

John

1761. Skywaves Chat

Yahoo group: skywavesmw
Date: 2009-01-13 23:37:47 UTC
From: John Faulkner
Topic: 1761 Message: 1761

A little more detail on this now.

Because of the aforementioned website infection, we have decided to discontinue Skywaves chat. The new Skype chat service is up and running and has several members already taking part. This is a secure system and you can ensure you only receive messages from trusted members.

All members are welcome to join us in the FM & TV DX Chat and you can do so by downloading and installing the Skype software at www.skype.com

If you have never used Skype, think of it as mIRC but with lots of additional useful facilities. Many people use Skype as an alternative to the telephone but we have simply taken advantage of its chat facility. Skype puts Shoutcase to shame by allowing the streaming of audio and video to other users. There is no setting up as with Shoutcast. You just need to have the audio going into your computer's soundcard to stream to other users online. This will be very useful during DX openings. You can also transfer files.

A word of reassurance: When I suggested Skype to one member he politely told me he would never install it because of the spam he used to get. Just to assure you that YOU control the traffic in Skype in the security settings. YOU choose whether you accept messages from 'any' user, or just your chosen 'trusted' users, thus stopping unwanted messages or advertising. My own account is 'open' but I have only received two such messages in the last few months. If you leave your account 'open' you can always block any unwanted users.

A medium wave chat and MW DX Cluster has also been running very successfully for the last few months.

Join us by connecting to:

"Skywaves FM & TV DX Chat"
"MW DX 1"
"Mw Dx Cluster"

We look forward to seeing you there.

Alternatively, just email me your username and room choice/s and I will add you.

Skype is a standalone service and is not linked to Skywaves.

Cheers

John

Hi

590khz 0555z country music then clear ID VOCM (NL CAN)

670khz 0610z US Station probably WSCR Chicago.

Regarding 1140 I often (but not today) have 2 conflicting stns on that channel , one in EE and one in SP.

The English speaking one seems to be CBI as what I dimly perceive is current affairs and no commercials; I think I once heard CBC but not all sure.

The Spanish one is probably Cuba , Enciclopedia or Cadena Habana, can't be certain though.

Cheers de Pat

There's also WQBA Miami. That's the usual Spanish here on 1140.

Conditions here are dreadful, while DXers only a short distance further north of here are hearin glots more. I can only put it down to the infamous 'midwinter anomaly'. Even the easy east coasters have been poor in recent weeks.

There have been very few bright spots:

1280 WNAM Neenah-Menasha WI. "It's Impossible" song then promo "Wake up with ??? and friends -- a great way to start your day on 12-80 WNAM" then Lionel Richie track F 0330 29/12 JF

1380 XECO 13-80 AM Romantica, Iztacalco. Thank you to Andrew Brade for the transcription: "Est?s escuchando XECO, Rom?ntica, AM M?sica. 50,000 vatios de potencia ... desde Radio Valle de M?xico, Avenida Paseo de la Reforma no. 56, M?xico, Colonia Ju?rez, tel?fono 5... 6606" W 0600 11/01 JF

1390 WRIG Schofield-Wausau WI. "This is 13-90 WRIG Schofield-Wausau, a service of Midwest Communications" W 0300 14/01 JF

Good DX!

Yeah, action is dull here that as a side-hobby I started collecting the callsigns and locators of ham stations in the 160m band (sideband, CW and PSK31) only logging the ones that are more than 2,000 km from my QTH.

Already heard Japan twice in broken morse and a dozen Americans in LSB Phony including Nebraska and Iowa.
Farthest to the west was YN2N in Nicaragua.
There's apparently no connection between the present state of the MW band and the current openings between 1800-1850 khz where most of the DX action is centered.

Cheers de Pat

There's also WQBA Miami. That's the usual Spanish here on 1140.

Conditions here are dreadful, while DXers only a short distance further north of here are hearin glots more. I can only put it down to the infamous 'midwinter anomaly'. Even the easy east coasters have been poor in recent weeks.

There have been very few bright spots:

1280 WNAM Neenah-Menasha WI. "It's Impossible" song then promo "Wake up with ??? and friends - a great way to start your day on 12-80 WNAM" then Lionel Richie track F 0330 29/12 JF

1380 XECO 13-80 AM Romantica, Iztacalco. Thank you to Andrew Brade for the transcription: "Estás escuchando XECO, Romántica, AM Música. 50,000 vatios de potencia . desde Radio Valle de México, Avenida Paseo de la Reforma no. 56, México, Colonia Juárez, teléfono 5. 6606" W 0600 11/01 JF

1390 WRIG Schofield-Wausau WI. "This is 13-90 WRIG Schofield-Wausau, a service of Midwest Communications" W 0300 14/01 JF

Good DX!

patrice.privat wrote:

Hi

590khz 0555z country music then clear ID VOCM (NL CAN)

670khz 0610z US Station probably WSCR Chicago.

Regarding 1140 I often (but not today) have 2 conflicting stns on that channel , one in EE and one in SP.

The English speaking one seems to be CBI as what I dimly perceive is current affairs and no commercials; I think I once heard CBC but not all sure.

The Spanish one is probably Cuba , Enciclopedia or Cadena Habana, can't be certain though.

Cheers de Pat

I can't complain, cx were quite good yesterday morning and the night before.
Signals dominate from the midwest
Interesting is 1510 WRRD it shuts down 2300 UTC and is quite good audible
before that in SS. Last time I had it was in Nov

This I got in the last few days,
quite a few new ones were found in the 1100-1400 range
The last 2 days KFAN showed up often during mid-morning pushing aside WBBR

and I still have not set up my beverages ...

Oh yes. The X band conditions never seem to have any connection with the rest of MW. This has long been noted. I would just love to know what it is that makes reception so different between the North Midlands to a location 100 miles - or even as close as 50 miles to the north of here.

A few uncertainties are good though, because if conditions were so predictable many of us would lose interest very quickly. 'The unexpected' happens quite often in this hobby.

Wetter soil (better ground) ?
Less obstructions? (hills etc)
Better path to the sea?

Poor soil? (Very rocky and lots of clay).
Less Obstructions? (The Peak District National Park and Derbyshire
Dales right next to me to the west)
Better path to the sea? (Er, furthest point from the sea, right in the
very centre of England!)

Hmmmm. :-(

I couldn't be sure about their particular soil quality, etc. but I am particularly thinking of DXers in the East Yorkshire and York areas who often hear plenty when I do not.

Actually, thinking about it, there's more to this.

At the moment I am listening to what I presume is WRRD on 1510. It is totally obliterating WWZN with Spanish OM talk. If conditions are this good around 23:00, why should the deterioration happen pregressively thereafter? This would not tie in with soil, water or hills.

The mystery deepens!

1773. WRRD now in Ashfield!

Yahoo group: skywavesmw
Date: 2009-01-14 23:22:45 UTC
From: John Faulkner
Topic: 1762 Message: 1773

Further to my last post I can confirm that my Spanish station on 1510 is indeed WRRD in Waukesha WI. I have just been listening to the phone in and commercial break. Everything in // with WRRD's web stream.

AMDX had recently reported that they were using their day power (23kW) on this frequency.

A personal first! :-)

Good DX!

John

Yesterday at 2300 UTC they shut down, FCC list them for critical hours, not for night

But just now I am hearing them at 2330

WWZN is often weaker than usual, since the midwest is prefered

--
about different propagation night/morning

each night I get 620 CKCM in good quality, while 590 is much worse.
Each morning 620 is lousy while 590 is good,

Now tell me why? :-)

The last mornings the midwest is quite good,
this morning WHIO and WHBY I heard the 1st time

CFRY 920 came in strong, but no ID at TOH,
whenever I hear them no ID, this is a tough nut

1775. Skywaves Website - The Future

Yahoo group: skywavesmw
Date: 2009-01-15 12:49:19 UTC
From: John Faulkner
Topic: 1775 Message: 1775

OK, it's 'cards on the table' time.

The Skywaves site is hosted on the Tribal CMS which we installed several years ago. There have been no updates and so the system needs updating to either the latest version or something which offers more funtionality. There are now several excellent options we can choose, all of which would receive regular security updates.

I have some questions. Is it worth the effort? What value does the Skywaves site have these days? It has lots of pages and contains lots of information but how valuable is that information? We know we could do more.

I would like to see the site developed so members can have their own blogs, but will people use it? If we went with an installation like WordPress it would give us greater flexibility and offer much more in the way of publicity.

Next month our out-of-date hosting package expires *permamently* and we have to move to a new one. I am honestly wondering whether to bother.

I expect this message will fall on deaf ears yet again, but if anybody cares to express their views on whether we keep the website, please give a simple yes or no as soon as possible.

Fact: If the Skywaves website goes, there will be substantially less publicity for the Yahoo groups and they could run down and maybe even expire too.

Excuse my bluntness, but what really pisses me off is that a few of us have spent a lot of time behind the scenes building the website and keeping it going, only to discover that some bastard has hacked into it and infected it with malware, thus creating a lot of problems for us. I am determined this will not beat us. With almost 7000 unique visitors a month to the site I think there is still a lot to play for.

So, over to you. What do we do?

John

Hi

Well, I like Skywaves as it is.
I tend to send more postings to the MW in the winter months and MW DX has only recently become
one of the dominant passions in my multi-faced interest in radio.
The TVFM DX site I only use and visit from April to September when there's a chance of Sporadic action
as there's no way I can get trop here it seems.
I would certainly miss them if they were to kick the bucket.
Where else could I get the experts' opinions about my logs ?
No matter the sophistication of the gear and everyone's individual talent for DX, this cannot be a lonely hobby ; most of the fun stems out of exchanges and combined expertise.
Our hobby (at least in France) is so thinly spread (for the masses radio means the round-the-corner- FM jukebox) that if we cut the ties with the other DX freaks, we'll be even more isolated and misunderstood as before.

Keep the stove burning is what I'd say.

Cheers de Pat

hi John

I for one would hate to see the demise of skywaves. It has been a great help to me and I would sadly miss it. I do not have sophisticated gear so enjoy reading what dx others are getting.
I know I do not get on the chat room as often as I should but my work involves me being abroad a lot and its really only then that I can join in with the stations I hear. Though they are only "locals" where I am they are of interest as exotic dx that will probably never be heard in UK
It seems a shame that our site might now end because of some senseless sod. We are a small group going about our hobby without upsetting anyone , so why would someone set out to wreck things.
Don`t let them win John, keep the club going.

John,
I would like to endorse Edward's comments on Skywaves.
Though a recent newcomer to the group it has provided many pointers to
enhanced MW reception for myself and I would miss the postings,
especially as only having a ' dial - up ' Internet connection precludes me
from chat room participation.
Whilst I appreciate that it takes up time would more moderation help,
at least in the short term rather than a complete demise ????
Regards,
Brian, G0NSL-QRP.

Yahoo group: skywavesmw
Date: 2009-01-16 18:24:44 UTC
From: John Faulkner
Topic: 1759 Message: 1781

I have received several messages today advising that the virus warning still exists. Having checked the code I can confirm the malicious scripts have reappeared.

We are unsure how this has happened since we removed the scripts methodically and checked that the site security was as tight as it practically could have been. Clearly the hackers are one step ahead and have created the means to reinfect the site.

It is therefore with regret than the present "Tribal CMS" version of the Skywaves site has been removed permanently.

Thank you for all the comments and PMs received over the last 24 hours.
I will reply and comment in due course.
I have informed Enom of the re-infection in order to protect skywaves.info

Next week we hope to start building a new site using a different CMS - a CMS which is continually being develped and will therefore will offer better security. Effectively, this means the Skywaves website will be starting from scratch regarding search engines, etc.

For your peace of mind - my own computer does not seem to have been affected by anything unpleasant. The malicious links inserted into the Skywaves website did not appear to be viruses themselves but just links to websites which sold software and/or were sites which may have contained viruses themselves. In the meantime some of you might want to check your systems for malware. Use something like Adaware SE personal or SpyBot S&D. The free versions are more than adequate for this. I do not think there is any need for anybody to worry but you might want to air on the side of caution.

Apologies for any inconvenience.

John

Description

msvcr71.dll is a module containing standard C library functions such as
printf, memcpy, and cos. It is a part of the Microsoft C Runtime Library.

Click to run a free scan for msvcr71.dll related errors.
<http://www.liutilities.com/products/campaigns/plib/rb/?s=msvcr71.dll>

Recommendation

*Not a critical component, but see the information above before
disabling it.* It is highly recommended to *Run a Free Performance Scan
<http://www.liutilities.com/products/campaigns/plib/sp/?s=msvcr71.dll>*
to automatically optimize memory, CPU and Internet Settings..

Hi Michael

If you are running Clamwin and AVG at the same time, it is a good idea to uninstall one of them. Running two AV programs at the same time can cause a clash which could leave you without antivirus protection.

Hi. Not being a PC geek at all, I used the WHICH magazine free CD and its free CLANWIN as my anti-virus I do seen to get frightening messages coming in, like the blue tri-angle, and free scans and other bits of info, I also have AVG free edition, but the CLAMWIN just sits in the back ground doing a fine job, my lastest pest is the MSVCR71.dll what's all that about, as I said not really up to PC talk in any format. Mike.

Paul,

not just a good idea, it is usually essential not to have two AV programs running at the same time. Confusion is guaranteed. Besides Malwarebytes, I can warmly recommend Norman's malware cleaner (www.norman.com), a very fine free tool made in Sweden. Just download the software, start the PC in safe mode and let it work. Very effective, saved me quite a few times.

Hi Michael

As far as I can tell your computer may have been infected by Win Antivirus 2008 or 2009 or something similar, this is a bogus antivirus program that chucks out false virus alerts in an effort to get you to buy their product and remove the 'infection'.

Download Malwarebytes http://www.malwarebytes.org and run a complete system scan, this should remove the problem.

Paul

From: Michael Rae
Topic: 1759 Message: 1790

Hi Everyone who replied re MSVCR71.dll, I clicked on the links and downloaded as recommended, SPEED UP MY PC THE SPY DOCTOR REGISTRY CLEAN UP etc my wife said I'm easyly led, thing is the PC is now running even slower, whereas it took 45 seconds to load it now takes about 3 times as long, I am getting frozen pages, virual memory low,and its in a right mess, I took off CLAMWIN as you said, and left AVG, surely even these sites are no different than the rest, they find 136 or 259 prblem, which AVG said there was none and try to get you to buy the full edition, ALSO once again trying to hit FINISH is a problem, jammed panels again, that I am thinking of removing all that was recomened, BTW the PC start gets to my short cuts and thereafter the panel MSVCR71,dll is still there did this messing OS in fact get reinstalled, or have I just downloaded some more free scans? I am going to stick with AVG it has saved me before! The one good thing that has happened is the mouse pointed has stopped dropping. Mike M3EMB

Hi Mike,

It sounds as though you do have malware problems, it is also possible that your installation of AVG has been damaged, some malware is able to disable any security programs you have installed. You could try removing AVG and installing a fresh copy http://free.avg.com/

MalwareBytes which I have suggested twice is one of the few programs that is capable of removing all traces of malware, it is certainly able to remove the likes of win antivirus 2008 which other cleaning tools have a tendency of leaving parts behind. www.malwarebytes.org From what you have said, you have been infected by this or one of its derivatives.

It also sounds as though the invites to buy the full version could be generated by the malware, to my knowledge, AVG has never recommended buying the full product to remove anything it finds.

A further thing you could try is an online virus scanner, BitDefender is a very good scanner

http://www.bitdefender.com/scan8/ie.html

Hope this helps.

Paul

If you have virus and malware, I really recommend you Kaspersky Internet Security. I used it when I had Windows and that program found so much more crap than ex. Norton Internet Security did.

Until 1900 I tuned to 1701 to watch the Australien carriers.

Then I could hear weak audio of KBRW, a quick tune to 780 at 1945 gave weak
audio as well, not sure if it is from ALS or already from CFDR

Below my logs of the last 7 days.
Conditions have been excellent the last few days, many new ones were heard, and still lots of recordings need to be analyzed.

This morning I finally heard KNX-1070 once again, I saw the carrier and then finally heard the weak audio. The same with KOA. Otherwise many from the midwest and further west.
Now at 2310 UT CFRW-1290 blasts in, quite unsual at this time.

CFRY tricked me for a long time, I never got an ID at TOH, this morning during live DX I finally found out why, ID & news were at xx:05

1250 CHSM Steinbach MB. Woodwind piece in // CFAM 950. Good peaks! G 0802 24/01 JF

1250 WSSP Milwaukee WI. “WSSP Milwaukee” heard in pile-up W 0800 24/01 JF

1480 WLMV Madison WI. La Movida and WLMV 14-80 ID heard after Mexican music. Personal First! W 0804 24/01 JF

1490 WBAE Portland ME. Top of hour ID with brass fanfare “1400 WVAE Biddeford, 1490 WBAE Portland” mentioning the 1400 call but too

weak in noise. W 0000 24/01 JF

1500 KSTP St Paul-Minneapolis MN. “This is Talk Station (?)Fifteen Hundred KSTP St Paul Minneapolis, stay tuned ...” F 0000 24/01 JF

1670 WTDY Madison WI. “From Madison 16-70 WTDY’s news centre, this is an ABC News Update” F 0800 24/01 JF

Like Paul, I'm still working through my overnight recordings so I hope there may be another station or two to add.

Conditions improving further. CJOB, CFRY, CFAM, CBR, CKMX and CHSM heard with fair or good peaks! KBRW also in again this evening - presumed this time as limited programme content was heard and their webstream wouldn't work for me - suspect a WMP issue.

Still nothing from 1140 CHRB. Unusual considering the strength of the other Albertans / Manitobans, but I heard a second English talker on 770 - suspect CHQR, plus C&W on 790, which could have been CFCW. Several other mysteries too including a W call on 920 which I cannot trace - sounded like "WYNS/WYSS Newstime". I will post this to RealDX, plus an ESPN station and tentative "Mile High Sports", both on 1600.

Good DX!

John

1809. Mid Winter Anomaly off ?

Yahoo group: skywavesmw
Date: 2009-01-26 10:13:00 UTC
From: patrice.privat
Topic: 1809 Message: 1809
Attachments: 1 described; binary payloads are missing from this source WARC

Hi

Is the mid-winter anomaly gone for good ?

This morning the propagation was outstanding with at least 21 channels alive between 570 and 1400 khz !

Did not have the time to try the X-band.

2 sure new ones :

760 khz WJR Detroit with several IDs.

750 khz CBC Radio Newfoundland , got to be CBGY Bona Vista Bay NL

other tentatives :

680 khz Fox Radio News competing with Toronto (what station it was, I don't know).

830 khz think I heard WCCO Minneapolis but later I heard an ID with "Pennsylvania" so it's possible that WCCO and WEEU were struggling together.

780 khz Country music (CFDR most likely)

700 khz 2 competing stations.

840 khz going towards 0600 utc, there was a discussing about Obama swimming for 15 years in Chicago politics and suddenly emerging all of a sudden on a national level, signal gone by the TOH.

More later this week I hope.

Greetings from Pat

Hi

*WLW clear ID this morning ; Cincinatti 700 khz 0730 utc.

*WSCR 670 khz no identification alas, but I know it's Chicago.

*WDHP 1620 khz back now (unheard so far this season) with BBC World Service relayed from the US Virgins, Fredriksted.

*CFTR in good shape on 680 khz from freezing Toronto.

Cheers de Pat (Beauvais)

1814. Catching a North American station on a European frequency

Yahoo group: skywavesmw
Date: 2009-02-01 00:27:24 UTC
From: John Faulkner
Topic: 1814 Message: 1814

It's down to luck and/or the combination of two factors:

1) The European station having a temporary moment of silence at the top of the hour.
2) Catching the North American ID while the signal is peaking.

I thought I would share some recordings with you which show recent examples of this happening where the North American was either mixing with the Europeans or was OVER THE TOP OF THEM!

It was this morning's reception of 720 WGN which prompted be to post a few recordings:

720 WGN Chicago IL: http://skywaves.info/mw/720-WGN-0500-31-01-09.mp3
1170 WWVA Wheeling WV: http://skywaves.info/mw/1170-WWVA-0700-23-01-09.mp3
1540 WCKY Cincinnati OH:
http://skywaves.info/mw/1530-WCKY-0700-23-01-09.mp3

As I type, 1080 WTIC is currently wiping out Spain!

Good DX!

John

1817. WRTH UPDATE FILE AVILABLE FOR DOWNLOAD

Yahoo group: skywavesmw
Date: 2009-02-03 16:07:54 UTC
From: (no author)
Topic: 1817 Message: 1817

WRTH is pleased to announce an update file for the Winter (B08)
International radio schedules is now available to download from:
http://www.wrth.com . The file is a pdf file and will require the free adobe

acrobat reader, available from http://www.adobe.com . The file is 8 pages
long and is approx 51kB in size.

Included in this file are updates for: Albania, Algeria, Armenia, Australia,

Austria, Benin, Croatia, Ecuador, France, Gabon, Germany, Guam, India, Iran,

Italy, Korea (Rep), Kuwait, Latvia, Lithuania, Malaysia, Philippines, Poland

Portugal, Romania, Russia, Taiwan, Turkey, Ukraine, UK, USA, Vatican,
Venezuela, Vietnam, Zambia and more.

We hope you find this a useful accompaniment to the printed WRTH.

Regards

Sean Gilbert, International Editor - WRTH and the WRTH editorial team.

If your 790 is heard prior to about 2200 UTC, then disappears, it could be "The Zone",

WQXI Atlanta: 20kW ND days, but their tight-directional nighttime 1kW
would never make it over there. Otherwise it could be WAXY Miami;
their 5kW nighttime DA does throw some power in your direction. --

1825. my qrm problem -latest

Yahoo group: skywavesmw
Date: 2009-02-06 13:31:34 UTC
From: Tim Bucknall
Topic: 1825 Message: 1825

Hi All,
Forgive the CC, but i know some of you have been following this
Just a quick update: a very helpful Ofcom investigator was round today, and
my qrm problem IS the infamous BT home-hub after all
his next step is to contact BT and lodge a complaint and get the Noisy PSU
replaced,
he's also begged the BT customer (on my behalf) to unplug the thing when
he's not using it (until the replacement arrives) - but the customer is
Elderly and seems to have forgotten this already

for 5 minutes this afternoon i had the band back- i swear it was as quiet as
Grayland with this thing off!
but eventually The Ofcom man had to allow the BT user to plug his home hub
back in and its back to the usual qrm hell again

the ofcom man did promise to phone the guy tonight to remind him to unplug
it, so i may be able to get an overnight session in tonight

feel free to forward this to UK qrm or anyone else suffering with this
problem

That's fine Tim. Please keep us posted with any updates.

I'm surprised it is the infamous home hub as the buzzing sound was quite different to the usual Home Hub data type sound I have heard from this equipment.

If I remember correctly, BT will be required to replace the offending equipment with a different one - one which doesn't cause interference. So it looks like you could be back in DX business soon.

For the benefit of the members, I was over at Tim's trying to track down this interference and it appeared to be coming from equipment on the telegraph pole across the road, but we did not know if the interference was coming directly from this or was being radiated from another point. The noise generally registered at S9+20 to +40 on Tim's receiver, with only a few points on the dial where it was 'slightly' less of a problem. The noise was reminiscent of a noisy psu in a street lamp, i.e. a rough, raspy 50Hz.

Tim, you could call round to visit the gentleman to befriend him and get him on your side. You could ask if he minds unplugging the box at night or when he's not using it.

Fingers crossed this is rectified soon.

John

1827. Late delivery of WRTH

Yahoo group: skywavesmw
Date: 2009-02-07 09:49:27 UTC
From: Sean Gilbert, International Editor - WRTH
Topic: 1827 Message: 1827

I have noticed that quite a few people are/have had problems with the delivery of WRTH2009. The publisher is also aware of this and has asked me to send the following explanation:

"We are very sorry for the delay in shipping of WRTH 2009 by Amazon.com. Copies of the book reached the Port of New York on December 16. They were trucked from there in a sealed container direct to the distribution center in Virginia, USA. They should, and could easily have been, released from there before Christmas. For some reason they did not get released *officially* until January 15. We think they were actually released on February 2.

We are aware that the late delivery to Amazon has also had an impact on readers and clubs all over the world who ordered from Amazon.com or from websites who do so.

This is the worst distribution performance ever in any country for any edition of WRTH. Next year we will be using a different distribution system.

Nicholas Hardyman
Publisher
World Radio TV Handbook

I can only apologise for the distribution problems from Amazon. You can order direct from our website http://www.wrth.com as well as your usual sources.

Hi

Again strong station in Spanish on 1140 khz this morning until 0740 utc.

I know many people have reported WQBA FL on that channel but although no ID was heard this morn, I still favour the Central American (Cuban ?) thesis as I heard no advertising at all which seems difficult to believe from a capitalist country. Programme mainly consisted in talks and phone-ins.
Was any one in Western Europe parked there this morning ?

All the same FL was available on 610 khz with an anglo station that must 've been WIOD.
Many thanks.
Pat

Hello Brian.

Yes, very nice to work you for the first time yesterday afternoon.

The new antenna is working very well indeed considering it is not quite finished. I still haven't cut it to size and it twists around the garden due to lack of room. It is a few feet on the long side as I haven't cut it exactly to size yet and I only threw it up quickly (Bodgitt & Scarper Ltd as usual) . The far end of it is wrapped around the TK brackets of my FM mast - far from ideal, so it should be possble to improve this to some degree. Curiously, the SWR is already about right on 80m, 40m and 20m, as it should be. The antenna should work well on 15 and 10 but will probably require an ATU up there.

This is the design:
http://one.xthost.info/gm0onx/5%20band%20Inverted%20L.pdf

Looking forward to working you again soon.

Cheers

John

John,
Ok on the antenna, the best ones are the ' lash up's ', tidying them up
or tweaking usually is the kiss of death hi!
Out walking yesterday so no radio activity.
72, Brian, G0NSL-QRP.

Hi all;
I am a new member on this forum as well as new to SWL and MW listening...I am located in Central Ohio USA and interested in learning more about MW DX'ing...I am using an ICOM R-70 as well as a RS DX-394.....my main restrictions now are a proper MW antenna as well as space.....I live in a Condo community and outside antenneas are not permitted so I am currently using a 33' sloper ant in my attic and have just received an 80' longwire ant that I intend on having my son install (I am in a wheelchair) in an L or U configuration in the attic in a N/S configuration as the sloper is installed in an E/W configuration both made by a gent on ebay that goes by the handle of lowbander....I am told that neither of these are ideal for MW DXing !!!...so I guess I need yet another antenna (Lol)---I have heard that Loop antennas especially made for MW are very popular and several different ones where mentioned to me on the Yahoo antenna forum.
I am looking forward to learning more and also making new friends.....

Hello Glenn and welcome to the group!

It's a shame when you have restrictions on aerials. I used to have such restrictions a few years ago so I know how that feels. I wondered if you have considered using an indoor loop or even an indoor ewe or flag antenna? Flags and ewes can work surprisingly well indoors but are less easy to rotate.

I am out of touch with loop antennas these days. My ALA1530 loop is long redundant since I discovered the excellent directivity of the ewe and flag antennas. You can find construction details here: http://www.dxing.info/equipment/ewe.dx For the flag, simply disregard the earth connections and link the bottom of the wires to each other with another length of wire (to match the top wire). This converts the ewe into a flag, which I generally improves directivity.

You can't beat the loop antenna for size though. Even small loops work surprisingly well. Some DXers have even been known to wind the loop antenna around the walls of their shack and so actually sit inside the loop!

Phasing a loop and a longwire gives excellent results in nulling out unwanted signals - often on stronger local signals too! Worth experimenting.

If anybody has designs for loop antennas, why not post them here or post a link?

Cheers

John

Correction: 1250 *WNAM* Bridgeport Michigan should have been *WNEM*.

From: buckeyeair2
Topic: 1836 Message: 1841

John;
Thanks much for the reply and suggestions....I had never heard of either the 'ewe' or 'flag' antennas....very interesting info and thanks for the link.....I have been studying up on Loops that various Co.'s make for MW listening.....I would think it would be a big improvement over what I now have to install a fairly large loop in my attic and mount it on a Rotator----I would think that a simple TV type rotator would work as the loop would be pretty light in weight. I will do some research on the 'ewes' and 'flag' desighns.....I am wondering if I can use the 80' long wire in a different configuration such as wrapping it around a piece of PVC pipe and standing it on end, it has 80' of wire attached to a 9/1 balun then 50' of lead-in coax with a PL259 plug on the receiver end...yes--?--no--?--as you can see I know NOTHING about this hobby as of yet but am willing to learn...
Thanks again and 73's
glenn (buckeyeair)

1842. Skywaves Website back!

Yahoo group: skywavesmw
Date: 2009-03-03 21:12:57 UTC
From: John Faulkner
Topic: 1842 Message: 1842

www.skywaves.info

The Skywaves website is now back online, but please bear with us while we get things together as we have decided to build the site online, rather than keep it out of sight until it was finished.

There have been numerous problems to deal with since the site was taken down, most of which are now rectified, but you will notice that pages are missing, broken or some night even be in a general state of disrepair. We decided that it was more important to get the site back on. You will be able to watch it all unfold before your eyes!

We welcome your input, particularly if you wish to have your own pages or blog hosted on the site - the new hosting package is huge compared to the last one!

Cheers

John

1843. What was I hearing ??

Yahoo group: skywavesmw
Date: 2009-03-04 21:26:46 UTC
From: buckeyeair2
Topic: 1843 Message: 1843

Last night at 0630 UTC I was listeneing to MW on my ICOM (without a proper MW antenna) and from my central Ohio USA location I picked up WMVP (ESPN RADIO) out of Chicago Il. on freq. 1000 then WLAC out of Nashville Tn. on freq. 1510 then scanning up the band I came across a station at freq. 1540 that was speaking Spanish or French (I don't know any thing but English) and I listened for close to an hour and could not hear any call letters at least that I could understand....the signal was very strong (S-8 or S-9) most of the time then it would fade almost entirely away then return again...was I hearing some sort of skip? I have not heard of any forieghn speaking MW stations in my area although I am new at this hobby. Any ideas?? Thanks

Hello Glenn.

Congratulations on your reception of WMVP and WLAC. Your station on 1540 could have been one of several stations. Have you visited this website?

http://www.topazdesigns.com/ambc/

It lists all the stations in the USA, Canada and Puerto Rico. Maybe of use.

Catching DX outside North America might be tricky since you already have so many stations over there which would block channels. However, during the evening you might notice some heterodyne tones on certain frequencies caused by European stations on frequencies which appear between your own 10kHz channel spacing. Europe (and most of the rest of the world) use 9kHz channel spacing. So if a European station was 1kHz off channel you would hear a 1kHz tone on the appropriate side of that channel. 2kHz off channel and you would hear a 2kHz tone, and so on.

Hope this helps.

Enjoy!

John

John;
Thanks for your reply and information....yes I had seen the sight that you mentioned and also another that lists all the various MW stations in the USA and there are 69 different stations scattered across the country that broadcast on 1540 khz....but it came in so very well that I presumed that it was some sort of skip from possibly Cuba.....I will listen again this evening to see if I can catch it again !!! (Lol)

Hello Glenn,

It could be CHIN. This gets out pretty well - it's even a regular over here in the UK. Whenever I hear it it seems to carry Chinese language programmes, but European languages are carried also, at least, according to their website.

Cheers

John

1848. Lost Recordings - A Request

Yahoo group: skywavesmw
Date: 2009-03-05 08:10:44 UTC
From: John Faulkner
Topic: 1848 Message: 1848

Does anybody have a copy of the medium wave DX recordings from the Skywaves website by any chance? They were lost when the site was hacked into.

I have backups of most of the recordings from recent years. It's the older 1980s recordings which I really need. Actually, I still have those here too but not in mp3 format. It means going through six old C90 cassette tapes and transcribing them all to mp3 again - quite a time-consuming task!

It's a pity the Wayback Machine doesn't stretch as far as backing up audio. It lists the recordings (below), but does not hold the actual mp3 files themselves.

Fingers crossed.

John

> to their website.

Whenever I hear it during my local morning it relays RAI-1 and is // to the
Italian RAI MW channels, sometimes CHIN comes in better than the original

Hi

Just back from a very pleasant trip in Scotland (Ayr, Stirling, Perth, Edinburgh).

This morning's session yielded :

1390 WEGP Maine , nice ID and jingle.
1470 WLAM the Oldies Channel ID
680 CFTR Toronto (UNID Spanish in the background)
670 WSCR Chicago
660 WFAN New York
1600 unid Spanish music
1400 CBC radio (CBG Gander)

cheers de Pat (Beauvais)

Same -Same last night.....I tried to listen today and got nothing but static...not even one of the three Ohio 1540 Am stations..(man I need to get a MW antenna !!)...there program schedule says that they will be broadcasting in English from 1:00 Am to 2 Am this (Thursday) evening....I will give that a try as well as listen to there streaming audio at the same time. That should at least verify what I am hearing.....

Hi

Had a station on 1690 this morning at 0700z carrying CBS news.
I'd be tempted to believe it's WMLB ; anyone knows of another CBS affiliate on this channel ?
The Greek station from Toronto was almost inaudible.

Thank you.

Pat

Hello

This morning I heard WTNI Biloxi MS on 1640 with political talks.
Also 1700 khz in Haitian Creole with Miami address commercials ; that must be WJCC FL.

I suppose the season is drawing to its end. Conditions have been rather bad here since Dec 15th.
All in all 46 stations from the Americas have been logged.

Cheers de Pat

Hello

Here are some videos of what I get on my eton e5 and other radio which is a pioneer vsx 817 with a dipole by my window

FM Band Scan on my main radio
http://www.youtube.com/watch?v=YMoU_mXK8pE

FM Band Scan on my eton e5 with tropo
http://www.youtube.com/watch?v=-3xTG7bsN4k

MW band Scan on eton e5 night time
http://www.youtube.com/watch?v=Lr53LTJfBBk

DAB Radio Scan
http://www.youtube.com/watch?v=4-F3aRp1-A0

FM on my eton e5
http://www.youtube.com/watch?v=ywQSHTB9vN8

MW Day time on eton e5
http://www.youtube.com/watch?v=8gmfkgYUZ5o

And another one in the other room on MW
http://www.youtube.com/watch?v=ri12O6K20sA

From: peter40blue
Topic: 1857 Message: 1857

I have just joined this group as I am going back to my roots of radio hobby, I have been licensed for over thirty years and my call sign is GMOPKF.
My station consists of a Palstar R30CC and two EWE antennas north/ south and east west respectively.
OFCOM have also just resolved BT line adapter interference that was affecting most of the broadcast band spectrum, the strongest interference was coming from the
consumer unit in the house, it has not a good start to my DX listening! However, all is now resolved

I am looking for transatlantic MW DX and would appreciate guidance on frequencies and times to listen. However, I know it probably not the best time of year.

Kindest Regards: Peter

John, I have just experienced the same problem from BT power line adapters wiping out the broadcast bands. However, I am pleased to say OFCOM supported me and instructed BT to hard wire the offending neighbours system. The strongest signal source was coming from the consumer unit wiring in our house!

1859. Transatlantic DX
